Richmond, Indiana 47374

Dear Mr. Stassin:

Re: Disposal of Waste Coating Materials

The Solid Waste Management Section of the Indiana State Board of Health has established a limit of 2 percent for solvents in materials which are landfilled. Materials containing more than 2 percent solvents must either be incinerated or sent to a reclamation facility. The liquid waste containing acrylic and epoxy moners and resins which are diluted with various solvents cannot be landfilled due to the solvent content.

The solid waste consisting of rags, empty ink containers and gloves partially saturated with liquid waste and waste inks and coatings are acceptable for landfilling. These wastes may be landfilled at the Western Wayne Landfill, operating permit number 89-1. Any necessary local approval must be obtained from the Wayne County Health Department prior to disposal of these contaminated solid wastes.

If, in the future, the solvent content of the liquid waste can be reduced or the waste solidified, the Solid Waste Management Section will be happy to assist you in finding a suitable disposal location for the waste.

If you have any questions, please contact Mr. Guinn Doyle or Mr. Johnie Baker of the Solid Waste Management Section at AC 317/633-6400.

Very truly yours,

Roland P. Dove, Director
Division of Sanitary Engineering
