Discussion w/ B. J. Hayes on Vapor Intrusion
8/13/03

① Formula for converting ppb to $\mu\text{g/L}$ or $\mu\text{g/m}^3$

$$\text{PPB} \times \text{MW} \div 24.45 = \mu\text{g/L or } \mu\text{g/m}^3$$

② Discuss risk level @ McDaniel residence for
non-drinking purposes

PCE = 87 ppb in ground water sample (1/2003)

B. J. calculates 10^{-5} risk level is 23 ppb for
PCE in ground water for non-drinking purposes
McDaniel residence exceeds by ~ 4 times.

$$\text{MW(PCE)} = 165.8$$
