Re: Actions for Reopening a Public Water Supply
After a Long Shut Down
IN2490550 Generations Grill

Below is a list of IDEM recommendations and requirements for a Public Water Supply system before reopening after being closed for a period of time due to the COVID-19 pandemic. Studies show that water will become stagnant after seven to nine days of standing still. *If you have any questions please contact your IDEM Field Inspector Joe Stapinski at (317) 431-6941.*

Recommended actions:

- Visually inspect system components to be sure all components are intact
- Flush building piping systems thoroughly
- Check if well and pump are operating correctly
- See if all valves, gauges and controls are working properly
- Ensure system is fully pressurized (at least 20 psi) and not leaking
- Make sure all treatment equipment is operating correctly (*if applicable*)
- Inspect/change inline filters, regenerate softeners, chlorine residual, etc. for any treatment that applies
- Make sure storage tanks are sealed, not leaking, and in working order
- Collect a special purpose total coliform sample from the farthest point in the distribution system. Submit the results of the sample to IDEM.
- Optionally chlorinate the well and distribution system

Required actions:

- Due to the positive Total Coliform sample taken prior to closing, **your system must collect three (3) Repeats and a Source sample within seven (7) days of returning to normal operations. Your monthly routine sample will also need to be taken the following month.** (see attached)
- Your estimated reopen date is "tentatively" May 1, 2020. Please notify the IDEM Compliance Section at dwbmgr@idem.in.gov **if that date changes**, so we can adjust your due date.

Sincerely,

Drinking Water Branch
Office of Water Quality
