General Comments

On July 12, 2024, a routine inspection was conducted at this facility. Upon arrival, a document review was conducted. All documents were available to review and in good order. 100% of the manure generated on site is applied to fields controlled by the facility. Manure and soil samples were current, and the facility has an active license with the Indiana State Chemist. A recent application event was reviewed and found to have been conducted at an appropriate agronomic rate.

After the document review a visual inspection was conducted. All structures and vegetation were well maintained. This inspection was conducted shortly after a very significant precipitation event and was well drained without ponding or runoff. All mortalities are composted on site. No operational or maintenance issues were observed at the time of this inspection.

Description of Violations and Further Actions

The findings noted in this report do not include a compliance evaluation for the submittal of required construction notifications, construction affidavits, facility change notifications, as-built plans, waste storage structure closures, and special compliance monitoring reports or data.
