Hi Josh,

I received your permit modification to add a few new sites and I have one item to clarify before beginning my review.

The site identified as OAK-1 appears to be comprised of 6 smaller fields. Are the 6 fields that comprise OAK-1 always farmed the same or is there the possibility of different uses for each field? When there are multiple uses on different sections of a large field, it is easier for recordkeeping and heavy metal/nutrient load tracking if a large field is broken down into smaller fields representing each use.

Please let me know your thoughts if OAK-1 should stay one large field or if it may benefit from permitting the fields individually. Give me a call if you have any questions.

Thanks!

Morrighan,

This particular field the farmer has farmed for 15 years and has only planted one (same crop) for that year. Both the land owner and the farmer consider it one field. I know in the past we have separated the fields out but in this particular case we are confident it will continue to be farmed as one field with one crop. Appreciate you reaching out. Thanks

Hi Josh,

Here is what I have mapped for Oak-1 and Reck-1 (see attached). I show OAK-1 in sections 3 and 4, and Reck-1 in section 23. Let me know if you agree and I can add that to our database.

Thanks!

Morrigan,

Vincennes is a tough area as it was the first city in Indiana. We went through something similar like this during the 2019 permit modification for IN LA 00536 that Kate Garvey reviewed. In 2019 for fields WITT 1-5 the township/range/section identification was unidentifiable in GIS databases for Knox County. She was able to find the location of the sites in "Vincennes Area land grants, Division B" for Knox County. For the 2024 modification I was not able to find the section number in the identification system. I have attached a summary of what Kate and I worked on. Can you help me out on OAK-1 and RECK-1?

I have corrected the address for BMR Partners and updated the file. See attached. Thanks for your help on this

Hi Josh,

I have reviewed the Vincennes WWTP land application permit modification application. The following information is needed to complete my review:

1. The Application Site Information form for the site OAK-1 did not include a Section Number. Please confirm the section in which the site is located.
2. The Application Site Information form for the site Reck-1 did not include a Section Number. Please confirm the section in which the site is located.

3. We were unable to confirm the address for the potentially affect persons identified as BMR Partners (third on the attached list). Please provide a complete or alternate address.

Please submit the above information within 30 days of the date of this e-mail. If you need additional time or have any questions, please let me know.

Thanks!

Morrighan,

CHR-8 was just recently purchased. The owner purchased it as one purchase and both the farmer and owner consider it one field. It will always have the same crop planted each year. Please approve this as one field if at all possible. Thanks

Hi Josh,

We are working on final review of your modification, and I have an additional question:

- The site identified as CHR-8 appears to be comprised of 2 fields. When there are multiple uses on different sections of a large field, it is easier for recordkeeping and heavy metal/nutrient load tracking if a large field is broken down into smaller fields representing each use. We also noted all of the CHR sites in this area appear to be permitted as smaller individual fields. Are the 2 fields that comprise CHR-8 always farmed the same or is there the possibility of different uses for each field?

Please let me know your thoughts if CHR-8 should stay one large field or if it may benefit from permitting the fields individually. Give me a call if you have any questions.

Thanks!
Morrighan
