Re: Carlisle Mine NPDES Permit: IN0062791
Proposed pumping of Pond C to Berger Ditch while maintenance occurs at Outfall 005

Dear Mr. Dayson:

Sunrise Coal, LLC proposes to discharge storm water and mine coal wash plant process wastewater via pumping from Pond C to Berger Ditch. Carlisle Mine's NPDES Permit IN0062791 Outfall 005 has erosion that needs repaired. In order to properly repair the erosion, Sunrise Coal will need to pump the water level below the discharge elevation to be able to perform maintenance on the outfall. Water being pumped from the pond will be monitored per the NPDES Permit IN0062791 guidelines. Frequent internal pH test on Pond C will be kept on record in house, to ensure the water quality being pumped, meets the discharge limitations set forth in the permit.

If you have any questions or need additional information, please contact me at 812-229-1293 or email kkaiser@sunrisecoal.com.

Sincerely,

Koye Kaiser.
Sunrise Coal, LLC
