Hailey,

Attached is the Waters of the State Determination for the Prairie Creek Wind project in Blackford County. Please share this document with the applicant, Oliver Ellen of Prairie Creek, LLC.

Let me know if you have any questions,

Evan White, Wetlands Project Manager
Wetlands and Stormwater Section, Office of Water Quality
100 North Senate Avenue, Room 1255

WATER OF THE STATE DETERMINATION

VIA ELECTRONIC MAIL:

PROJECT NO.: 2023-84-5-EJW-Q
PROJECT NAME: Prairie Creek Wind WOSD
AUTHORITY: 327 IAC 17-1-3(13), 327 IAC 17-1-3(17)
DATE OF ISSUANCE: April 11, 2023
DATE OF EXPIRATION: April 11, 2028

APPROVED: _____

Brian Wolff, Branch Chief
Surface Water and Operations
Office of Water Quality

RESPONSIBLE PARTIES: Prairie Creek, LLC
Attn: Oliver Ellen
353 N. Clark St., 30th Floor
Chicago, IL 60654

DELINEATOR(S): Andy Sheets, Megan O'Loughlin, Hailey Preston, and
Henry Schumacher
SWCA Environmental Consultants
200 W. 22nd Street, Suite 220
Lombard, IL 60148

AGENT(S): SWCA Environmental Consultants
Attn: Hailey Preston

200 West 22nd Street, Suite 220
Lombard, IL 60148

DELINEATION DATES: November 1 – 4, 2021
November 16 – 19, 2021
December 6 – 10, 2021
March 28 – April 1, 2022
May 9 – 10, 2022
June 27 – 28, 2022

DATE REPORT RECEIVED: January 30, 2023

TRACT LOCATION: Blackford County

Latitude: 40.5043 Longitude: -85.3933

The project tract is approximately 2,624 acres and is located in the Northeast area of Blackford County, Indiana.

USACE ID: LRL-2022-508-sjk

CONCLUSIONS:

The Indiana Department of Environmental Management (IDEM) has reached the following conclusions about whether any Waters, as defined in 327 IAC 17-1-3(13), exist on the property. In accordance with 327 IAC 17-1-3(17) the department makes all isolated wetland determinations consistent with the Wetland Delineation Manual, Technical Report Y-87-1 of the United States Army Corps of Engineers.

SITE ID	ACRES	CLASS	FORESTED	EXEMPT	EXEMPTION AUTHORITY	REGULATED UNDER IC 13-18-22
WB006	0.12	3	Yes	No	N/A	Yes

WB012	0.02	3	Yes	No	N/A	Yes
WB015	0.20	3	Yes	No	N/A	Yes
WD004	0.04	3	Yes	No	N/A	Yes
WD014	0.13	3	Yes	No	N/A	Yes
WD023	0.02	3	Yes	No	N/A	Yes
WD029	0.05	1	No	Yes	13-11-2-74.5(a)(5)	No
WD030	0.07	1	No	Yes	13-11-2-74.5(a)(5)	No

COMMENTS:

Wetlands WB006, WB012, WB015, WD004, WD014, and WD023 are forested, Class 3 isolated wetlands that support moderate habitat and hydrology. Wetlands WB006, WB012, WB015, WD004, WD014, and WD023 are regulated under IC-13-18-22. Please be aware that to obtain permits to impact this wetland, the impacts must comply with IC 13-18-22-5(B) and be without practical alternative and be accompanied by taking steps that are practicable and appropriate to minimize potential adverse impact on the aquatic ecosystem of the wetland.

Wetlands WD029 and WD030 are unforested, Class 1 isolated wetlands. Wetlands WD029 and WD030 do not support moderate habitat nor moderate hydrology. Per IC 13-11-2-75.5(a)(5), Wetlands WD029 and WD030 are exempt from permitting.

DISCLAIMER:

This determination is based upon the information provided in the above referenced delineation report and/or the above referenced field evaluation. This determination does not relieve the recipient from the responsibility of obtaining any permits or authorizations that may be required for this project or related activities from IDEM or any other agency or person. The project site and the associated construction may be subject to the Construction Stormwater General Permit (CSGP). The CSGP specifically addresses stormwater run-off and the pollutants associated with all land-disturbing activities of one acre or more. If applicable, permit coverage must be obtained prior to the initiation of land-disturbing activities. Please contact the IDEM Stormwater Program at Stormwat@idem.IN.gov or 317-233-1864 concerning obtaining permit coverage under the CSGP. You may also wish to contact the Indiana Department of Natural Resources at 317-232-4160, or toll free at 877-928-3755, concerning the possible requirement of a Natural Freshwater Lake or Construction in a Floodway Permit.

This determination does not:

- (1) authorize impacts or activities;
- (2) authorize any injury to persons or private property or invasion of other private rights, or any infringement of federal, state or local laws or regulations;
- (3) convey any property rights of any sort, or any exclusive privileges;
- (4) preempt any duty to obtain federal, state or local permits or authorizations required by law for the execution of the project or related activities; or
- (5) authorize changes in the plan design detailed in the application.

APPEALS PROCEDURES:

This decision may be appealed in accordance with IC 4-21.5, the Administrative Orders and Procedures Act. The steps that must be followed to qualify for review are:

1. You must petition for review in writing that states facts demonstrating that you are either the person to whom this decision is directed, a person who is aggrieved or adversely affected by the decision, or a person entitled to review under any law.
2. You must file the petition for review with the Office of Environmental Adjudication (OEA) at the following address:

Office of Environmental Adjudication
100 North Senate Avenue

IGCN Room N103
Indianapolis, IN 46204

3. You must file the petition within eighteen (18) days of the mailing date of this decision. If the eighteenth day falls on a Saturday, Sunday, legal holiday, or other day that the OEA offices are closed during regular business hours, you may file the petition the next day that the OEA offices are open during regular business hours. The petition is deemed filed on the earliest of the following dates: the date it is personally delivered to OEA; the date that the envelope containing the petition is postmarked if it is mailed by United States mail; or, the date it is shown to have been deposited with a private carrier on the private carrier's receipt, if sent by private carrier.

Identifying the permit, decision, or other order for which you seek review by number, name of the responsible, location, or date of this notice will expedite review of the petition.

Note that if a petition for review is granted pursuant to IC 4-21.5-3-7, the petitioner will, and any other person may, obtain notice of any prehearing conferences, preliminary hearings, hearings, stays, and any orders disposing of the proceedings by requesting copies of such notices from OEA.

If you have procedural or scheduling questions regarding your Petition for Administrative Review, additional information on the review process is available at the website of the Office of Environmental Adjudication at <http://www.in.gov/oea>.

If you have any questions about this determination, contact Evan White by phone at 317-671-6698 or by e-mail at EVWhite@idem.in.gov.

State Regulated Wetland Class Determination Worksheet

State Form 57155 (R / 8-22)

INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

INSTRUCTIONS

- (1) Complete this form when conducting wetland delineations. One form should be completed for each wetland on-site.
- (2) If a wetland meets the definition for multiple wetland classes, the wetland will be classified according to the higher class.
- (3) Submit all completed forms with your wetland delineation and Approved Jurisdictional Determination or official U.S. Army Corps of Engineers correspondence when applying for Waters of the State Determinations or State Regulated Wetland Permits. Additional information regarding how to request Indiana Natural Heritage Data, including fees, required information, and timeframes, is available at <https://www.in.gov/dnr/nature-preserves/heritage-data-center/about-inhdc/>.

**IDEM, Office of Water Quality
Wetlands Program
100 North Senate Avenue, Room 1255
Indianapolis, IN 46204**

Questions regarding this form may be directed to:

Phone: (317) 233-8488 or
(800) 451-6027, ext. 38488 (within Indiana)

Program Email: WetlandsProgram@idem.IN.gov

Program Staff: <https://www.in.gov/idem/wetlands/>

Program Website:
<https://www.in.gov/idem/wetlands/>

Form Completed By:

First Name: Hailey	Last Name: Preston	Agent Affiliation (Company Name): SWCA Environmental Consultants
Phone Number: (734) 277-3419	Email address: hailey.preston@swca.com	
Project Name: Prairie Creek Wind Project	Wetland ID (per the wetland delineation): WB006	Wetland Size (Acres): 0.12

STATE REGULATED WETLAND CLASSIFICATION: Class I Class II Class III

Class III Assessment

(1) Is the wetland a listed rare or ecologically important type under IC 13-11-2-25.8(3)(B)? Yes No

If yes, please indicate:

- Acid Bog Acid Seep Circumneutral Bog Circumneutral Seep Cypress Swamp Dune and Swale
 Fen Forested Fen Forested Swamp Marl Beach Muck Flat Panne Sand Flat Sedge Meadow
 Shrub Swamp Sinkhole Pond Sinkhole Swamp Wet Floodplain Forest Wet Prairie Wet Sand Prairie

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (2).

(2) Does the wetland generally possess the presence of, or habitat for rare, threatened, or endangered species within a ½ mile radius according to the IDNR Natural Heritage Database **AND** the species uses the habitat for any stage of its life cycle? Yes No

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (3).

(3) Is the wetland in an undisturbed or minimally disturbed setting? Yes No

If yes, answer Question (4) and Question (5). If no, please provide a justification as an attachment to this form and proceed to the Wetland Habitat Functional Assessment.

(4) Does the wetland support more than minimal wildlife or aquatic habitat? **Please complete the Habitat Functional Assessment below. If Question 3 and Question 4 are checked yes, the Wetland is Class III.** Yes No

(5) Does the wetland support more than minimal hydrological function? **Please complete the Hydrology Functional Assessment below. If Question 3 and Question 5 are checked yes, the Wetland is Class III.** Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Class III Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class III:

- Checking 'Yes' for Question 1
- Checking 'Yes' for Question 2
- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No
- Does the wetland provide habitat corridors between necessary habitat for mobile, state-listed species? Yes No
- Are there Important Bird Areas (IBA) mapped for the wetland or within a ½ mile radius? Yes No
<https://databasin.org/datasets/fdb91971a11d46d39661f0a56c3585ca/>
- Is the wetland dominated by native species? Yes No
- Does the wetland support multiple layers of species habitat (wading birds, dabblers, reptiles, amphibians, etc.)? Yes No
- Do Rapid Assessment Methods indicate that the wetland supports moderate habitat? Yes No
Indicate which method used:
- Are other moderate habitat indicators present (Explain in Remarks)? Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Wetland Habitat Functional Assessment as a separate attachment appended to this form.

Wetland Hydrology Functional Assessment:

(7) Does the wetland support moderate hydrological function? (see options below) Yes No

Checking yes also meets the requirements of Question 5.

Indicators of moderate hydrological function. At least one primary indicator or two secondary indicators are needed to show moderate hydrological function.

Primary Indicators:

- Wetland meets two or more primary hydrology indicators on the wetland determination data form.
- Wetland is located within a floodway or floodplain.
- Wetland position in the watershed is 1st-3rd order or 4th – 5th order if the substrate is sand or silt.
- Wetland possesses strong hydric soil indicators (gleyed matrix or >20% redox/mottles present).
- Wetland is located within a groundwater Wellhead Protection Area.
<https://www.in.gov/idem/cleanwater/information-about/groundwater-monitoring-and-source-water-protection/wellhead-protection-program/source-water-proximity-determination-tool/>

Secondary Indicators:

- Wetland is 0.75 acre or larger in size, indicating at least moderate water storage capacity.
- Dominant vegetation in wetland is highly adapted to prolonged inundation (FACW, OBL dominance).
- Wetland substrate is sand or silt, indicating higher hydraulic conductivity.
- Wetland is located within a highly developed landscape (>75% impervious surface in ½ mile radius).
- Parcel with wetland is bordered by development, roads, or impervious surfaces.
- Wetland is located within a drinking water Source Water Susceptibility Area.
- Wetland is located within a drinking water Source Water Assessment Area
- Other (Explain in Remarks)

Please include any additional comments, justifications and/or supporting documentation related to the Wetland Hydrology Functional Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class II:

Only Checking 'Yes' to Question (6)

Only Checking 'Yes' to Question (7)

If the Wetland is Class II, check Class II at the top of the form, and the form is now complete.

If the Wetland is not Class III or Class II, check Class I at the top of the form and the form is now complete.

Form Completed By:

First Name: Hailey	Last Name: Preston	Agent Affiliation (Company Name): SWCA Environmental Consultants
Phone Number: (734) 277-3419	Email address: hailey.preston@swca.com	
Project Name: Prairie Creek Wind Project	Wetland ID (per the wetland delineation): WD023	Wetland Size (Acres): 0.02

STATE REGULATED WETLAND CLASSIFICATION: Class I Class II Class III

Class III Assessment

(1) Is the wetland a listed rare or ecologically important type under IC 13-11-2-25.8(3)(B)? Yes No

If yes, please indicate:

- Acid Bog Acid Seep Circumneutral Bog Circumneutral Seep Cypress Swamp Dune and Swale
 Fen Forested Fen Forested Swamp Marl Beach Muck Flat Panne Sand Flat Sedge Meadow
 Shrub Swamp Sinkhole Pond Sinkhole Swamp Wet Floodplain Forest Wet Prairie Wet Sand Prairie

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.
If no, proceed to Question (2).

(2) Does the wetland generally possess the presence of, or habitat for rare, threatened, or endangered species within a ½ mile radius according to the IDNR Natural Heritage Database AND the species uses the habitat for any stage of its life cycle? Yes No

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.
If no, proceed to Question (3).

(3) Is the wetland in an undisturbed or minimally disturbed setting? Yes No

If yes, answer Question (4) and Question (5). If no, please provide a justification as an attachment to this form and proceed to the Wetland Habitat Functional Assessment.

(4) Does the wetland support more than minimal wildlife or aquatic habitat? Please complete the Habitat Functional Assessment below. If Question 3 and Question 4 are checked yes, the Wetland is Class III. Yes No

(5) Does the wetland support more than minimal hydrological function? Please complete the Hydrology Functional Assessment below. If Question 3 and Question 5 are checked yes, the Wetland is Class III. Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Class III Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class III:

- Checking 'Yes' for Question 1
- Checking 'Yes' for Question 2
- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No
- Does the wetland provide habitat corridors between necessary habitat for mobile, state-listed species? Yes No
- Are there Important Bird Areas (IBA) mapped for the wetland or within a ½ mile radius? Yes No
<https://databasin.org/datasets/fdb91971a11d46d39661f0a56c3585ca/>
- Is the wetland dominated by native species? Yes No
- Does the wetland support multiple layers of species habitat (wading birds, dabblers, reptiles, amphibians, etc.)? Yes No
- Do Rapid Assessment Methods indicate that the wetland supports moderate habitat? Yes No
Indicate which method used:
- Are other moderate habitat indicators present (Explain in Remarks)? Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Wetland Habitat Functional Assessment as a separate attachment appended to this form.

Wetland Hydrology Functional Assessment:

(7) Does the wetland support moderate hydrological function? (see options below) Yes No

Checking yes also meets the requirements of Question 5.

Indicators of moderate hydrological function. At least one primary indicator or two secondary indicators are needed to show moderate hydrological function.

Primary Indicators:

- Wetland meets two or more primary hydrology indicators on the wetland determination data form.
- Wetland is located within a floodway or floodplain.
- Wetland position in the watershed is 1st-3rd order or 4th – 5th order if the substrate is sand or silt.
- Wetland possesses strong hydric soil indicators (gleyed matrix or >20% redox/mottles present).
- Wetland is located within a groundwater Wellhead Protection Area.
<https://www.in.gov/idem/cleanwater/information-about/groundwater-monitoring-and-source-water-protection/wellhead-protection-program/source-water-proximity-determination-tool/>

Secondary Indicators:

- Wetland is 0.75 acre or larger in size, indicating at least moderate water storage capacity.
- Dominant vegetation in wetland is highly adapted to prolonged inundation (FACW, OBL dominance).
- Wetland substrate is sand or silt, indicating higher hydraulic conductivity.
- Wetland is located within a highly developed landscape (>75% impervious surface in ½ mile radius).
- Parcel with wetland is bordered by development, roads, or impervious surfaces.
- Wetland is located within a drinking water Source Water Susceptibility Area.
- Wetland is located within a drinking water Source Water Assessment Area
- Other (Explain in Remarks)

Please include any additional comments, justifications and/or supporting documentation related to the Wetland Hydrology Functional Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class II:

Only Checking 'Yes' to Question (6)

Only Checking 'Yes' to Question (7)

If the Wetland is Class II, check Class II at the top of the form, and the form is now complete.

If the Wetland is not Class III or Class II, check Class I at the top of the form and the form is now complete.

State Form 57155 (R / 8-22)

INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

INSTRUCTIONS

- (1) Complete this form when conducting wetland delineations. One form should be completed for each wetland on-site.
- (2) If a wetland meets the definition for multiple wetland classes, the wetland will be classified according to the higher class.
- (3) Submit all completed forms with your wetland delineation and Approved Jurisdictional Determination or official U.S. Army Corps of Engineers correspondence when applying for Waters of the State Determinations or State Regulated Wetland Permits. Additional information regarding how to request Indiana Natural Heritage Data, including fees, required information, and timeframes, is available at <https://www.in.gov/dnr/nature-preserves/heritage-data-center/about-inhdc/>.

Phone Number: (734) 277-3419	Email address: hailey.preston@swca.com	
Project Name: Prairie Creek Wind Project	Wetland ID (per the wetland delineation): WB017	Wetland Size (Acres): 0.14

STATE REGULATED WETLAND CLASSIFICATION: Class I Class II Class III

Class III Assessment

(1) Is the wetland a listed rare or ecologically important type under IC 13-11-2-25.8(3)(B)? Yes No

If yes, please indicate:

- Acid Bog Acid Seep Circumneutral Bog Circumneutral Seep Cypress Swamp Dune and Swale
 Fen Forested Fen Forested Swamp Marl Beach Muck Flat Panne Sand Flat Sedge Meadow
 Shrub Swamp Sinkhole Pond Sinkhole Swamp Wet Floodplain Forest Wet Prairie Wet Sand Prairie

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (2).

(2) Does the wetland generally possess the presence of, or habitat for rare, threatened, or endangered species within a ½ mile radius according to the IDNR Natural Heritage Database **AND** the species uses the habitat for any stage of its life cycle? Yes No

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (3).

(3) Is the wetland in an undisturbed or minimally disturbed setting? Yes No

If yes, answer Question (4) and Question (5). If no, please provide a justification as an attachment to this form and proceed to the Wetland Habitat Functional Assessment.

(4) Does the wetland support more than minimal wildlife or aquatic habitat? **Please complete the Habitat Functional Assessment below. If Question 3 and Question 4 are checked yes, the Wetland is Class III.** Yes No

(5) Does the wetland support more than minimal hydrological function? **Please complete the Hydrology Functional Assessment below. If Question 3 and Question 5 are checked yes, the Wetland is Class III.** Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Class III Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class III:

- Checking 'Yes' for Question 1
- Checking 'Yes' for Question 2
- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No
- Does the wetland provide habitat corridors between necessary habitat for mobile, state-listed species? Yes No
- Are there Important Bird Areas (IBA) mapped for the wetland or within a ½ mile radius? Yes No
<https://databasin.org/datasets/fdb91971a11d46d39661f0a56c3585ca/>
- Is the wetland dominated by native species? Yes No
- Does the wetland support multiple layers of species habitat (wading birds, dabblers, reptiles, amphibians, etc.)? Yes No
- Do Rapid Assessment Methods indicate that the wetland supports moderate habitat? Yes No
Indicate which method used:
- Are other moderate habitat indicators present (Explain in Remarks)? Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Wetland Habitat Functional Assessment as a separate attachment appended to this form.

Wetland Hydrology Functional Assessment:

(7) Does the wetland support moderate hydrological function? (see options below) Yes No

Checking yes also meets the requirements of Question 5.

Indicators of moderate hydrological function. At least one primary indicator or two secondary indicators are needed to show moderate hydrological function.

Primary Indicators:

- Wetland meets two or more primary hydrology indicators on the wetland determination data form.
- Wetland is located within a floodway or floodplain.
- Wetland position in the watershed is 1st-3rd order or 4th – 5th order if the substrate is sand or silt.
- Wetland possesses strong hydric soil indicators (gleyed matrix or >20% redox/mottles present).
- Wetland is located within a groundwater Wellhead Protection Area.
<https://www.in.gov/idem/cleanwater/information-about/groundwater-monitoring-and-source-water-protection/wellhead-protection-program/source-water-proximity-determination-tool/>

Secondary Indicators:

- Wetland is 0.75 acre or larger in size, indicating at least moderate water storage capacity.
- Dominant vegetation in wetland is highly adapted to prolonged inundation (FACW, OBL dominance).
- Wetland substrate is sand or silt, indicating higher hydraulic conductivity.
- Wetland is located within a highly developed landscape (>75% impervious surface in ½ mile radius).
- Parcel with wetland is bordered by development, roads, or impervious surfaces.
- Wetland is located within a drinking water Source Water Susceptibility Area.
- Wetland is located within a drinking water Source Water Assessment Area
- Other (Explain in Remarks)

Please include any additional comments, justifications and/or supporting documentation related to the Wetland Hydrology Functional Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class II:

Only Checking 'Yes' to Question (6)

Only Checking 'Yes' to Question (7)

If the Wetland is Class II, check Class II at the top of the form, and the form is now complete.

If the Wetland is not Class III or Class II, check Class I at the top of the form and the form is now complete.

State Regulated Wetland Class Determination Worksheet

State Form 57155 (R / 8-22)

INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

INSTRUCTIONS

- (1) Complete this form when conducting wetland delineations. One form should be completed for each wetland on-site.
- (2) If a wetland meets the definition for multiple wetland classes, the wetland will be classified according to the higher class.
- (3) Submit all completed forms with your wetland delineation and Approved Jurisdictional Determination or official U.S. Army Corps of Engineers correspondence when applying for Waters of the State Determinations or State Regulated Wetland Permits. Additional information regarding how to request Indiana Natural Heritage Data, including fees, required information, and timeframes, is available at <https://www.in.gov/dnr/nature-preserves/heritage-data-center/about-inhdc/>.

Form Completed By:

First Name: Hailey	Last Name: Preston	Agent Affiliation (Company Name): SWCA Environmental Consultants
Phone Number: (734) 277-3419	Email address: hailey.preston@swca.com	
Project Name: Prairie Creek Wind Project	Wetland ID (per the wetland delineation): WB012	Wetland Size (Acres): 0.02

STATE REGULATED WETLAND CLASSIFICATION: Class I Class II Class III

Class III Assessment

(1) Is the wetland a listed rare or ecologically important type under IC 13-11-2-25.8(3)(B)? Yes No

If yes, please indicate:

- Acid Bog Acid Seep Circumneutral Bog Circumneutral Seep Cypress Swamp Dune and Swale
 Fen Forested Fen Forested Swamp Marl Beach Muck Flat Panne Sand Flat Sedge Meadow
 Shrub Swamp Sinkhole Pond Sinkhole Swamp Wet Floodplain Forest Wet Prairie Wet Sand Prairie

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.
 If no, proceed to Question (2).

(2) Does the wetland generally possess the presence of, or habitat for rare, threatened, or endangered species within a ½ mile radius according to the IDNR Natural Heritage Database AND the species uses the habitat for any stage of its life cycle? Yes No

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.
 If no, proceed to Question (3).

(3) Is the wetland in an undisturbed or minimally disturbed setting? Yes No

If yes, answer Question (4) and Question (5). If no, please provide a justification as an attachment to this form and proceed to the Wetland Habitat Functional Assessment.

(4) Does the wetland support more than minimal wildlife or aquatic habitat? Please complete the Habitat Functional Assessment below. If Question 3 and Question 4 are checked yes, the Wetland is Class III. Yes No

(5) Does the wetland support more than minimal hydrological function? Please complete the Hydrology Functional Assessment below. If Question 3 and Question 5 are checked yes, the Wetland is Class III. Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Class III Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class III:

- Checking 'Yes' for Question 1
- Checking 'Yes' for Question 2
- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No
- Does the wetland provide habitat corridors between necessary habitat for mobile, state-listed species? Yes No
- Are there Important Bird Areas (IBA) mapped for the wetland or within a ½ mile radius? Yes No
<https://databasin.org/datasets/fdb91971a11d46d39661f0a56c3585ca/>
- Is the wetland dominated by native species? Yes No
- Does the wetland support multiple layers of species habitat (wading birds, dabblers, reptiles, amphibians, etc.)? Yes No
- Do Rapid Assessment Methods indicate that the wetland supports moderate habitat? Yes No
Indicate which method used:
- Are other moderate habitat indicators present (Explain in Remarks)? Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Wetland Habitat Functional Assessment as a separate attachment appended to this form.

Wetland Hydrology Functional Assessment:

(7) Does the wetland support moderate hydrological function? (see options below) Yes No

Checking yes also meets the requirements of Question 5.

Indicators of moderate hydrological function. At least one primary indicator or two secondary indicators are needed to show moderate hydrological function.

Primary Indicators:

- Wetland meets two or more primary hydrology indicators on the wetland determination data form.
- Wetland is located within a floodway or floodplain.
- Wetland position in the watershed is 1st-3rd order or 4th – 5th order if the substrate is sand or silt.
- Wetland possesses strong hydric soil indicators (gleyed matrix or >20% redox/mottles present).
- Wetland is located within a groundwater Wellhead Protection Area.
<https://www.in.gov/idem/cleanwater/information-about/groundwater-monitoring-and-source-water-protection/wellhead-protection-program/source-water-proximity-determination-tool/>

Secondary Indicators:

- Wetland is 0.75 acre or larger in size, indicating at least moderate water storage capacity.
- Dominant vegetation in wetland is highly adapted to prolonged inundation (FACW, OBL dominance).
- Wetland substrate is sand or silt, indicating higher hydraulic conductivity.
- Wetland is located within a highly developed landscape (>75% impervious surface in ½ mile radius).
- Parcel with wetland is bordered by development, roads, or impervious surfaces.
- Wetland is located within a drinking water Source Water Susceptibility Area.
- Wetland is located within a drinking water Source Water Assessment Area
- Other (Explain in Remarks)

Please include any additional comments, justifications and/or supporting documentation related to the Wetland Hydrology Functional Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class II:

Only Checking 'Yes' to Question (6)

Only Checking 'Yes' to Question (7)

If the Wetland is Class II, check Class II at the top of the form, and the form is now complete.

If the Wetland is not Class III or Class II, check Class I at the top of the form and the form is now complete.

Subject: Waters of the State Determination for the Prairie Creek Wind Project

To Whom it May Concern:

On behalf of RWE Renewables Development (RWE), SWCA Environmental Consultants (SWCA) has prepared this Waters of the State Determination (WOSD) request package for the Prairie Creek Wind Project (project), located in unincorporated Blackford County, Indiana. The project is still in the planning stage; however, the WOSD would be used to avoid and minimize impacts to regulated aquatic resources and as an initial step in potential future permitting processes. This request is solely to determine the applicability of State law and concurrence with the draft class determinations. As summarized in the draft class determination worksheet (Exhibit 2), we are requesting review for wetlands WB006, WB012, WB015, WB017, WD004, WD014, WD023, WD029, and WD030.

This package contains the following application materials:

- Exhibit 1. USACE Approved Jurisdictional Determination and Preliminary Jurisdictional Determination
- Exhibit 2. Wetland Feature Jurisdiction List with Draft Class Determination Worksheets
- Exhibit 3. INHDC Response Letters for Wetlands WD029 and WD030
- Exhibit 4. Wetland Delineation Report

Please address comments and questions to me at (734) 277-3419 or via email at hailey.preston@swca.com. We look forward to hearing from you and thank you for your time in advance.

Sincerely,

A handwritten signature in black ink that reads "Hailey Preston".

Hailey Preston
Lead Wetland Scientist

Ms. Megan O'Loughlin
SWCA Environmental Consultants
200 22nd Street, Suite 200
Lombard, Illinois 60148

Dear Ms. O'Loughlin:

This is regarding your electronic correspondence dated July 19, 2022, requesting an Approved Jurisdictional Determination on behalf of RWE Renewables for certain resources within 2,624 acres associated with the Prairie Creek Wind project in Blackford County, Indiana (latitude 40.5043° and longitude -85.3933°). A location map is enclosed. We have reviewed the submitted data relative to Section 404 of the Clean Water Act.

The U.S. Army Corps of Engineers exercises regulatory authority under Section 10 of the Rivers and Harbors Act of 1899 (33 USC 403) and Section 404 of the Clean Water Act (33 USC 1344) for certain activities in "waters of the United States (U.S.)." These waters include all waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce.

The reported isolated wetlands WA006, WB002, WB006, WB012, WB015, WB017, WC003, WD004, WD005, WD006, WD009, WD010, WD011, WD014, WD023, WD026, WD027, WD028, WD029, WD030 do not appear to be used or be susceptible to use in interstate or foreign commerce. As such, the wetlands are not considered to be "waters of the U.S." and are not regulated under Section 404 of the Clean Water Act. Additionally, drainage features DB02, DB05, DB06, DC02, DC03, DD01, DD04, DD05, DD06, DD09, DD010, SB008, and SC004 are upland features that do not exhibit stream characteristics and are therefore, not considered to be "waters of the U.S." However, this determination does not relieve you of the responsibility to comply with applicable State law. We urge you to contact the Indiana Department of Environmental Management (IDEM), Office of Water Quality at wetlandsprogram@idem.in.gov to determine the applicability of State law to the isolated wetlands mentioned above and verification of the wetland boundaries.

This letter contains an approved jurisdictional determination (JD) for your site. If you object to this JD, you may request an administrative appeal under Corps regulations at 33 CFR Part 331. Enclosed you will find a Notification of Appeal Process (NAP) fact sheet and Request for Appeal (RFA) form. If you request to appeal this JD you must submit a completed RFA form to the Lakes and Rivers Division Office at the following address:

US Army Corps of Engineers
Attn: Appeal Review Officer, CELRD-PD-REG
550 Main Street, Room 10780
Cincinnati, OH 45202-3222

In order for an RFA to be accepted by the Corps, the Corps must determine that it is complete, that it meets the criteria for appeal under 33 CFR Part 331.5, and that it has been received by the Division Office within 60 days of the date of the NAP. Should you decide to submit an RFA form, it must be received at the above address by **January 26, 2023**.

This jurisdictional determination is valid for a period of 5 years from the date of this letter unless new information warrants revision of the determination before the expiration date. It is not necessary to submit an RFA form to the Division office if you do not object to the JD in this letter.

The delineation included herein has been conducted to identify the location and extent of the aquatic resource boundaries and/or the jurisdictional status of aquatic resources for purposes of the Clean Water Act for the particular site identified in this request. This delineation and/or jurisdictional determination may not be valid for the Wetland Conservation Provisions of the Food Security Act of 1985, as amended. If you or your tenant are USDA program participants, or anticipate participation in USDA programs, you should discuss the applicability of a certified wetland determination with the local USDA service center prior to starting work.

If we can be of any further assistance, please contact me by calling 317-543-9424 or emailing Sarah.J.Keller@usace.army.mil. Any correspondence on this matter should reference our Identification Number LRL-2022-508-sjk.

Sincerely,

Sarah J. Keller
Team Leader
Indianapolis Regulatory Office

NOTIFICATION OF ADMINISTRATIVE APPEAL OPTIONS AND PROCESS AND REQUEST FOR APPEAL

Applicant: RWE Renewables		File Number: LRL-2022-508	Date: 11/28/2022
Attached is:			See Section below
	INITIAL PROFFERED PERMIT (Standard Permit or Letter of permission)	A	
	PROFFERED PERMIT (Standard Permit or Letter of permission)	B	
	PERMIT DENIAL	C	
X	APPROVED JURISDICTIONAL DETERMINATION	D	
	PRELIMINARY JURISDICTIONAL DETERMINATION	E	

SECTION I - The following identifies your rights and options regarding an administrative appeal of the above decision. Additional information may be found at http://www.usace.army.mil/CECW/Pages/reg_materials.aspx or Corps regulations at 33 CFR Part 331.

A: INITIAL PROFFERED PERMIT: You may accept or object to the permit.

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- **OBJECT:** If you object to the permit (Standard or LOP) because of certain terms and conditions therein, you may request that the permit be modified accordingly. You must complete Section II of this form and return the form to the district engineer. Your objections must be received by the district engineer within 60 days of the date of this notice, or you will forfeit your right to appeal the permit in the future. Upon receipt of your letter, the district engineer will evaluate your objections and may: (a) modify the permit to address all of your concerns, (b) modify the permit to address some of your objections, or (c) not modify the permit having determined that the permit should be issued as previously written. After evaluating your objections, the district engineer will send you a proffered permit for your reconsideration, as indicated in Section B below.

B: PROFFERED PERMIT: You may accept or appeal the permit

- **ACCEPT:** If you received a Standard Permit, you may sign the permit document and return it to the district engineer for final authorization. If you received a Letter of Permission (LOP), you may accept the LOP and your work is authorized. Your signature on the Standard Permit or acceptance of the LOP means that you accept the permit in its entirety, and waive all rights to appeal the permit, including its terms and conditions, and approved jurisdictional determinations associated with the permit.
- **APPEAL:** If you choose to decline the proffered permit (Standard or LOP) because of certain terms and conditions therein, you may appeal the declined permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

C: PERMIT DENIAL: You may appeal the denial of a permit under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

D: APPROVED JURISDICTIONAL DETERMINATION: You may accept or appeal the approved JD or provide new information.

- **ACCEPT:** You do not need to notify the Corps to accept an approved JD. Failure to notify the Corps within 60 days of the date of this notice, means that you accept the approved JD in its entirety, and waive all rights to appeal the approved JD.
- **APPEAL:** If you disagree with the approved JD, you may appeal the approved JD under the Corps of Engineers Administrative Appeal Process by completing Section II of this form and sending the form to the division engineer. This form must be received by the division engineer within 60 days of the date of this notice.

E: PRELIMINARY JURISDICTIONAL DETERMINATION: You do not need to respond to the Corps regarding the preliminary JD. The Preliminary JD is not appealable. If you wish, you may request an approved JD (which may be appealed), by contacting the Corps district for further instruction. Also you may provide new information for further consideration by the Corps to reevaluate the JD.

SECTION II - REQUEST FOR APPEAL or OBJECTIONS TO AN INITIAL PROFFERED PERMIT

REASONS FOR APPEAL OR OBJECTIONS: (Describe your reasons for appealing the decision or your objections to an initial proffered permit in clear concise statements. You may attach additional information to this form to clarify where your reasons or objections are addressed in the administrative record.)

ADDITIONAL INFORMATION: The appeal is limited to a review of the administrative record, the Corps memorandum for the record of the appeal conference or meeting, and any supplemental information that the review officer has determined is needed to clarify the administrative record. Neither the appellant nor the Corps may add new information or analyses to the record. However, you may provide additional information to clarify the location of information that is already in the administrative record.

POINT OF CONTACT FOR QUESTIONS OR INFORMATION:

If you have questions regarding this decision and/or the appeal process you may contact:

Sarah Keller
U.S. Army Corps of Engineers—Louisville District
Indianapolis Regulatory Office
8902 Otis Avenue, S106B
Indianapolis, IN 46216
(317) 543-9424
Email: Sarah.J.Keller@usace.army.mil

If you only have questions regarding the appeal process you may also contact:

Katherine A. McCafferty
Regulatory Administrative Appeals Officer
U.S. Army Corps of Engineers,
Great Lakes and Ohio River Division
550 Main Street, Room 10780
Cincinnati, Ohio 45202-3222
Office Phone: 513-684-2699, FAX: 513-684-2460
e-mail: katherine.a.mccafferty@usace.army.mil

RIGHT OF ENTRY: Your signature below grants the right of entry to Corps of Engineers personnel, and any government consultants, to conduct investigations of the project site during the course of the appeal process. You will be provided a 15 day notice of any site investigation, and will have the opportunity to participate in all site investigations.

Signature of appellant or agent.

Date:

Telephone number:

APPROVED JURISDICTIONAL DETERMINATION FORM
U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

Center coordinates of site (lat/long in degree decimal format): Lat. 40.5043° N, Long. -85.3933° W.
Universal Transverse Mercator:

Name of nearest waterbody: Little Walnut Creek

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: N/A

Name of watershed or Hydrologic Unit Code (HUC): 05120203

Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.

Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form.

D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):

Office (Desk) Determination. Date: 10/27/2022

Field Determination. Date(s):

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There **Are no** "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

Waters subject to the ebb and flow of the tide.

Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce.

Explain: .

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There **Are no** "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

1. Waters of the U.S.

a. Indicate presence of waters of U.S. in review area (check all that apply):¹

- TNWs, including territorial seas
- Wetlands adjacent to TNWs
- Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs
- Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- Impoundments of jurisdictional waters
- Isolated (interstate or intrastate) waters, including isolated wetlands

b. Identify (estimate) size of waters of the U.S. in the review area:

Non-wetland waters: linear feet: width (ft) and/or acres.

Wetlands: acres.

c. Limits (boundaries) of jurisdiction based on: Pick List

Elevation of established OHWM (if known): .

2. Non-regulated waters/wetlands (check if applicable):³

- Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: **The reported Wetlands WA006 (0.19 ac), WB002 (0.15 ac), WB006 (0.12 ac), WB012 (0.02 ac), WB015 (0.2 ac) WB017 (0.14 ac), WC003 (0.21 ac), WD004 (0.04 ac), WD005 (0.12 ac), WD006 (0.05 ac), WD009 (0.11 ac), WD010 (0.16 ac), WD011 (0.09 ac), WD014 (0.13 ac), WD023 (0.02 ac), WD026 (0.1 ac), WD027 (0.12 ac), WD028 (0.59 ac), WD029 (0.05 ac), WD030 (0.07 ac) are located in isolated depressions with no hydrologic or ecologic connection to Waters of the U.S. and are not susceptible to use in interstate or foreign commerce. As such, they are not WOUS. The**

¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

³ Supporting documentation is presented in Section III.F.

reported linear features DB02 (90.4 ft), DB05 (5.9 ft), DB06 (93.14 ft), DC02 (118.8 ft), DC03 (138.6 ft), DD01 (207.15 ft), DD04 (246.56 ft), DD05 (118.6 ft), DD06 (317.85), DD09 (462.96 ft), DD10 (463.98 ft), SB008 (152.5 ft), and SC004 (632.83 ft) lack a defined channel and ordinary high water mark indicators and are, therefore, not WOUS.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW: _____ .

Summarize rationale supporting determination: _____ .

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is “adjacent”?: _____ .

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: **Pick List**

Drainage area: **Pick List**

Average annual rainfall: _____ inches

Average annual snowfall: _____ inches

(ii) Physical Characteristics:

(a) Relationship with TNW:

Tributary flows directly into TNW.

Tributary flows through **Pick List** tributaries before entering TNW.

Project waters are **Pick List** river miles from TNW.

Project waters are **Pick List** river miles from RPW.

Project waters are **Pick List** aerial (straight) miles from TNW.

Project waters are **Pick List** aerial (straight) miles from RPW.

Project waters cross or serve as state boundaries. Explain: _____ .

Identify flow route to TNW⁵: _____ .

Tributary stream order, if known: _____ .

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

(b) General Tributary Characteristics (check all that apply):

- Tributary is:** Natural
 Artificial (man-made). Explain: .
 Manipulated (man-altered). Explain: .

Tributary properties with respect to top of bank (estimate):

- Average width: feet
Average depth: feet
Average side slopes: **Pick List**.

Primary tributary substrate composition (check all that apply):

- | | | |
|--------------------------------------------|----------------------------------------------------|-----------------------------------|
| <input type="checkbox"/> Silts | <input type="checkbox"/> Sands | <input type="checkbox"/> Concrete |
| <input type="checkbox"/> Cobbles | <input type="checkbox"/> Gravel | <input type="checkbox"/> Muck |
| <input type="checkbox"/> Bedrock | <input type="checkbox"/> Vegetation. Type/% cover: | |
| <input type="checkbox"/> Other. Explain: . | | |

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: .

Presence of run/riffle/pool complexes. Explain: .

Tributary geometry: Pick List

Tributary gradient (approximate average slope): %

(c) Flow:

Tributary provides for: Pick List

Estimate average number of flow events in review area/year: Pick List

Describe flow regime: .

Other information on duration and volume: .

Surface flow is: Pick List. Characteristics: .

Subsurface flow: Pick List. Explain findings: .

- Dye (or other) test performed: .

Tributary has (check all that apply):

- | | |
|-------------------------------------------------------------------------------|---------------------------------------------------------------------|
| <input type="checkbox"/> Bed and banks | |
| <input type="checkbox"/> OHWM ⁶ (check all indicators that apply): | |
| <input type="checkbox"/> clear, natural line impressed on the bank | <input type="checkbox"/> the presence of litter and debris |
| <input type="checkbox"/> changes in the character of soil | <input type="checkbox"/> destruction of terrestrial vegetation |
| <input type="checkbox"/> shelving | <input type="checkbox"/> the presence of wrack line |
| <input type="checkbox"/> vegetation matted down, bent, or absent | <input type="checkbox"/> sediment sorting |
| <input type="checkbox"/> leaf litter disturbed or washed away | <input type="checkbox"/> scour |
| <input type="checkbox"/> sediment deposition | <input type="checkbox"/> multiple observed or predicted flow events |
| <input type="checkbox"/> water staining | <input type="checkbox"/> abrupt change in plant community |
| <input type="checkbox"/> other (list): | |
| <input type="checkbox"/> Discontinuous OHWM. ⁷ Explain: . | |

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- | | |
|--------------------------------------------------------------------|------------------------------------------------------------------------|
| <input type="checkbox"/> High Tide Line indicated by: | <input type="checkbox"/> Mean High Water Mark indicated by: |
| <input type="checkbox"/> oil or scum line along shore objects | <input type="checkbox"/> survey to available datum; |
| <input type="checkbox"/> fine shell or debris deposits (foreshore) | <input type="checkbox"/> physical markings; |
| <input type="checkbox"/> physical markings/characteristics | <input type="checkbox"/> vegetation lines/changes in vegetation types. |
| <input type="checkbox"/> tidal gauges | |
| <input type="checkbox"/> other (list): | |

(iii) **Chemical Characteristics:**

Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.).

Explain: .

Identify specific pollutants, if known: .

⁶A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

⁷Ibid.

(iv) **Biological Characteristics. Channel supports (check all that apply):**

- Riparian corridor. Characteristics (type, average width):
- Wetland fringe. Characteristics:
- Habitat for:
 - Federally Listed species. Explain findings:
 - Fish/spawn areas. Explain findings:
 - Other environmentally-sensitive species. Explain findings:
 - Aquatic/wildlife diversity. Explain findings:

2. **Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW**

(i) **Physical Characteristics:**

(a) General Wetland Characteristics:

Properties:

Wetland size: acres

Wetland type. Explain:

Wetland quality. Explain:

Project wetlands cross or serve as state boundaries. Explain:

(b) General Flow Relationship with Non-TNW:

Flow is: **Pick List**. Explain:

Surface flow is: **Pick List**

Characteristics:

Subsurface flow: **Pick List**. Explain findings:

- Dye (or other) test performed:

(c) Wetland Adjacency Determination with Non-TNW:

Directly abutting

Not directly abutting

Discrete wetland hydrologic connection. Explain:

Ecological connection. Explain:

Separated by berm/barrier. Explain:

(d) Proximity (Relationship) to TNW

Project wetlands are **Pick List** river miles from TNW.

Project waters are **Pick List** aerial (straight) miles from TNW.

Flow is from: **Pick List**.

Estimate approximate location of wetland as within the **Pick List** floodplain.

(ii) **Chemical Characteristics:**

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain:

Identify specific pollutants, if known:

(iii) **Biological Characteristics. Wetland supports (check all that apply):**

- Riparian buffer. Characteristics (type, average width):
- Vegetation type/percent cover. Explain:
- Habitat for:
 - Federally Listed species. Explain findings:
 - Fish/spawn areas. Explain findings:
 - Other environmentally-sensitive species. Explain findings:
 - Aquatic/wildlife diversity. Explain findings:

3. **Characteristics of all wetlands adjacent to the tributary (if any)**

All wetland(s) being considered in the cumulative analysis: **Pick List**

Approximately () acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N) Size (in acres) Directly abuts? (Y/N) Size (in acres)

Summarize overall biological, chemical and physical functions being performed:

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:
2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
 TNWs: linear feet width (ft), Or, acres.
 Wetlands adjacent to TNWs: acres.
2. **RPWs that flow directly or indirectly into TNWs.**
 Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial:
 Tributaries of TNW where tributaries have continuous flow “seasonally” (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally:

Provide estimates for jurisdictional waters in the review area (check all that apply):

- Tributary waters: linear feet width (ft).
 Other non-wetland waters: acres.
Identify type(s) of waters: .

3. Non-RPWs⁸ that flow directly or indirectly into TNWs.

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional waters within the review area (check all that apply):

- Tributary waters: linear feet width (ft).
 Other non-wetland waters: acres.
Identify type(s) of waters: .

4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.
 Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: .
 Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: .

Provide acreage estimates for jurisdictional wetlands in the review area: acres.

5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetlands in the review area: acres.

6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.

- Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional wetlands in the review area: acres.

7. Impoundments of jurisdictional waters.⁹

As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.

- Demonstrate that impoundment was created from "waters of the U.S.," or
 Demonstrate that water meets the criteria for one of the categories presented above (1-6), or
 Demonstrate that water is isolated with a nexus to commerce (see E below).

E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):¹⁰

- which are or could be used by interstate or foreign travelers for recreational or other purposes.
 from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
 which are or could be used for industrial purposes by industries in interstate commerce.
 Interstate isolated waters. Explain: .
 Other factors. Explain: .

Identify water body and summarize rationale supporting determination: .

⁸See Footnote # 3.

⁹To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.

¹⁰Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

Provide estimates for jurisdictional waters in the review area (check all that apply):

- Tributary waters: linear feet width (ft).
- Other non-wetland waters: acres.
 Identify type(s) of waters: .
- Wetlands: acres.

F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):

- If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
 - Prior to the Jan 2001 Supreme Court decision in “*SWANCC*,” the review area would have been regulated based solely on the “Migratory Bird Rule” (MBR).
- Waters do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction. Explain: .
- Other: (explain, if not covered above): .

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non-wetland waters (i.e., rivers, streams): **3,049.27** linear feet width (ft).
- Lakes/ponds: acres.
- Other non-wetland waters: acres. List type of aquatic resource: .
- Wetlands: 2.68 acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the “Significant Nexus” standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters (i.e., rivers, streams): linear feet, width (ft).
- Lakes/ponds: acres.
- Other non-wetland waters: acres. List type of aquatic resource: .
- Wetlands: acres.

SECTION IV: DATA SOURCES.

A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):

- Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Wetland delineation report dated July 2022 by SWCA Environmental Consultants.
- Data sheets prepared/submitted by or on behalf of the applicant/consultant.
 - Office concurs with data sheets/delineation report.
 - Office does not concur with data sheets/delineation report.
- Data sheets prepared by the Corps: .
- Corps navigable waters’ study: .
- U.S. Geological Survey Hydrologic Atlas: .
 - USGS NHD data.
 - USGS 8 and 12 digit HUC maps.
- U.S. Geological Survey map(s). Cite scale & quad name: 7.5' Hartford City West, Hartford City East, Roll, and Montpelier quads (delineation report) .
- USDA Natural Resources Conservation Service Soil Survey. Citation: Web Soil Survey, Blackford County (delineation report).
- National wetlands inventory map(s). Cite name: map in delineation report.
- State/Local wetland inventory map(s): .
- FEMA/FIRM maps: DFIRM layer (delineation report) .
- 100-year Floodplain Elevation is: (National Geodetic Vertical Datum of 1929)
- Photographs: Aerial (Name & Date): Undated aerials in delineation report; 2005, 2012, 2016, 2019, 2022 (Google Earth) .
 or Other (Name & Date): Site photos in delineation report (11/1-11/4/2021, 11/16-11/17/2021, 11/19/2021, 12/6-12/10/2021, 3/28-3/31/2022, 5/9-5/11/2022).
- Previous determination(s). File no. and date of response letter: .
- Applicable/supporting case law: .
- Applicable/supporting scientific literature: .
- Other information (please specify): LiDAR DEM/Hillshade (NRV); WETS data (delineation report) .

B. ADDITIONAL COMMENTS TO SUPPORT JD: .

- 1) The Corps of Engineers believes that there may be jurisdictional aquatic resources in the review area, and the requestor of this PJD is hereby advised of his or her option to request and obtain an approved JD (AJD) for that review area based on an informed decision after having discussed the various types of JDs and their characteristics and circumstances when they may be appropriate.
- 2) In any circumstance where a permit applicant obtains an individual permit, or a Nationwide General Permit (NWP) or other general permit verification requiring "pre-construction notification" (PCN), or requests verification for a non-reporting NWP or other general permit, and the permit applicant has not requested an AJD for the activity, the permit applicant is hereby made aware that: (1) the permit applicant has elected to seek a permit authorization based on a PJD, which does not make an official determination of jurisdictional aquatic resources; (2) the applicant has the option to request an AJD before accepting the terms and conditions of the permit authorization, and that basing a permit authorization on an AJD could possibly result in less compensatory mitigation being required or different special conditions; (3) the applicant has the right to request an individual permit rather than accepting the terms and conditions of the NWP or other general permit authorization; (4) the applicant can accept a permit authorization and thereby agree to comply with all the terms and conditions of that permit, including whatever mitigation requirements the Corps has determined to be necessary; (5) undertaking any activity in reliance upon the subject permit authorization without requesting an AJD constitutes the applicant's acceptance of the use of the PJD; (6) accepting a permit authorization (e.g., signing a proffered individual permit) or undertaking any activity in reliance on any form of Corps permit authorization based on a PJD constitutes agreement that all aquatic resources in the review area affected in any way by that activity will be treated as jurisdictional, and waives any challenge to such jurisdiction in any administrative or judicial compliance or enforcement action, or in any administrative appeal or in any Federal court; and (7) whether the applicant elects to use either an AJD or a PJD, the JD will be processed as soon as practicable. Further, an AJD, a proffered individual permit (and all terms and conditions contained therein), or individual permit denial can be administratively appealed pursuant to 33 C.F.R. Part 331. If, during an administrative appeal, it becomes appropriate to make an official determination whether geographic jurisdiction exists over aquatic resources in the review area, or to provide an official delineation of jurisdictional aquatic resources in the review area, the Corps will provide an AJD to accomplish that result, as soon as is practicable. This PJD finds that there "*may be*" waters of the U.S. and/or that there "*may be*" navigable waters of the U.S. on the subject review area, and identifies all aquatic features in the review area that could be affected by the proposed activity, based on the following information:

SUPPORTING DATA. Data reviewed for PJD (check all that apply)

Checked items should be included in subject file. Appropriately reference sources below where indicated for all checked items:

- Maps, plans, plots or plat submitted by or on behalf of the PJD requestor:
Map: _____.
- Data sheets prepared/submitted by or on behalf of the PJD requestor.

* Denotes farmed wetland. Farmed wetlands are excluded from WOSD analysis.

State Regulated Wetland Class Determination Worksheet

State Form 57155 (R / 8-22)

INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

INSTRUCTIONS

- (1) Complete this form when conducting wetland delineations. One form should be completed for each wetland on-site.
- (2) If a wetland meets the definition for multiple wetland classes, the wetland will be classified according to the higher class.
- (3) Submit all completed forms with your wetland delineation and Approved Jurisdictional Determination or official U.S. Army Corps of Engineers correspondence when applying for Waters of the State Determinations or State Regulated Wetland Permits. Additional information regarding how to request Indiana Natural Heritage Data, including fees, required information, and timeframes, is available at <https://www.in.gov/dnr/nature-preserves/heritage-data-center/about-inhdc/>.

**IDEM, Office of Water Quality
Wetlands Program
100 North Senate Avenue, Room 1255
Indianapolis, IN 46204**

Questions regarding this form may be directed to:

Phone: (317) 233-8488 or
(800) 451-6027, ext. 38488 (within Indiana)

Program Email: WetlandsProgram@idem.IN.gov

Program Staff: <https://www.in.gov/idem/wetlands/>

Program Website:
<https://www.in.gov/idem/wetlands/>

Form Completed By:

First Name: Hailey	Last Name: Preston	Agent Affiliation (Company Name): SWCA Environmental Consultants
Phone Number: (734) 277-3419	Email address: hailey.preston@swca.com	
Project Name: Prairie Creek Wind Project	Wetland ID (per the wetland delineation): WB006	Wetland Size (Acres): 0.12

STATE REGULATED WETLAND CLASSIFICATION: Class I Class II Class III

Class III Assessment

(1) Is the wetland a listed rare or ecologically important type under IC 13-11-2-25.8(3)(B)? Yes No

If yes, please indicate:

- Acid Bog Acid Seep Circumneutral Bog Circumneutral Seep Cypress Swamp Dune and Swale
 Fen Forested Fen Forested Swamp Marl Beach Muck Flat Panne Sand Flat Sedge Meadow
 Shrub Swamp Sinkhole Pond Sinkhole Swamp Wet Floodplain Forest Wet Prairie Wet Sand Prairie

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (2).

(2) Does the wetland generally possess the presence of, or habitat for rare, threatened, or endangered species within a ½ mile radius according to the IDNR Natural Heritage Database **AND** the species uses the habitat for any stage of its life cycle? Yes No

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (3).

(3) Is the wetland in an undisturbed or minimally disturbed setting? Yes No

If yes, answer Question (4) and Question (5). If no, please provide a justification as an attachment to this form and proceed to the Wetland Habitat Functional Assessment.

(4) Does the wetland support more than minimal wildlife or aquatic habitat? **Please complete the Habitat Functional Assessment below. If Question 3 and Question 4 are checked yes, the Wetland is Class III.** Yes No

(5) Does the wetland support more than minimal hydrological function? **Please complete the Hydrology Functional Assessment below. If Question 3 and Question 5 are checked yes, the Wetland is Class III.** Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Class III Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class III:

- Checking 'Yes' for Question 1
- Checking 'Yes' for Question 2
- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No
- Does the wetland provide habitat corridors between necessary habitat for mobile, state-listed species? Yes No
- Are there Important Bird Areas (IBA) mapped for the wetland or within a ½ mile radius? Yes No
<https://databasin.org/datasets/fdb91971a11d46d39661f0a56c3585ca/>
- Is the wetland dominated by native species? Yes No
- Does the wetland support multiple layers of species habitat (wading birds, dabblers, reptiles, amphibians, etc.)? Yes No
- Do Rapid Assessment Methods indicate that the wetland supports moderate habitat? Yes No
Indicate which method used:
- Are other moderate habitat indicators present (Explain in Remarks)? Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Wetland Habitat Functional Assessment as a separate attachment appended to this form.

Wetland Hydrology Functional Assessment:

(7) Does the wetland support moderate hydrological function? (see options below) Yes No

Checking yes also meets the requirements of Question 5.

Indicators of moderate hydrological function. At least one primary indicator or two secondary indicators are needed to show moderate hydrological function.

Primary Indicators:

- Wetland meets two or more primary hydrology indicators on the wetland determination data form.
- Wetland is located within a floodway or floodplain.
- Wetland position in the watershed is 1st-3rd order or 4th – 5th order if the substrate is sand or silt.
- Wetland possesses strong hydric soil indicators (gleyed matrix or >20% redox/mottles present).
- Wetland is located within a groundwater Wellhead Protection Area.
<https://www.in.gov/idem/cleanwater/information-about/groundwater-monitoring-and-source-water-protection/wellhead-protection-program/source-water-proximity-determination-tool/>

Secondary Indicators:

- Wetland is 0.75 acre or larger in size, indicating at least moderate water storage capacity.
- Dominant vegetation in wetland is highly adapted to prolonged inundation (FACW, OBL dominance).
- Wetland substrate is sand or silt, indicating higher hydraulic conductivity.
- Wetland is located within a highly developed landscape (>75% impervious surface in ½ mile radius).
- Parcel with wetland is bordered by development, roads, or impervious surfaces.
- Wetland is located within a drinking water Source Water Susceptibility Area.
- Wetland is located within a drinking water Source Water Assessment Area
- Other (Explain in Remarks)

Please include any additional comments, justifications and/or supporting documentation related to the Wetland Hydrology Functional Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class II:

Only Checking 'Yes' to Question (6)

Only Checking 'Yes' to Question (7)

If the Wetland is Class II, check Class II at the top of the form, and the form is now complete.

If the Wetland is not Class III or Class II, check Class I at the top of the form and the form is now complete.

- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No
- Does the wetland provide habitat corridors between necessary habitat for mobile, state-listed species? Yes No
- Are there Important Bird Areas (IBA) mapped for the wetland or within a ½ mile radius? Yes No
<https://databasin.org/datasets/fdb91971a11d46d39661f0a56c3585ca/>
- Is the wetland dominated by native species? Yes No
- Does the wetland support multiple layers of species habitat (wading birds, dabblers, reptiles, amphibians, etc.)? Yes No
- Do Rapid Assessment Methods indicate that the wetland supports moderate habitat? Yes No
Indicate which method used: ORAM
- Are other moderate habitat indicators present (Explain in Remarks)? Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Wetland Habitat Functional Assessment as a separate attachment appended to this form.

Wetland Hydrology Functional Assessment:

(7) Does the wetland support moderate hydrological function? (see options below) Yes No

Checking yes also meets the requirements of Question 5.

Indicators of moderate hydrological function. At least one primary indicator or two secondary indicators are needed to show moderate hydrological function.

Primary Indicators:

- Wetland meets two or more primary hydrology indicators on the wetland determination data form.
- Wetland is located within a floodway or floodplain.
- Wetland position in the watershed is 1st-3rd order or 4th – 5th order if the substrate is sand or silt.
- Wetland possesses strong hydric soil indicators (gleyed matrix or >20% redox/mottles present).
- Wetland is located within a groundwater Wellhead Protection Area.
<https://www.in.gov/idem/cleanwater/information-about/groundwater-monitoring-and-source-water-protection/wellhead-protection-program/source-water-proximity-determination-tool/>

Secondary Indicators:

- Wetland is 0.75 acre or larger in size, indicating at least moderate water storage capacity.
- Dominant vegetation in wetland is highly adapted to prolonged inundation (FACW, OBL dominance).
- Wetland substrate is sand or silt, indicating higher hydraulic conductivity.
- Wetland is located within a highly developed landscape (>75% impervious surface in ½ mile radius).
- Parcel with wetland is bordered by development, roads, or impervious surfaces.
- Wetland is located within a drinking water Source Water Susceptibility Area.
- Wetland is located within a drinking water Source Water Assessment Area
- Other (Explain in Remarks)

Please include any additional comments, justifications and/or supporting documentation related to the Wetland Hydrology Functional Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class II:

Only Checking 'Yes' to Question (6)

Only Checking 'Yes' to Question (7)

If the Wetland is Class II, check Class II at the top of the form, and the form is now complete.

If the Wetland is not Class III or Class II, check Class I at the top of the form and the form is now complete.

State Form 57155 (R / 8-22)

INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

INSTRUCTIONS

- (1) Complete this form when conducting wetland delineations. One form should be completed for each wetland on-site.
- (2) If a wetland meets the definition for multiple wetland classes, the wetland will be classified according to the higher class.
- (3) Submit all completed forms with your wetland delineation and Approved Jurisdictional Determination or official U.S. Army Corps of Engineers correspondence when applying for Waters of the State Determinations or State Regulated Wetland Permits. Additional information regarding how to request Indiana Natural Heritage Data, including fees, required information, and timeframes, is available at <https://www.in.gov/dnr/nature-preserves/heritage-data-center/about-inhdc/>.

Phone Number: (734) 277-3419	Email address: hailey.preston@swca.com	
Project Name: Prairie Creek Wind Project	Wetland ID (per the wetland delineation): WD023	Wetland Size (Acres): 0.02

STATE REGULATED WETLAND CLASSIFICATION: Class I Class II Class III

Class III Assessment

(1) Is the wetland a listed rare or ecologically important type under IC 13-11-2-25.8(3)(B)? Yes No

If yes, please indicate:

- Acid Bog Acid Seep Circumneutral Bog Circumneutral Seep Cypress Swamp Dune and Swale
 Fen Forested Fen Forested Swamp Marl Beach Muck Flat Panne Sand Flat Sedge Meadow
 Shrub Swamp Sinkhole Pond Sinkhole Swamp Wet Floodplain Forest Wet Prairie Wet Sand Prairie

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (2).

(2) Does the wetland generally possess the presence of, or habitat for rare, threatened, or endangered species within a ½ mile radius according to the IDNR Natural Heritage Database AND the species uses the habitat for any stage of its life cycle? Yes No

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (3).

(3) Is the wetland in an undisturbed or minimally disturbed setting? Yes No

If yes, answer Question (4) and Question (5). If no, please provide a justification as an attachment to this form and proceed to the Wetland Habitat Functional Assessment.

(4) Does the wetland support more than minimal wildlife or aquatic habitat? Please complete the Habitat Functional Assessment below. If Question 3 and Question 4 are checked yes, the Wetland is Class III. Yes No

(5) Does the wetland support more than minimal hydrological function? Please complete the Hydrology Functional Assessment below. If Question 3 and Question 5 are checked yes, the Wetland is Class III. Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Class III Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class III:

- Checking 'Yes' for Question 1
- Checking 'Yes' for Question 2
- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No

STATE REGULATED WETLAND CLASSIFICATION: Class I Class II Class III

Class III Assessment

(1) Is the wetland a listed rare or ecologically important type under IC 13-11-2-25.8(3)(B)? Yes No

If yes, please indicate:

- Acid Bog Acid Seep Circumneutral Bog Circumneutral Seep Cypress Swamp Dune and Swale
 Fen Forested Fen Forested Swamp Marl Beach Muck Flat Panne Sand Flat Sedge Meadow
 Shrub Swamp Sinkhole Pond Sinkhole Swamp Wet Floodplain Forest Wet Prairie Wet Sand Prairie

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (2).

(2) Does the wetland generally possess the presence of, or habitat for rare, threatened, or endangered species within a ½ mile radius according to the IDNR Natural Heritage Database **AND** the species uses the habitat for any stage of its life cycle? Yes No

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (3).

(3) Is the wetland in an undisturbed or minimally disturbed setting? Yes No

If yes, answer Question (4) and Question (5). If no, please provide a justification as an attachment to this form and proceed to the Wetland Habitat Functional Assessment.

(4) Does the wetland support more than minimal wildlife or aquatic habitat? **Please complete the Habitat Functional Assessment below. If Question 3 and Question 4 are checked yes, the Wetland is Class III.** Yes No

(5) Does the wetland support more than minimal hydrological function? **Please complete the Hydrology Functional Assessment below. If Question 3 and Question 5 are checked yes, the Wetland is Class III.** Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Class III Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class III:

- Checking 'Yes' for Question 1
- Checking 'Yes' for Question 2
- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No
- Does the wetland provide habitat corridors between necessary habitat for mobile, state-listed species? Yes No
- Are there Important Bird Areas (IBA) mapped for the wetland or within a ½ mile radius? Yes No
<https://databasin.org/datasets/fdb91971a11d46d39661f0a56c3585ca/>
- Is the wetland dominated by native species? Yes No
- Does the wetland support multiple layers of species habitat (wading birds, dabblers, reptiles, amphibians, etc.)? Yes No
- Do Rapid Assessment Methods indicate that the wetland supports moderate habitat? Yes No
Indicate which method used:
- Are other moderate habitat indicators present (Explain in Remarks)? Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Wetland Habitat Functional Assessment as a separate attachment appended to this form.

Wetland Hydrology Functional Assessment:

(7) Does the wetland support moderate hydrological function? (see options below) Yes No

Checking yes also meets the requirements of Question 5.

Indicators of moderate hydrological function. At least one primary indicator or two secondary indicators are needed to show moderate hydrological function.

Primary Indicators:

- Wetland meets two or more primary hydrology indicators on the wetland determination data form.
- Wetland is located within a floodway or floodplain.
- Wetland position in the watershed is 1st-3rd order or 4th – 5th order if the substrate is sand or silt.
- Wetland possesses strong hydric soil indicators (gleyed matrix or >20% redox/mottles present).
- Wetland is located within a groundwater Wellhead Protection Area.
<https://www.in.gov/idem/cleanwater/information-about/groundwater-monitoring-and-source-water-protection/wellhead-protection-program/source-water-proximity-determination-tool/>

Secondary Indicators:

- Wetland is 0.75 acre or larger in size, indicating at least moderate water storage capacity.
- Dominant vegetation in wetland is highly adapted to prolonged inundation (FACW, OBL dominance).
- Wetland substrate is sand or silt, indicating higher hydraulic conductivity.
- Wetland is located within a highly developed landscape (>75% impervious surface in ½ mile radius).
- Parcel with wetland is bordered by development, roads, or impervious surfaces.
- Wetland is located within a drinking water Source Water Susceptibility Area.
- Wetland is located within a drinking water Source Water Assessment Area
- Other (Explain in Remarks)

Please include any additional comments, justifications and/or supporting documentation related to the Wetland Hydrology Functional Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class II:

Only Checking 'Yes' to Question (6)

Only Checking 'Yes' to Question (7)

State Regulated Wetland Class Determination Worksheet

State Form 57155 (R / 8-22)

INDIANA DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

INSTRUCTIONS

- (1) Complete this form when conducting wetland delineations. One form should be completed for each wetland on-site.
- (2) If a wetland meets the definition for multiple wetland classes, the wetland will be classified according to the higher class.
- (3) Submit all completed forms with your wetland delineation and Approved Jurisdictional Determination or official U.S. Army Corps of Engineers correspondence when applying for Waters of the State Determinations or State Regulated Wetland Permits. Additional information regarding how to request Indiana Natural Heritage Data, including fees, required information, and timeframes, is available at <https://www.in.gov/dnr/nature-preserves/heritage-data-center/about-inhdc/>.

Form Completed By:

First Name: Hailey	Last Name: Preston	Agent Affiliation (Company Name): SWCA Environmental Consultants
Phone Number: (734) 277-3419	Email address: hailey.preston@swca.com	
Project Name: Prairie Creek Wind Project	Wetland ID (per the wetland delineation): WB017	Wetland Size (Acres): 0.14

STATE REGULATED WETLAND CLASSIFICATION: Class I Class II Class III

Class III Assessment

(1) Is the wetland a listed rare or ecologically important type under IC 13-11-2-25.8(3)(B)? Yes No

If yes, please indicate:

- Acid Bog Acid Seep Circumneutral Bog Circumneutral Seep Cypress Swamp Dune and Swale
 Fen Forested Fen Forested Swamp Marl Beach Muck Flat Panne Sand Flat Sedge Meadow
 Shrub Swamp Sinkhole Pond Sinkhole Swamp Wet Floodplain Forest Wet Prairie Wet Sand Prairie

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (2).

(2) Does the wetland generally possess the presence of, or habitat for rare, threatened, or endangered species within a ½ mile radius according to the IDNR Natural Heritage Database **AND** the species uses the habitat for any stage of its life cycle? Yes No

If yes, the Wetland is Class III. Check Class III at the top of the form and the form is now complete.

If no, proceed to Question (3).

(3) Is the wetland in an undisturbed or minimally disturbed setting? Yes No

If yes, answer Question (4) and Question (5). If no, please provide a justification as an attachment to this form and proceed to the Wetland Habitat Functional Assessment.

(4) Does the wetland support more than minimal wildlife or aquatic habitat? **Please complete the Habitat Functional Assessment below. If Question 3 and Question 4 are checked yes, the Wetland is Class III.** Yes No

(5) Does the wetland support more than minimal hydrological function? **Please complete the Hydrology Functional Assessment below. If Question 3 and Question 5 are checked yes, the Wetland is Class III.** Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Class III Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class III:

- Checking 'Yes' for Question 1
- Checking 'Yes' for Question 2
- Checking 'Yes' for Question 3 and Question 4
- Checking 'Yes' for Question 3 and Question 5

If the Wetland is Class III, check Class III at the top of the form, complete the appropriate functional assessment on Page 2 (if applicable), and the form is now complete.

Wetland Habitat Functional Assessment:

(6) Does the wetland support moderate habitat? (see options below) Yes No

Checking yes also meets the requirements of Question 4.

One "Yes" response below is needed to show moderate habitat function.

Indicators of moderate habitat function:

- Species of Special Concern within a ½ mile radius of the wetland according to the IDNR Natural Heritage Database **AND** the listed species or a life cycle stage uses wetlands for habitat? Yes No
- Does the wetland provide habitat corridors between necessary habitat for mobile, state-listed species? Yes No
- Are there Important Bird Areas (IBA) mapped for the wetland or within a ½ mile radius? Yes No
<https://databasin.org/datasets/fdb91971a11d46d39661f0a56c3585ca/>
- Is the wetland dominated by native species? Yes No
- Does the wetland support multiple layers of species habitat (wading birds, dabblers, reptiles, amphibians, etc.)? Yes No
- Do Rapid Assessment Methods indicate that the wetland supports moderate habitat? Yes No
Indicate which method used:
- Are other moderate habitat indicators present (Explain in Remarks)? Yes No

Please include any additional comments, justifications, and/or supporting documentation related to the Wetland Habitat Functional Assessment as a separate attachment appended to this form.

Wetland Hydrology Functional Assessment:

(7) Does the wetland support moderate hydrological function? (see options below) Yes No

Checking yes also meets the requirements of Question 5.

Indicators of moderate hydrological function. At least one primary indicator or two secondary indicators are needed to show moderate hydrological function.

Primary Indicators:

- Wetland meets two or more primary hydrology indicators on the wetland determination data form.
- Wetland is located within a floodway or floodplain.
- Wetland position in the watershed is 1st-3rd order or 4th – 5th order if the substrate is sand or silt.
- Wetland possesses strong hydric soil indicators (gleyed matrix or >20% redox/mottles present).
- Wetland is located within a groundwater Wellhead Protection Area.
<https://www.in.gov/idem/cleanwater/information-about/groundwater-monitoring-and-source-water-protection/wellhead-protection-program/source-water-proximity-determination-tool/>

Secondary Indicators:

- Wetland is 0.75 acre or larger in size, indicating at least moderate water storage capacity.
- Dominant vegetation in wetland is highly adapted to prolonged inundation (FACW, OBL dominance).
- Wetland substrate is sand or silt, indicating higher hydraulic conductivity.
- Wetland is located within a highly developed landscape (>75% impervious surface in ½ mile radius).
- Parcel with wetland is bordered by development, roads, or impervious surfaces.
- Wetland is located within a drinking water Source Water Susceptibility Area.
- Wetland is located within a drinking water Source Water Assessment Area
- Other (Explain in Remarks)

Please include any additional comments, justifications and/or supporting documentation related to the Wetland Hydrology Functional Assessment as a separate attachment appended to this form.

Any of the following scenarios indicate the Wetland is Class II:

Only Checking 'Yes' to Question (6)

Only Checking 'Yes' to Question (7)

If the Wetland is Class II, check Class II at the top of the form, and the form is now complete.

If the Wetland is not Class III or Class II, check Class I at the top of the form and the form is now complete.

Dear Megan O'Loughlin:

I am responding to your request for information on the threatened or endangered (T&E) species, high quality natural communities, and natural areas for the Prairie Creek Wind Project (WD029) located within Blackford County, Indiana. The Indiana Natural Heritage Data Center has been checked and there are no T&E species or significant areas documented within 0.5 mile of the project area.

If you need a general environmental review of the project from DNR, you can submit the project information to Christie Stanifer, DNR Environmental Coordinator, at environmentalreview@dnr.in.gov (preferred) or send to the street address below. For more help or guidance contact Christie Stanifer at cstanifer@dnr.in.gov.

1 INTRODUCTION

On behalf of RWE Renewables (RWE), SWCA Environmental Consultants (SWCA) has prepared this wetland and waterbody delineation report for the Prairie Creek Wind Project (project) located in Blackford County, Indiana. The proposed project includes the construction of a utility-scale wind farm. The survey area is approximately 2,623.8 acres (see Figures 1 and 2 in Appendix A).

This report provides the methods, results, and conclusions of a wetland and waterbody delineation that SWCA conducted within the survey area from November 01 – November 04, 2021, November 16 – November 19, 2021, December 06 – December 10, 2021, March 28 – March 31, 2022, May 9 – 10, 2022 and June 27 – 29, 2022. The objectives of this survey were to identify and evaluate jurisdictional wetlands and other waters within the survey area that may be subject to U.S. Army Corps of Engineers (USACE) jurisdiction under Section 404 of the Clean Water Act and the Indiana Department of Environmental Management (IDEM) under Indiana’s State Isolated Wetlands law (Indiana Code 13-18-22). Fieldwork was performed by SWCA wetland ecologists who are trained, practicing delineators with experience in the USACE Midwest region.

2 METHODOLOGY

In accordance with USACE methodology outlined in the *Corps of Engineers Wetlands Delineation Manual* (1987 Manual (USACE 1987) and the *Regional Supplement to the Corps of Engineers Wetlands Delineation Manual: Midwest Region* (Regional Supplement) (USACE 2010), wetlands and other waters were identified and approximated through the combined use of existing publicly available baseline data and field delineation as described below.

2.1 Desktop Analysis

The following publicly available data sources were used to complete a desktop analysis of the survey area to assess the likelihood of wetlands and other waters being present within the survey area.

- Current and historical aerial imagery
- Indiana Department of Natural Resources (IDNR) Indiana Floodplain Information Portal (INFIP; IDNR 2018)
- National Land Cover Database (Multi-Resolution Land Characteristics Consortium 2019)
- Natural Resources Conservation Service (NRCS) Web Soil Survey (NRCS 2022)
- U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory (NWI) mapping (USFWS 2022)
- U.S. Geological Survey (USGS) National Hydrography Dataset (NHD) (USGS 2020)

A farmed wetland determination was performed to determine the presence of farmed wetlands within the survey area. Climate data was used to create a Wetland Evaluation Tables (WETS) (Applied Climate Information System 2022) which classifies each evaluation year as drier than normal, normal, or wetter than normal. Five aerial slides were selected and reviewed to determine if wet signatures were present in agricultural land within the survey area. If wet signatures were identified in over 50% of evaluation years, the area was subject to field verification.

The results of the desktop analysis were used to identify the likely locations of wetlands and waterbodies for the field delineation.

2.2 Field Delineation

SWCA conducted a field evaluation to determine the likely presence or absence of wetlands and other waters in accordance with guidance and information available from the following sources:

- 1987 Manual (USACE 1987)
- Regional Supplement (USACE 2010)
- *Field Indicators of Hydric Soils in the United States, Version 8.2* (NRCS 2018)
- *Clean Water Act Jurisdiction Following the U.S. Supreme Court's Decision in Rapanos v. United States and Carabell v. United States* (U.S. Environmental Protection Agency 2008)
- USACE Regulatory Guidance Letter 05-05: Ordinary High Water Mark Identification (USACE 2005)

The presence or absence of wetlands was determined in the field using routine determination methods outlined in the 1987 Manual and Regional Supplement (USACE 1987, 2010). Wetlands were identified by positive indicators of hydrology, hydrophytic vegetation, and hydric soils. Under normal conditions, all three parameters must be present for an area to be considered a wetland in accordance with Section 404 of the Clean Water Act. Wetland indicator data were collected at specified data points within the survey area, which were used to approximate the wetland boundary and were recorded on USACE Midwest wetland determination data forms. Wetland boundaries were recorded using global positioning system (GPS) units capable of submeter accuracy.

Wetland hydrology was primarily determined in the field by considering the frequency and duration of inundation, visual observation of saturation in the upper 16 inches of the soil profile, and the presence of primary wetland hydrologic indicators (e.g., oxidized rhizospheres on living roots, water-stained leaves, water marks, sediment deposits, or algal matting). Secondary indicators used to determine wetland hydrology include, but are not limited to, surface soil cracks, crayfish burrows, geomorphic position, and drainage patterns. Evidence of these secondary indicators is present even during dry periods, and therefore they are useful indicators of a wetland. If the area sampled displayed one or more primary hydrologic indicators or two or more secondary hydrologic indicators as listed in the 1987 Manual and Regional Supplement, a positive wetland hydrology determination was made (UASCE 1987, 2010).

Rainfall has the most substantial influence on maintaining wetland hydrology. Therefore, it is important to accurately evaluate the normality of rainfall with respect to its influence on wetland hydrology. This was done by employing the Direct Antecedent Rainfall Evaluation Method (DAREM) (Sprecher and Warne 2000). Using the Applied Climate Information System WETS (Applied Climate Information System 2022) as a baseline of normal rainfall for a given month, the DAREM method was applied to assess rainfall by considering the 3-month period prior to the month of the field delineation. Evaluation under these methods classified the condition of the site at the time of the delineation as either drier than normal, normal, or wetter than normal, which was taken into account when identifying wetland hydrology indicators in the field.

Vegetation within each sample plot was identified to the species level, when possible, to identify the plant communities present. Hydrophytic vegetation, which is one parameter of a jurisdictional wetland, is defined as a plant community with over 50% of the dominant plant species ranked as obligate wetland (OBL), facultative wetland (FACW), or facultative (FAC). The appropriate wetland indicator status, as recorded in the National Wetland Plant List: Midwest Region (USACE 2020), was assigned to each plant species. The absolute cover of each plant species within the plot area (2-meter [m] radius plot for herbaceous vegetation, 5-m radius for shrub/vine strata, 15-m radius for tree stratum) was visually

estimated, and then the absolute percent cover was calculated (e.g., each species may be rated up to 100% and the total can be over 100% cover). Then, either the rapid test (i.e., all dominant species across all strata are OBL or FACW), the dominance test (i.e., 50/20 test; > 50% of the total cover represented by plant species combined and including any species > 20% of cover by itself, across all strata are rated OBL, FACW, or FAC), or the prevalence index (i.e., average value of wetland indicator statuses [OBL = 1...upland (UPL) = 5] of all species in the plot, weighted by percent cover, is less than or equal to 3.0) was used to determine the presence or absence of hydrophytic vegetation.

For each data point recorded, a soil test pit was dug to determine the presence or absence of hydric conditions. As defined by the National Technical Committee of Hydric Soils, a hydric soil is a “soil that formed under the conditions of saturation, flooding, or ponding long enough during the growing season to develop anaerobic conditions in the upper part” (NRCS 2015). Common indicators for these non-sandy soils as per the USACE’s manuals (USACE 1987, 2010) include the presence of organic soils, histic epipedon, hydrogen sulfide odor, reduced soil conditions, gleyed soils, or listing on the hydric soils lists. Hydric soil determinations were made according to criteria listed in the Regional Supplement and *Field Indicators of Hydric Soils in the United States, Version 8.2* (NRCS 2018).

Areas meeting the indicators of hydrology, hydrophytic vegetation, and hydric soils were then classified according to the Cowardin system, as described in *Classification of Wetlands and Deepwater Habitats of the United States* (Cowardin et al. 1979). This is a hierarchical system based on the topographic position and vegetation type of a wetland, which aids resource managers and others by providing uniformity of concepts and terms used to define wetlands according to hydrologic, geomorphologic, chemical, and biological factors.

Waterbodies (e.g., lakes, ponds, streams and their associated braids, human-made ditches, and surface flow where the stream bed and bank has been removed by development or agricultural practices) were identified by the presence of an OHWM, which is usually identifiable by indicators such as the level of water present, scouring of the channel, or a vegetation line within the channel (USACE 2005). The OHWM is a defining element for identifying the lateral limits of non-wetland waters. SWCA wetland ecologists recorded the OHWMs or center line of waterbodies encountered during the wetland delineation using GPS units capable of submeter accuracy. Streams were further classified as perennial, intermittent, or ephemeral based on field observations.

3 RESULTS

SWCA conducted a desktop analysis and performed a delineation of potentially jurisdictional waters located within the survey area from November 01 – November 04, 2021, November 16 – November 19, 2021, December 06 – December 10, 2021, March 28 – March 31, 2022, May 9 – 10, 2022 and June 27 – 29, 2022. The following sections summarize the vegetative communities, soils, hydrology, and classification of wetlands and waterbodies within the survey area.

3.1 Desktop Analysis

3.1.1 Landscape Setting

Topography within the survey area slopes north, with the elevation ranging from 256 to 284 meters above mean sea level. A review of the IDNR INFIP indicates that approximately 260 acres of the survey area is located within the Zone A 100-year floodplain (see Figure 3 in Appendix A).

3.1.2 Land Cover

A review of the National Land Cover Database data (Multi-Resolution Land Characteristics Consortium 2019) indicates that land cover within the survey area consists primarily of cultivated crops. The survey area also contained areas identified as deciduous forest, hay/pasture, woody wetlands, herbaceous, emergent herbaceous wetlands, and developed (open space, low intensity, medium intensity, high intensity).

3.1.3 Soils

Twelve soil map units are present within the survey area (Table 1; see Figure 4 in Appendix A) according to the NRCS (2022).

Table 1. Soil Map Units within the Survey Area, Blackford County, Indiana

Map Unit Symbol	Soil Name	Hydric
BIA	Blount-Glynwood, thin solum complex, 0 to 3 percent slopes	No
BleB2	Blount silt loam, end moraine, 1 to 4 percent slopes, eroded	No
Bo	Bono silty clay	Yes
Bs	Bono Variant mucky silty clay	Yes
Ee	Eel clay loam, frequently flooded	No
GleB2	Glynwood silt loam, end moraine, 1 to 4 percent slopes, eroded	No
GlgB2	Glynwood silt loam, ground moraine, 1 to 4 percent slopes, eroded	No
GlpC3	Glynwood clay loam, 6 to 12 percent slopes, severely eroded	No
GlyC3	Glynwood-Mississinewa clay loams, 6 to 12 percent slopes, severely eroded	No
Ho	Houghton muck, drained	Yes
Pm	Pewamo silty clay, 0 to 2 percent slopes	Yes
Wa	Wallkill Variant silty clay, frequently flooded	Yes

Source: NRCS (2022)

3.1.4 Hydrology

Precipitation data from the National Weather Service’s Hartford City (Blackford County), Indiana, station, which is approximately seven miles east of the survey area, was used to determine the baseline of normal rainfall over the survey area in November 2021, December 2021, March 2022, May 2022, and June 2022 (Applied Climate Information System 2022). This was compared with the DAREM calculations data for Blackford County, Indiana, for the 3 months prior to the field surveys. The DAREM calculations for the 3 months prior to each survey were calculated using observed rainfall data and comparative WETS data (Table 2). Based on these calculations, the 3-month time period was found to have wetter than normal precipitation patterns in November 2021 and June 2022 and normal precipitation patterns in December 2021, March 2022, and May 2022.

Table 2. Rainfall Summary for Blackford County, Indiana

Prior Month	WETS Rainfall Percentile (inches)		Measured Rainfall (inches)	Evaluation Month: November 2021		
	30th	70th		Condition ^a	Month Weight ^b	Score ^c
October	2.74	4.97	6.36	3	3	9

Source: Applied Climate Information System (2022)

^a Condition values are 1 for <30th percentile, 2 for between 30th and 70th percentile, 3 for >70th percentile

^b Month weight is 3 for the most recent month prior, 2 for the second month prior, and 1 for the third month prior

^c Score is the product of the condition and month weight

^d Description: Drier than normal (sum is 6–9), normal (sum is 10–14), wetter than normal (sum is 15–18)

3.1.5 National Wetlands Inventory

SWCA reviewed the USFWS NWI mapping data to determine the potential presence of wetland and waterbody features within the survey area (USFWS 2022). NWI wetlands are classified according to the Cowardin System, as described in *Classification of Wetlands and Deepwater Habitats of the United States* (Cowardin et al. 1979). The NWI identified 63 mapped features within the survey area: nineteen emergent, eighteen forested/shrub, 25 riverine, and one freshwater pond (see Figure 3 in Appendix A).

3.1.6 National Hydrography Dataset

SWCA reviewed USGS NHD mapping to determine the potential presence of streams and waterbodies within the survey area (USGS 2020). The NHD data suggests the presence of 475 mapped streams and ten waterbodies within the survey area (see Figure 3 in Appendix A).

3.1.1 Farmed Wetland Determination

SWCA selected five years; 2019, 2016, 2015, 2014, and 2005, and reviewed the aerial photographs from those years to determine if wet signatures were repeatedly present within the wetlands identified as farmed wetlands in the survey area. The WETS tables used for this determination are located in Appendix B. From this review, SWCA determined that 26 wetlands within the survey area could be potentially farmed wetlands. Farmed wetlands located in the survey area are identified in Table 3.

3.2 Field Delineation

SWCA conducted the field delineation on November 01 – November 04, 2021, November 16 – November 19, 2021, December 06 – December 10, 2021, March 28 – March 31, 2022, May 9 – 10, 2022 and June 27 – 29, 2022, to assess the general site characteristics, ground-truth any mapped features identified during the desktop analysis, assess the likelihood of wetland presence in areas mapped as hydric soils, and delineate the boundaries of all features determined to be present. Wetland delineation data forms are provided in Appendix C. Photographs of delineated aquatic features are provided in Appendix D.

3.2.1 Wetlands

SWCA delineated 65 distinct wetland areas, totaling 59.19 acres within the survey area. Of these 65 wetlands, 36 were palustrine emergent (PEM), sixteen were palustrine forested (PFO), two were palustrine scrub/shrub (PSS), eight were PEM/PFO, one was PEM/PSS, one was PEM/PSS/PFO, and one was PEM/PSS/PFO/PUB. These features are depicted in Figure 5 in Appendix A and detailed in Table 3.

*This determination is SWCA's professional opinion of USACE and IDEM jurisdictional status of each feature under Section 404 of the Clean Water Act (CWA) and IDEM's State Isolated Wetlands law (Indiana Code 13-18-22).

†PEM = palustrine emergent; PSS = palustrine scrub-shrub; PFO = palustrine forested; PUB = palustrine unconsolidated bottom

*Denotes farmed wetland. Wetlands WB005 and WC006 are actively farmed wetlands with areas in the delineated boundary that are unfarmed, vegetated PEM wetland community.

3.2.1.1 VEGETATION COMMUNITIES

SWCA observed seven vegetation community types within the survey area including three wetland communities (i.e., PEM, PSS, PFO) and four non-wetland/upland communities (i.e., herbaceous, agricultural, sapling/shrub, forested). The species identified at each data point along with their areal coverage were recorded on the data forms in Appendix C. A photographic log of the vegetation communities observed within the survey area is provided in Appendix D. The dominant species identified within each vegetation community type are listed in the following sections.

3.2.1.1.1 Palustrine Emergent Wetland

The PEM wetland community consisted of a prevalence of hydrophytic non-woody vegetation and woody plants less than 1 meter in height. Dominant herbaceous species included reed canary grass (*Phalaris arundinacea*), yellow bristle grass (*Setaria pumila*), soybean (*Glycine max*), common wheat (*Triticum aestivum*), common morning-glory (*Ipomoea purpurea*), rough-fruit amaranth (*Amaranthus tuberculatus*), cress-leaf groundsel (*Packera glabella*), swamp smartweed (*Persicaria hydropiperoides*), large barnyard grass (*Echinochloa crus-galli*), common fox sedge (*Carex vulpinoidea*), fall panic grass (*Panicum dichotomiflorum*), rough cocklebur (*Xanthium strumarium*), and late goldenrod (*Solidago gigantea*).

3.2.1.1.2 Palustrine Scrub-Shrub Wetland

The PSS wetland community consisted of woody plants less than 3 inches diameter at breast height and greater than 1 meter tall. Dominant shrub species included American elm (*Ulmus americana*), gray dogwood (*Cornus racemosa*), green ash (*Fraxinus pennsylvanica*), sandbar willow (*Salix interior*), and red osier (*Cornus alba*). Dominant herbaceous species in the PSS wetland community included late goldenrod, Virginia wild rye (*Elymus virginicus*), and lakebank sedge (*Carex lacustris*).

3.2.1.1.3 Palustrine Forested Wetland

The PFO wetland community consisted of a prevalence of hydrophytic woody vegetation with a diameter at breast height of 3 inches or greater, regardless of height. Dominant tree species included American elm, green ash, silver maple (*Acer saccharinum*), pin oak (*Quercus palustris*), shell-bark hickory (*Carya laciniata*), common hackberry (*Celtis occidentalis*), red maple (*Acer rubrum*), eastern cottonwood (*Populus deltoides*), downy hawthorn (*Crataegus mollis*), black willow (*Salix nigra*), European alder (*Alnus glutinosa*), swamp white oak (*Quercus bicolor*), burr oak (*Quercus macrocarpa*), and American hornbeam (*Carpinus caroliniana*). Dominant shrub species in the PFO wetland community included

American elm, shell-bark hickory, green ash, downy hawthorn, gray dogwood, sandbar willow, American hornbeam, amur honeysuckle (*Lonicera maackii*), northern spicebush (*Lindera benzoin*), red osier (*Cornus alba*), American elm, European buckthorn (*Rhamnus cathartica*), and common buttonbush (*Cephalanthus occidentalis*). Dominant herbaceous species in the PFO wetland community included amur honeysuckle, reed canary grass, Virginia wild rye, late goldenrod, lakebank sedge, creeping-jenny (*Lysimachia nummularia*), Canadian black-snakeroot (*Sanicula canadensis*), farewell-summer (*Symphotrichum lateriflorum*), cottongrass bulrush (*Scirpus cyperinus*), Bailey's sedge (*Carex baileyi*), Shawnee-salad (*Hydrophyllum virginianum*), sweet wood-reed (*Cinna arundinacea*), Indian-hemp (*Apocynum cannabinum*), freshwater cord grass (*Spartina pectinata*), Canadian honewort (*Cryptotaenia canadensis*), narrow-leaf cat-tail (*Typha angustifolia*), pinkweed (*Persicaria pensylvanica*), brome-like sedge (*Carex bromoides*), and garlic-mustard (*Alliaria petiolata*). Dominant woody vine species in the PFO wetland community included eastern poison ivy (*Toxicodendron radicans*).

3.2.1.1.4 Herbaceous Upland

The herbaceous upland community consisted of non-wetland areas dominated by non-woody vegetation and woody plants less than 1 meter in height. Dominant herbaceous species included Japanese bristle grass (*Setaria faberi*), smooth brome (*Bromus inermis*), tall goldenrod (*Solidago altissima*), lesser poverty rush (*Juncus tenuis*), tall false rye grass (*Schedonorus arundinaceus*), and Kentucky blue grass (*Poa pratensis*).

3.2.1.1.5 Agricultural Upland

The agricultural upland community consisted of cultivated cropland. Dominant herbaceous species included soybean, common wheat, yellow bristle grass, corn (*Zea mays*), common chickweed (*Stellaria media*), field pumpkin (*Cucurbita pepo*), careless weed (*Amaranthus palmeri*), groundivy (*Glechoma hederacea*), round-leaf groundsel (*Packera obovata*), purple deadnettle (*Lamium purpureum*), white clover (*Trifolium repens*), garden vetch (*Vicia sativa*), creeping buttercup (*Ranunculus repens*), hairy crab grass (*Digitaria sanguinalis*), Queen Annes-lace (*Daucus carota*), and Canadian thistle (*Cirsium arvense*).

3.2.1.1.6 Sapling/Shrub Upland

The sapling/shrub upland community consisted of non-wetland areas dominated by woody plants less than 3 inches diameter at breast height and greater than 1 meter tall. The dominant shrub species included gray dogwood and Siberian elm (*Ulmus pumila*). Dominant herbaceous species within the sapling/shrub upland community consisted of tall goldenrod and woodland strawberry (*Fragaria vesca*).

3.2.1.1.7 Forested Upland

The forested upland community consisted of non-wetland areas dominated by woody vegetation with 3 inches DBH or greater, regardless of height. Dominant tree species included common hackberry, northern red oak (*Quercus rubra*), northern white oak (*Quercus alba*), tuliptree (*Liriodendron tulipifera*), shag-bark hickory (*Carya ovata*), pignut hickory (*Carya glabra*), white mulberry (*Morus alba*), sugar maple (*Acer saccharum*), black oak (*Quercus velutina*), and American basswood (*Tilia americana*). Dominant sapling/shrub species in the forested upland community included gray dogwood, pignut hickory, white mulberry, common hackberry, sugar maple, American beech (*Fagus grandifolia*), morrows honeysuckle (*Lonicera morrowii*), eastern red-cedar (*Juniperus virginiana*), eastern hop-hornbeam (*Ostrya virginiana*), amur honeysuckle (*Lonicera maackii*), and white ash (*Fraxinus americana*). Dominant herbaceous species in the forested upland community included woodland strawberry, morrows honeysuckle, white ash, spotted cranes-bill (*Geranium maculatum*), creeping wild rye (*Elymus repens*),

white panicle American-aster (*Symphyotrichum lanceolatum*), white snakeroot (*Ageratina altissima*), nodding wild rye (*Elymus canadensis*), Rambler rose (*Rosa multiflora*), Virginia-creeper (*Parthenocissus quinquefolia*), Canadian wild ginger (*Asarum canadense*), short's aster (*Symphyotrichum shortii*), white avens (*Geum canadense*), dutchman's breeches (*Dicentra cucullaria*), and bloody-butcher (*Trillium recurvatum*). Dominant woody vine species in the forested upland community included summer grape (*Vitis aestivalis*).

3.2.1.2 HYDROLOGY

Primary wetland hydrology indicators observed in the survey area included Surface Water (A1) High Water Table (A2), Saturation (A3), Drift Deposits (B3), Water Marks (B1), Sediment Deposits (B2), Algal Mat or Crust (B4), Inundation Visible on Aerial Imagery (B7), Sparsely Vegetated Concave Surface (B8), Water-Stained Leaves (B9), Aquatic Fauna (B13), Hydrogen Sulfide Odor (C1), Oxidized Rhizospheres on Living Roots (C3), and Thin Muck Surface (C7). Secondary wetland hydrology indicators observed in the survey area included Surface Soil Cracks (B6), Drainage Patterns (B10), Crayfish Burrows (C8), Saturation Visible on Aerial Imagery (C9), Stunted or Stressed Plants (D1), Geomorphic Position (D2), and a positive FAC-Neutral Test (D5) (see Appendix C).

3.2.1.3 HYDRIC SOIL INDICATORS

Hydric soil indicators observed in the survey area included Histosol (A1), Black Histic (A3), Hydrogen Sulfide (A4), 2 cm Muck (A10), Depleted Below Dark Surface (A11), Thick Dark Surface (A12), Depleted Matrix (F3), Redox Dark Surface (F6), and Depleted Dark Surface (F7) (see Appendix C).

3.2.2 Streams

SWCA delineated a total of 72 waterways, totaling 37,510.22 linear feet within the survey area. Of the delineated streams, 36 are perennial, three are intermittent, nine are ephemeral, three are ditches, 14 are drainageways, and seven areas of surface flow. All features are depicted in Figure 5 in Appendix A and detailed in Table 4. Photographs of select waterways are provided in Appendix D.

*This determination is SWCA's professional opinion of USACE and IDEM jurisdictional status of each feature under Section 404 of the CWA and IDEM's State Isolated Wetlands law (Indiana Code 13-18-22).

4 CONCLUSIONS

SWCA conducted field investigations of the survey area on November 01 – November 04, 2021, November 16 – November 19, 2021, December 06 – December 10, 2021, March 28 – March 31, 2022, May 9 – 10, 2022 and June 27 – 29, 2022. SWCA wetland ecologists identified 65 wetlands and 72 streams.

The conclusions provided in this report represent SWCA's professional opinion based on SWCA's knowledge and experience with the USACE and IDEM, including the USACE's regulatory guidance documents and manuals, and the state of Indiana's isolated wetlands rule. The USACE has final authority in determining the status and presence of jurisdictional Waters of the U.S. (WOTUS) and the extent of their boundaries. IDEM has final authority in determining the status and presence of Waters of the State and the extent of their boundaries.

Dry = 1
Normal = 2
Wet = 3

TYPE OF YEAR

Dry = 6 to 9
Normal = 10 to 14
Wet = 15 to 18

COMMENTS: Could not find a third normal year with aerial photos until March 2005.

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind Project City/County: Blackford County Sampling Date: 11/01/2021

Applicant/Owner: RWE State: IN Sampling Point: DPA001 PEM

Investigator(s): A. Sheets Section, Township, Range: Sec. 03 T24N R10E

Landform (hillslope, terrace, etc.): Semi-Open Depression Local relief (concave, convex, none): Concave

Slope (%): 0-5% Lat: 40.5579 Long: -85.3845 Datum: NAD83

Soil Map Unit Name: GlgB2 - Glynwood silt loam, ground moraine, 1 to 4 percent slopes, eroded NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input checked="" type="checkbox"/>	No: <input type="checkbox"/>	Is the Sampled Area within a Wetland?	
Hydric Soil Present?	Yes: <input checked="" type="checkbox"/>	No: <input type="checkbox"/>		Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Wetland Hydrology Present?	Yes: <input checked="" type="checkbox"/>	No: <input type="checkbox"/>		
Remarks: Associated with WA001				

VEGETATION - Use scientific names of plants.

Remarks:

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind Project City/County: Blackford County Sampling Date: 11/01/2021

Applicant/Owner: RWE State: IN Sampling Point: DPA002 UPL

Investigator(s): A. Sheets Section, Township, Range: Sec. 03 T24N R10E

Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Linear Slope

Slope (%): 0-5% Lat: 40.5577 Long: -85.3843 Datum: NAD83

Soil Map Unit Name: GlgB2 - Glynwood silt loam, ground moraine, 1 to 4 percent slopes, eroded NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes: <input checked="" type="checkbox"/>	No: <input type="checkbox"/>			
Wetland Hydrology Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>			
Remarks: Associated with WA001. Disturbance from soybean production .					

VEGETATION - Use scientific names of plants.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind Project City/County: Blackford Sampling Date: 11/01/2021

Applicant/Owner: RWE State: IN Sampling Point: DPA003 PFO

Investigator(s): A. Sheets Section, Township, Range: Sec. 03 T24N R10E

Landform (hillslope, terrace, etc.): Semi-Open Depression Local relief (concave, convex, none): Concave

Slope (%): 0-5% Lat: 40.5582 Long: -85.3846 Datum: NAD83

Soil Map Unit Name: GlgB2 - Glynwood silt loam, ground moraine, 1 to 4 percent slopes, eroded NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input checked="" type="checkbox"/>	No: <input type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>

Landform (hillslope, terrace, etc.): Hill Local relief (concave, convex, none): Convex

Slope (%): 0-5% Lat: 40.557 Long: -85.3656 Datum: NAD83

Soil Map Unit Name: GlgB2 - Glynwood silt loam, ground moraine, 1 to 4 percent slopes, eroded NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?		
Hydric Soil Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>		Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Wetland Hydrology Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>			
Remarks: Tilled and drained agricultural field. No wetland association.

Hydrophytic Vegetation Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Hydric Soil Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Wetland Hydrology Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: Associated with WA007. DPB024_PEM is also located in this wetland area. Tilled, drained, and planted in parts of wetland. Due to inundation, soil conditions were not able to be assessed at the time of the delineation. A review of historic aerial imagery through present day shows consistent saturation of the area and failed attempts to put the area into farm production.

Remarks: (Include photo numbers here or on a separate sheet.) Problematic Vegetation: Wetland is very heavily impacted by adjacent agricultural uses including nutrient and herbicide inputs that have affected the species within the wetland.																												

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind Project City/County: Blackford Sampling Date: 11/02/2021

Applicant/Owner: RWE State: IN Sampling Point: DPA021 UPL

Investigator(s): A. Sheets Section, Township, Range: Sec. 17 T24N R10E

Landform (hillslope, terrace, etc.): Plain Local relief (concave, convex, none): Linear Slope

Slope (%): 0-5% Lat: 40.5283 Long: -85.423 Datum: NAD83

Soil Map Unit Name: Bo - Bono silty clay NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?		
Hydric Soil Present?	Yes: <input checked="" type="checkbox"/>	No: <input type="checkbox"/>		Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Wetland Hydrology Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>			
Remarks: Associated with WA007. Tilled, drained, and planted.					

VEGETATION - Use scientific names of plants.

---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind Project City/County: Blackford Sampling Date: 11/03/2021

Applicant/Owner: RWE State: IN Sampling Point: DPA032 UPL

Investigator(s): A. Sheets Section, Township, Range: Sec. 28 T24N R10E

Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave

Slope (%): 0-5% Lat: 40.5083 Long: -85.3895 Datum: NAD83

Soil Map Unit Name: GlgB2 - Glynwood silt loam, ground moraine, 1 to 4 percent slopes, eroded NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Hydric Soil Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Wetland Hydrology Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: Farmed wetland signatures were not observed on >50% of the historic aerials during the farmed wetland determination review. Therefore, this area does not meet the requirements for a farmed wetland designation.	

VEGETATION - Use scientific names of plants.

Project/Site: Prairie Creek Wind Project City/County: Blackford Sampling Date: 11/03/2021

Applicant/Owner: RWE State: IN Sampling Point: DPA034 UPL

Investigator(s): A. Sheets Section, Township, Range: Sec. 27 T24N R10E

Landform (hillslope, terrace, etc.): Plain Local relief (concave, convex, none): None

Slope (%): 0-5% Lat: 40.5052 Long: -85.3765 Datum: NAD83

Soil Map Unit Name: Bo - Bono silty clay NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?		
Hydric Soil Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>		Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Wetland Hydrology Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>			
Remarks: No associated wetland. Tilled, drained, and planted.					

VEGETATION - Use scientific names of plants.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind Project City/County: Blackford County Sampling Date: 11/03/2021

Applicant/Owner: RWE State: IN Sampling Point: DPB003 PFO

Investigator(s): H. Preston Section, Township, Range: Sec. 29 T24N R10E

Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave

Slope (%): <5% Lat: 40.5061 Long: -85.4221 Datum: NAD83

Soil Map Unit Name: BIA - Blount-Glynwood, thin solum complex, 0 to 3 percent slopes NWI classification: PFO1A

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Hydric Soil Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Wetland Hydrology Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: Located in wetland WB001.

Remarks:

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind City/County: Blackford County Sampling Date: 12/06/2021

Applicant/Owner: RWE State: IN Sampling Point: DPB024 PEM

Investigator(s): H. Preston, M. O'Loughlin Section, Township, Range: Sec. 17 T24N R10E

Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave

Slope (%): <5% Lat: 40.5295 Long: -85.4227 Datum: NAD83

Soil Map Unit Name: Ho - Houghton muck, drained NWI classification: PEM1C

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Hydric Soil Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Wetland Hydrology Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: Located in wetland WA007.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind City/County: Blackford County Sampling Date: 12/07/2021

Applicant/Owner: RWE State: IN Sampling Point: DPB037_PFO

Investigator(s): H. Preston, M. O'Loughlin Section, Township, Range: Sec. 32 T24N R10E

Landform (hillslope, terrace, etc.): Flat Local relief (concave, convex, none): None

Slope (%): <5% Lat: 40.4905 Long: -85.4259 Datum: NAD83

Soil Map Unit Name: Pm - Pewamo silty clay, 0 to 2 percent slopes NWI classification: PFO1A

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Hydric Soil Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Wetland Hydrology Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: Located in wetland WB008.

Project/Site: Prairie Creek Wind City/County: Blackford County Sampling Date: 12/08/2021

Applicant/Owner: RWE State: IN Sampling Point: DPB045 UPL

Investigator(s): H. Preston, M. O'Loughlin Section, Township, Range: Sec. 24 T24N R10E

Landform (hillslope, terrace, etc.): Flat Local relief (concave, convex, none): None

Slope (%): <5% Lat: 40.5151 Long: -85.3331 Datum: NAD83

Soil Map Unit Name: Pm - Pewamo silty clay, 0 to 2 percent slopes NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind City/County: Blackford County Sampling Date: 12/09/2021

Applicant/Owner: RWE State: IN Sampling Point: DPB062 UPL

Investigator(s): H. Preston, M. O'Loughlin Section, Township, Range: Sec. 03 T24N R10E

Landform (hillslope, terrace, etc.): Hillslope Local relief (concave, convex, none): Convex

Slope (%): <5% Lat: 40.5554 Long: -85.3841 Datum: NAD83

Soil Map Unit Name: GlgB2 - Glynwood silt loam, ground moraine, 1 to 4 percent slopes, eroded NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind City/County: Blackford County Sampling Date: 12/09/2021

Applicant/Owner: RWE State: IN Sampling Point: DPB064 PFO

Investigator(s): H. Preston, M. O'Loughlin Section, Township, Range: Sec. 03 T24N R10E

Landform (hillslope, terrace, etc.): Depression Local relief (concave, convex, none): Concave

Slope (%): <5% Lat: 40.5576 Long: -85.3775 Datum: NAD83

Soil Map Unit Name: Pm - Pewamo silty clay, 0 to 2 percent slopes NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Hydric Soil Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/> Wetland Hydrology Present? Yes: <input checked="" type="checkbox"/> No: <input type="checkbox"/>	Is the Sampled Area within a Wetland? Yes <input checked="" type="checkbox"/> No <input type="checkbox"/>
Remarks: Located in wetland WC006.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

WETLAND DETERMINATION DATA FORM — Midwest Region

Project/Site: Prairie Creek Wind City/County: Blackford County Sampling Date: 12/09/2021

Applicant/Owner: RWE State: IN Sampling Point: DPB067 UPL

Investigator(s): H. Preston, M. O'Loughlin Section, Township, Range: Sec. 28 T24N R10E

Landform (hillslope, terrace, etc.): Flat Local relief (concave, convex, none): None

Slope (%): <5% Lat: 40.5081 Long: -85.3923 Datum: NAD83

Soil Map Unit Name: Pm - Pewamo silty clay, 0 to 2 percent slopes NWI classification: No

Are climatic / hydrologic conditions on the site typical for this time of year? Yes No (If no, explain in Remarks.)

Are Vegetation , Soil , or Hydrology significantly disturbed? Are "Normal Circumstances" present? Yes No

Are Vegetation , Soil , or Hydrology naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS — Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>	Is the Sampled Area within a Wetland?	Yes <input type="checkbox"/>	No <input checked="" type="checkbox"/>
Hydric Soil Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>			
Wetland Hydrology Present?	Yes: <input type="checkbox"/>	No: <input checked="" type="checkbox"/>
