**EXECUTIVE SUMMARY**

In accordance with the Indiana Brownfields Program (IBP) and United States Environmental Protection Agency (EPA) approved Sampling and Analysis Plan (SAP) dated March 28, 2024, Industrial Waste Management Consulting Group, LLC (IWM Consulting) conducted a Phase II Environmental Site Assessment (ESA) of the Norfolk & Western Railroad property located at South 5<sup>th</sup> Street and 5th Street Northeast in Lafayette, Tippecanoe County, Indiana (site). This assessment was conducted to determine the presence/absence, nature, and potential extent of surface and subsurface contamination due to historical activities or operations conducted at or in the immediate vicinity of the site. The environmental investigation was completed between April 15 and May 6, 2024.

The following is a summary of the report. Please refer to the full text of this report in its entirety for a comprehensive understanding of the information presented in this Executive Summary, as specifics are not fully discussed in this section.

**Phase II ESA Activities Summary & Recommendations**

On April 15 through May 6, 2024, IWM Consulting supervised a ground penetrating radar (GPR) survey, the installation of five soil borings (NW-SB01 through NW-SB05), and installation and sampling of three exterior soil vapor probes (NW-SGe01 through NW-SGe03) to determine the presence/absence, nature and potential extent of surface and subsurface contamination due to historical activities or operations conducted at the site or in the immediate vicinity of the site. A total of 20 surface, near-surface, and subsurface soil samples, and five groundwater samples were collected for laboratory analysis [not including quality assurance/quality control (QA/QC) samples]. Additionally, two shallow exterior soil vapor (SGe) samples were able to be analyzed by the laboratory.

**Soil Summary**

All volatile organic compound (VOC) and polycyclic aromatic hydrocarbons (PAH) constituents were reported at concentrations below either their most stringent established Risk-Based Closure Guide (R2) Published Levels or the laboratory reporting limits in all surface, near-surface, and subsurface soil samples collected.

Arsenic was detected at a concentration above the R2 Residential Soil Published Level (RSPL) of 10 mg/kg, but below the R2 Commercial Soil Published Level (CSPL) of 30 mg/kg and Recreational Soil Published Level for a Community Park [Rec SPL (Park)] of 40 mg/kg, in four near surface soil samples and one surface soil sample. All other reported arsenic concentrations were below the R2 RSPL.

Lead was detected at a concentration above the RSPL of 400 mg/kg, but below the CSPL and Rec SPL (Park) of 800 mg/kg, in one near-surface soil sample collected [NW-SL-SB03 (3-4.5')]. All other reported lead

concentrations were below the RSPL.

#### Groundwater Summary

All VOCs and PAHs were reported at concentrations below the laboratory reporting limits.

Total lead and arsenic were reported above their respective R2 Groundwater Published Levels (GWPLs), however, dissolved lead and arsenic concentrations were below their respective GWPLs. This is most likely the result of turbidity in the samples and the temporary nature of the monitoring wells being that they were undeveloped.

#### Exterior Soil Vapor Summary

Only two SGe samples were sufficient for laboratory analysis. A total of 18 separate VOCs were detected in the SGe samples, however, no contaminants were detected in any SGe samples at concentrations exceeding their respective R2 Residential Shallow Soil Gas Published Levels (RSGPLs). Of note, tetrachloroethylene (PCE) was detected in samples NW-SGe03 and NW-SGe-FD1, however, PCE was not detected in any soil or groundwater samples collected from the site.

#### Conclusions

No VOC or PAH constituents were detected in the near surface or subsurface soils, groundwater, or exterior soil vapor above a published level at the site.

Arsenic and lead were detected in multiple near-surface and surface soil samples above their RSPLs but below commercial or recreational published levels. The residential published level is a conservative estimate that is known to be safe where children are present and exposure is continual. It is not expected that future use of the site will involve continual soil exposure. Its current use is as a “greenspace” adjacent to a community park. Should future use involve multi-family residential use, CSPLs would apply to property use.

The SGe results indicate no potential for vapor intrusion into future structures at the site of both petroleum constituents and chlorinated solvents above a residential published level for indoor air. Although only two SGe samples were able to be analyzed and a data gap exists in the center of the site, IDEM will typically expect vapor intrusion investigations at occupied structures if those structures are within 100 feet of a potential soil source of vapors, or underlain by or in contact with groundwater exceeding IDEM’s published groundwater levels for VOCs. No groundwater plume is evident at the site and VOCs were not detected in the soils at the site.

Based on the results of the soil, groundwater, and soil gas samples collected, redevelopment of this property for commercial or recreational purposes appears to be unencumbered.

## 1.0 INTRODUCTION

In accordance with the Indiana Brownfields Program (IBP) and United States Environmental Protection Agency (EPA) approved Sampling and Analysis Plan (SAP) dated April 3, 2024, Industrial Waste Management Consulting Group, LLC (IWM Consulting) conducted a Phase II Environmental Site Assessment (ESA) of the Norfolk & Western Railroad property located at South 5<sup>th</sup> Street and 5th Street Northeast in Lafayette, Tippecanoe County, Indiana (site). The objective of this assessment was to determine the presence/absence, nature, and potential extent of surface and subsurface contamination due to historical activities or operations conducted at the site or in the immediate vicinity of the site. The environmental investigation was completed between April 15 and May 6, 2024.

Please refer to the following sections of this report for a comprehensive understanding of the information presented in this Phase II ESA Report, as specifics are fully discussed in the following sections.

## 2.0 SITE BACKGROUND/HISTORY

The site is a narrow strip of land between Lingle Avenue and South 5<sup>th</sup> Street in Lafayette, Tippecanoe County, Indiana as indicated on **Figure 1 (Site Location Map)**. The site is generally rectangular in shape and contains a total of approximately 0.37 acres on one parcel. The site is currently vacant and used as a “greenspace” which is owned by the City of Lafayette. It is adjacent to a park (Triangle Park), that borders the site to the west-northwest. In addition to the park to the west-northwest, the site is bordered by residential areas to the north, east, and southeast and by South 5<sup>th</sup> Street, followed by a residential area to the west. A map depicting the surrounding area of the site is included as **Figure 2 (Site Map)**.

IWM Consulting reviewed publicly available information in the Indiana Department of Environmental Management’s (IDEM) Virtual File Cabinet (VFC) and available files related to the site. No known assessment activities have been conducted on the site.

Historic Sanborn maps show multiple railroad tracks on the site until at least 1999. In 2007, the railroad tracks were no longer present. Additionally, historic Sanborn maps and city directories show the adjacent Triangle Park property was used as a corn mill, as well as a coal and oil distribution company. The other surrounding properties are all residential with dwellings.

The EDR Radius Report listed several nearby former drycleaners including Buckles Laundry (aka Runk's 4th Street Laundry, Bennett's Laundry, Cripe's Laundry & Dry Cleaning, and Wesner's Coin Operated Laundry), located at 415 South 4<sup>th</sup> Street; Crown Laundry, located at 220 South 4<sup>th</sup> Street and 320 South 4<sup>th</sup> Street; and Lafayette Linen Supply, located at 228 South 4<sup>th</sup> Street, in the Indiana Drycleaners database. Although these drycleaners appear to have no reported releases or spills, their proximity (approximately 600 to 700 feet) and the potential for vapors to move in all directions via preferential pathways (utility conduits) results in these sites being considered a Recognized Environmental Condition (REC) and pose a potential Vapor Encroachment Condition (VEC) for the site.

## 3.0 POTENTIAL AND KNOWN CONTAMINANTS OF CONCERN (COCs)

Based upon the historical information obtained regarding the subject site, the former uses of the site and surrounding property uses, the following potential contaminants of concern (COCs) were characterized during the Phase II ESA activities:

- Volatile organic compounds (VOCs) using SW-846 Method 8260 (soil and groundwater);
- VOCs using SW-846 Method TO-15 (soil gas only)
- Polycyclic aromatic hydrocarbons (PAHs) using SW-846 Method 8270 SIM (soil and groundwater);
- Resource Conservation and Recovery Act (RCRA) 8 Metals using SW-846 Method 6010/7471 (soil only);
- Total/Dissolved RCRA 8 Metals using SW-846 Method 6010/7470 (groundwater only); and,
- Percent moisture (soil only).

## 4.0 PROPOSED REUSE OF SITE AND REGULATORY GUIDANCE

IWM Consulting currently recognizes that the future use of the site is potentially as a multi-family residential area for redevelopment. Residential properties are also located adjacent to the site. Soil, groundwater, and soil gas results were compared to the most recent version of Table 1 from Appendix A of the IDEM's *Risk-Based Closure Guide* (R2) which provides several default published levels (PLs) for various COCs relating to human health residential exposure scenarios including Residential Soil PLs (RSPLs), Community Park Recreational Soil PLs [Rec SPLs (Park)], Commercial Soil PLs (CSPLs), Groundwater PLs (GWPLs), and Residential Soil Gas PLs (RSGPLs).

## 5.0 SCOPE OF WORK & METHODOLOGIES

### 5.1 Proposed Scope of Work

Per the approved SAP, IWM Consulting conducted the following scope of work:

- Performed a geophysical survey of the site to clear boring locations of possible underground utilities and attempt to locate former or current utility corridors;
- Located all sample locations with a Global Positioning System (GPS) unit so they may be properly mapped and located in the future, if necessary;
- Installed five soil borings (NW-SB01 through NW-SB05) on the site to investigate potential near-surface and subsurface soil and groundwater impacts from historical on- and off-site activities;
- Converted the soil borings into temporary 2-inch diameter temporary monitoring wells (NW-GP01 through NW-GP05) using 10 feet of 0.010-inch slotted polyvinyl chloride (PVC) screen and varying lengths of PVC casing (dependent upon the actual depth of each boring) to obtain groundwater samples;
- Collected 10 surface soil samples (NW-SS01 through NW-SS10) on the site to investigate potential surface soil impacts from historical backfilling, property uses, or illegal dumping;
- Surveyed the top of casing (TOC) of the temporary monitoring wells and gauged groundwater elevations to determine the groundwater flow direction at the site;

- Low-flow groundwater sampled the temporary monitoring wells to evaluate the potential presence of COCs at the site; and
- Installed and sampled three exterior soil vapor (NW-SGe01 through NW-SGe03) probes at locations across the site to evaluate for potential vapor intrusion risks.

The above scope of work was successfully completed (with limited exceptions) as discussed in the following sections of this report. Site features, utility lines, and boring locations are illustrated in **Figure 2 (Site Map)**.

## **5.2 Geophysical Survey Methodology**

A geophysical survey was performed on the site by Sage Group (Sage) on April 15, 2024, to determine the presence/absence of the utilities near boring locations on the site. Sage utilized an RD7000+ Radio Frequency detector to identify buried live electric lines and a GSSI Utility Scan ground penetrating radar (GPR) with a 350 MHz antenna to identify buried objects on the site and clear the borings before the subsurface investigation.

## **5.3 Soil Sampling & Decontamination Methodology**

On April 30, 2024, five soil borings (NW-SB01 through NW-SB05) were advanced at the site. Soil boring locations were selected to provide area-wide coverage of the site as related to areas potentially impacted by historical activities or operations conducted at or near the site. The general soil boring locations are illustrated in **Figure 2 (Site Map)**.

The soil borings were installed utilizing a direct-push Geoprobe unit. The direct-push probe utilizes hydraulics to advance a sampler into the soil. Soil samples pass through the sampler cutting shoe and are retained within a sealed disposable PVC plastic sampling tube. The PVC sleeve containing the soil sample is then removed while the stainless-steel outer casing remains in place. A new PVC sleeve is placed inside the casing for continued sampling and advancement of the borehole.

A direct-push probe unit can obtain soil samples in intervals of one to five feet, or at any desired sampling depths. In this case, continuous sampling at 4-foot-long sampling intervals/drives was utilized. Each boring was sampled utilizing a Geoprobe DT 22 dual-tube sampler, providing a 1.125-inch diameter soil core by 4-foot-long sample, that was advanced within a 2.25-inch diameter outer casing to collect continuous soil samples to the terminus of each boring.

Field screening of all samples for VOCs was performed in the field using a Mini-Rae 3000 photoionization detector (PID), which was calibrated daily following the Quality Assurance Project Plan (QAPP) to minimize error through instrument drift. Soil samples were field screened in 2-foot intervals per the QAPP, and the soil was visually examined and logged to document the lithology beneath the site.

All soil samples collected for laboratory analysis of VOCs were collected following the QAPP and EPA Sampling Method 5035 using bulk TerraCore Sampling supplies, including the 5-gram T-handle sampling device. Standard protocols were observed for sample collection, sample handling and preservation, and chain-of-custody documentation. Samples were placed in a cooler containing ice and maintained at a temperature of approximately 4° Celsius before analysis.

Strict decontamination procedures were followed by contractors and enforced during the investigation activities by IWM Consulting personnel to reduce the potential for cross-contamination. Drilling and all non-disposable, down-hole sampling equipment were decontaminated before first use on-site, and thereafter between borings, using a vigorous heavy scrubbing wash in Alconox® solution, followed by a water rinse. Equipment blanks were also collected by pouring laboratory-prepared de-ionized water through the field sampling equipment (i.e., the cutting shoe) and collecting the rinsate in the proper sample containers for laboratory analysis.

In accordance with the approved SAP (IWM Consulting, April 2, 2024), two soil samples were selected for laboratory analysis from each boring. One soil sample was generally collected from zero to two feet below ground surface (bgs) and a second soil sample was collected from an interval greater than two feet in depth exhibiting the greatest potential for being impacted (i.e., highest PID reading, staining, odors, etc.) that was located above the observed water table. Each soil sample collected was analyzed for VOCs using SW-846 Method 8260, PAHs using SW-846 Method 8270 SIM, RCRA 8 Metals using SW-846 Methods 6010/7471, and percent moisture.

Additionally, 10 surface soil samples (NW-SS01 through NW-SS10) were collected using a hand auger or shovel at locations across the site from depths of up to one-foot bgs for laboratory analysis.

For quality assurance/quality control (QA/QC) purposes, one field duplicate, one equipment blank, and one matrix spike/matrix spike duplicate (MS/MSD) sample per 20 samples from each matrix type were collected as part of this investigation. One trip blank accompanied each cooler shipment which contained samples for VOC analyses. The soil samples were delivered under chain-of-custody controls to Pace Analytical Services LLC (Pace) located in Indianapolis, Indiana for analysis.

#### **5.4 Groundwater Sampling & Decontamination Methodology**

Upon the completion of the soil sampling, temporary 2-inch diameter PVC screens (10 feet in length) and risers (varying lengths) were installed in the boreholes via direct push methods to facilitate the collection of one-time low-flow groundwater samples. Pre-washed quartz sand was placed around the well screens (extending approximately two feet above the top of the screened interval) and then bentonite was placed within the borehole from the top of the sand to the ground surface.

On May 6, 2024, low-flow sampling activities were initiated. Low-flow sampling does not require the removal of a large volume of water from the sampling point before a representative sample can be obtained. Low-flow purging and sampling techniques reduce the potential for turbulence in the water column during purging and sampling activities and typically provide more accurate results with respect to VOC and metals samples.

A QED Sample Pro® Portable MicroPurge bladder pump (1.75-inch) and a YSI 556 were used to collect low-flow groundwater samples from the five temporary monitoring wells (NW-GP01 through NW-GP05). The pump is equipped with a disposable bladder sleeve which was exchanged between temporary wells. Dedicated, 0.25-inch diameter Teflon™-lined polyethylene tubing was used for sampling each temporary well.

The multi-probe field meter includes probes for temperature, pH, specific conductance, dissolved oxygen (DO), and oxidation-reduction potential (ORP) and was mounted within a flow-through cell block. Purge rates were established to ensure minimal drawdown. Minimal drawdown was defined as being less than

0.33 feet of drawdown during the purge cycle. Water levels were monitored continuously in each monitoring well during purging.

Field parameters were measured continuously and periodically recorded with groundwater samples collected after the field parameters had stabilized or as approved after a maximum of 30 minutes of purge time. Care was taken to ensure the bladder pump discharge tubing and flow-through cell had evacuated several volumes of water before the samples were collected when feasible. Groundwater stabilization criteria that were utilized during the purging activities are listed below:

- |                        |   |
|------------------------|---|
| • Temperature          | $\pm 0.2^{\circ}\text{C}$                       |
| • pH                   | $\pm 0.1$ pH units                              |
| • Specific Conductance | $\pm 3\%$ of reading                            |
| • Dissolved Oxygen     | $\pm 10\%$ of reading or $\pm 0.2 \text{ mg/L}$ |
| • ORP                  | $\pm 10$ millivolts                             |

The groundwater samples were placed into the appropriate laboratory-provided pre-labeled containers. The groundwater samples from the temporary monitoring wells were analyzed for VOCs using SW-846 Method 8260, PAHs using SW-846 Method 8270 SIM, and total and dissolved RCRA 8 Metals SW-846 Method 6010/7470. The groundwater samples were delivered under chain-of-custody controls to Pace located in Indianapolis, Indiana for analysis.

Strict decontamination procedures were also followed during low-flow groundwater sampling activities by IWM Consulting personnel to minimize the potential for cross-contamination. IWM Consulting personnel, while wearing dedicated nitrile gloves, changed out the disposable bladders, gripper plates, stainless steel check balls, and o-rings on the bladder pumps between each sampling location. The flow-through cell block was decontaminated between sampling points using a brush and a Liquinox® and distilled water solution and was then rinsed with distilled water. Additionally, the bladder pump was double washed with brushes and a separate Liquinox® and distilled water solution and was then rinsed with distilled water between each sampling location.

For QA/QC purposes, one field duplicate, one equipment blank, and one MS/MSD sample per 20 samples from each matrix type were obtained as part of this investigation. One trip blank accompanied each cooler shipment which contained samples for VOC analyses.

To determine the site-specific groundwater flow direction, each temporary monitoring well location utilized was located using a GPS unit, and the TOC elevations for the temporary monitoring wells were surveyed to a common benchmark using transit-stadia surveying techniques by IWM Consulting personnel. Depth to groundwater measurements were obtained from the wells before the groundwater sampling event on May 6, 2024, using a water level indicator, which alerts the user with a tone when the probe makes contact with water. The distance between the TOC riser pipe elevation and the water table was read from the incremented probe line. All elevation measurements were recorded to the nearest 0.01 foot. The elevation data along with groundwater gauging data from each monitoring well location was used to calculate groundwater flow direction and gradient for the site.

Upon completion of the site assessment activities, each of the temporary monitoring wells was abandoned. The PVC well materials were removed where possible, or the PVC casing material was unscrewed from the well screen at least several feet bgs, the borings were sealed with bentonite chips, and the ground surface at each location was capped with material similar to its surroundings.

## **5.5    Exterior Soil Vapor Probe Installation & Sampling Methodology**

To facilitate the collection of one-time exterior soil vapor samples from the shallow subsurface, three SGe probes (NW-SGe01 through NW-SGe03) were installed at locations adjacent to various soil borings to provide coverage across the site for potential vapor intrusion assessment.

The SGe borings were advanced utilizing direct-push technology as previously described to obtain continuous soil samples to determine the final installation depth of five feet bgs was in the vadose zone and free of saturated or semi-saturated zones. The soil samples were field screened at the installation depth and detections were recorded. Per the approved scope of the work activities, soil samples were not submitted for laboratory analysis since they were co-located with soil borings. Due to the semi-saturated zone encountered during installation, soil vapor probe NW-SGe03 was constructed at a depth of only four feet bgs.

The temporary SGe sampling points were constructed of 6-inch stainless-steel screen soil vapor probes connected to Teflon™-lined polyethylene tubing to terminal depth. A coarse sand pack was installed in the annular space to six inches above the vapor probe. Benseal® granular bentonite was then placed in the annular space from the top of the sand pack to the ground surface in lifts and hydrated. Boring logs detailing the lithology and construction details of the SGe sampling points are included in **Appendix A**.

Post installation, the soil vapor probes, including tubing and annular backfilled space, were purged of up to three volumes of air using a graduated syringe to develop the soil vapor sampling point when possible. The volume of vapor purged was measured by collecting the purge vapor into a 1-liter Tedlar bag. The subsurface was allowed to equilibrate at least 24 hours before sampling.

One-time soil vapor samples were collected utilizing 10-minute flow regulators (100 ml/min max) from the soil vapor probes in laboratory-provided, batch-certified, 1-liter Summa® sample canisters. A helium shroud was utilized for leak detection since a vacuum was detected on all of the points during initial purging activities post-installation. Immediately before soil vapor sample collection, the sampling apparatus “dead volume” (tubing and implant screen volume) was removed.

IWM Consulting personnel recorded the start and end sampling time along with the initial and final vacuum measurements of each sample canister during the sampling activities. IWM Consulting personnel made sure that none of the sample canisters reached below the recommended minimum final vacuum reading of three inches of mercury at the end of the respective sampling periods.

Upon completion of the SGe sampling activities, each soil vapor probe was abandoned. The tubing was removed and the borings were sealed with bentonite chips and the ground surface at each location was capped with concrete or similar surface material (i.e., soil, gravel).

## **6.0    GEOPHYSICAL SURVEY RESULTS**

A geophysical survey was performed on the site by Sage on April 15, 2024, to determine the presence/absence of the utilities, possible underground storage tanks, and/or product piping near boring locations on the site. No buried metallic objects were discovered, however, utilities were detected/identified (electric lines) near boring locations requiring the final installation locations to be slightly altered compared to the proposed boring locations. A GPR survey report provided by Sage describing their findings is

provided in **Appendix B**.

## 7.0 SOIL BORING INSTALLATION & SAMPLING ACTIVITIES

IWM Consulting personnel supervised Strata Environmental Contractors, LLC (Strata) personnel during the advancement of seven soil borings (NW-SB01 through NW-SB05) on April 30, 2024. The PID readings from the screened soil samples were all recorded at background, 0.0 parts per million by volume (ppmv).

Temporary 2-inch diameter PVC screens (10 feet in length) and risers (varying lengths) were placed in the borings to facilitate the collection of groundwater samples. Groundwater samples were obtained from the borings/temporary groundwater sampling points using low-flow sampling techniques. The borings are displayed by location in **Figure 2 (Site Map)**.

### 7.1 Soil Sampling Activities

IWM Consulting collected 20 soil samples comprised of surface, near-surface, and subsurface soil samples per the methodologies described in Section 5.3 of this report. The soil samples were delivered under chain-of-custody controls to Pace located in Indianapolis, Indiana for analysis using the methods outlined in Sections 5.3 and 3.0 of this report.

For QA/QC purposes, IWM Consulting also submitted two duplicate (FD) samples and two MS/MSD soil samples to account for all parameters analyzed at a rate of one per 20 samples submitted. The following table provides the parent sample information related to the field duplicate and MS/MSD samples:

QA/QC Sample Type/ ID	Parent Sample ID
NW-SL-FD1	NW-SS03 (0.0-1')
MS/MSD	NW-SS09 (0.0-1')

An equipment blank sample (NW-SL-EB1) was also prepared by pouring laboratory-provided deionized water over the hand auger after it had been field-decontaminated. The equipment blank, MS/MSD, and duplicate soil samples were submitted for laboratory analysis of the same parameters. A trip blanks (NW-SL-TB1) accompanied all soil samples obtained for VOC analyses, and the trip blanks were submitted for laboratory analysis of VOCs. The samples were analyzed using Level II QA/QC reporting protocols.

### 7.2 Groundwater Gauging Activities & Groundwater Elevation Data

IWM Consulting personnel conducted groundwater gauging activities of the temporary monitoring well network for potentiometric map generation purposes on May 6, 2024. All groundwater measurements were recorded to the nearest 0.01 foot using a water level indicator.

To provide a better correlation of groundwater flow direction, groundwater elevation data from seven additional temporary wells were utilized from a concurrent investigation being conducted on an adjacent property for determining the groundwater flow direction. The additional temporary wells included were TP-GP01 through TP-GP07 from the Triangle Park Property located at 425 South 5<sup>th</sup> Street which is located to the northwest of the site.

The survey corrected potentiometric groundwater surface elevations recorded during the May 6, 2024 groundwater gauging activities for the two properties and used for contouring purposes ranged from a high of 88.95 feet at NW-GP05 to a low of 85.55 feet at TP-GP01. A groundwater elevation map based on this gauging data is provided in **Figure 3 [Potentiometric Map (5/6/24)]**. As per **Figure 3**, the inferred groundwater flow direction is northwest following the terrain's slope. Depth to groundwater and TOC elevation information for all the data locations utilized is also included in **Table 1 – Summary of Groundwater and Well Measurements**.

### **7.3 Groundwater Sampling Activities**

IWM Consulting collected a total of five groundwater samples from temporary monitoring wells on May 6, 2024, utilizing the low-flow methods described in Section 5.4 of this report. Low flow stabilization criteria were not achieved at all sample locations attempted. Low-flow Field Sampling Forms with field notes regarding the sampling procedures are included in **Appendix D**. The groundwater samples were delivered under chain-of-custody controls to Pace located in Indianapolis, Indiana for analysis of VOCs, PAHs, and total and dissolved RCRA 8 Metals using the analytical methods outlined in Sections 3.0 and 5.4 of this report.

For QA/QC purposes, IWM Consulting also submitted one duplicate (FD) sample and one MS/MSD groundwater sample to account for all parameters analyzed at a rate of one per 20 samples submitted. The following table provides the parent sample information related to the field duplicate and MS/MSD samples:

QA/QC Sample Type/ ID	Parent Sample ID
NW-GW-FD01	NW-GW-GP02
MS/MSD	NW-GW-GP01

One equipment blank (NW-GW-EB01) was also prepared by pouring laboratory-provided deionized water over the low-flow pump after it had been field-decontaminated. The MS/MSD and duplicate groundwater samples were submitted for laboratory analysis of the same parameters. A trip blank (NW-GW-TB01) accompanied all groundwater samples obtained for VOC analyses, and the trip blank was submitted for laboratory analysis of VOCs. The samples were analyzed using Level II QA/QC reporting protocols.

Upon completion of the site assessment activities, each of the temporary wells was abandoned. The PVC well materials were removed where possible, or the PVC casing material was unscrewed from the well screen at least several feet bgs. The borings were sealed with bentonite chips to near ground surface and each location was capped with material similar to its surroundings.

### **7.4 Exterior Soil Vapor Sampling Activities**

SGe samples were collected from three temporary soil vapor probes (NW-SGe01 through NW-SGe03) on May 2, 2024, in accordance with the methodologies described in Section 5.5 in this report. Weather conditions during the sampling event were partly cloudy with temperatures averaging from 80 degrees to 86 degrees Fahrenheit throughout sampling.

The SGe samples were delivered to Pace in Mt. Juliet, Tennessee under chain-of-custody controls for analysis of VOCs by EPA Method TO-15. SGe sampling field information forms are included in **Appendix D**. Due to “tight” geologic conditions encountered at NW-SGe02, an insufficient volume of soil vapor was collected over a 122-minute sampling interval despite using a 10-minute flow regulator. The sample from NW-SGe02 could not be analyzed by the laboratory.

For QA/QC purposes, IWM Consulting also submitted one duplicate SGe sample (NW-SGe-FD1) collected from parent SGe sample location NW-SGe03. The duplicate sample was collected simultaneously with NW-SGe03 with the canisters being connected to the sampling point using a “T fitting”. The duplicate was also analyzed for the same parameters using Level II QA/QC reporting standards.

## 8.0 SOIL INVESTIGATION RESULTS

### 8.1 Lithological Description & Site Hydrogeology

The site is grass-covered with a layer of brown silty clay covering fill material consisting of silty and sandy clays mixed with gravel and cinders extending to depths ranging between 1.5 feet to 6.5 feet bgs. Native soils beneath this consisted of silty clays extending to depths of 7.5 to 10.75 feet bgs where sands, sometimes clayey, extended to the terminal depth of borings at 24 feet bgs. Groundwater was encountered within the sands at depths ranging from 17 to 19 feet bgs.

The soil boring logs/well completion diagrams with complete lithological descriptions are presented in **Appendix A**.

### 8.2 Laboratory Analytical Results Summary – Soil

A total of 20 soil samples (not including QA/QC samples) were collected for laboratory analysis as described in Sections 5.3 and 7.1 of this report. The sample results were compared to the current IDEM R2 Soil Published Levels, updated on March 1, 2024.

A table summarizing the results of the soil samples and the QA/QC duplicate sample obtained from the site is included in **Table 2 (Summary of Subsurface Soil Analytical Results)** and **Table 3 (Summary of Surface Soil Analytical Results)**. The soil analytical results for contaminants in soil are displayed by location in **Figure 4a (Soil Analytical Results-Surface Samples)** and **Figure 4b (Soil Analytical Results-Subsurface Samples)**. The soil analytical reports are included in **Appendix C**.

The analytical results for the duplicate sample collected for QA/QC measures were comparable to the parent sample. No analytes were detected in the equipment blank or trip blank samples.

The analytical results are summarized in the following sub-sections.

#### Surface, Near-Surface, & Subsurface Soil Samples

##### VOCs

- All VOC constituents were reported at concentrations below their most stringent established R2 Published Levels (Short-term Excavation Soil) or the laboratory reporting limits for the surface, near-surface, and subsurface soil samples.

##### PAHs

- All PAH constituents were reported at concentrations below their corresponding RSPLs or the laboratory reporting limits for the surface, near-surface, and subsurface soil samples.

### Metals

- Arsenic was detected at a concentration above its RSPL (10 mg/kg) in surface and near-surface soil samples NW-SL-SS10 0.0-1' (17.3 mg/kg), NW-SL-SB02 0.5-2' (21.3 mg/kg), NW-SL-SB03 0.5-2' (28.9 mg/kg), NW-SL-SB04 0.5-2' (15.6 mg/kg), and NW-SL-SB05 0.5-2' (12.7 mg/kg).
- Lead was detected at a concentration above its RSPL (400 mg/kg) in near-surface soil sample NW-SL-SB03 -0.5-2' (445 mg/kg).
- All other metal constituents were reported at concentrations below their corresponding RSPLs or the laboratory reporting limits for the soil samples.

## 9.0 GROUNDWATER INVESTIGATION RESULTS

Five groundwater samples (not including QA/QC samples) were collected for laboratory analysis as described in Sections 5.4 and 7.3 of this report. The sample results were compared to the current IDEM R2 GWPLs, updated on March 1, 2024.

A table summarizing the results of the groundwater samples and the QA/QC duplicate sample obtained from the site is included in **Table 4 (Summary of Groundwater Analytical Results)**. The groundwater analytical report is included in **Appendix C**.

The groundwater analytical results are displayed by location in **Figure 5 (Groundwater Analytical Map)**.

The analytical results for the duplicate sample NW-GW-FD01 collected for QA/QC measures were comparable to the parent sample NW-GW-GP02. No analytes were detected in the equipment blank or trip blank sample.

### VOCs

All VOC constituents were reported at concentrations below the laboratory reporting limits or their respective GWPLs for the groundwater samples.

### PAHs

All PAH constituents were reported at concentrations below the laboratory reporting limits or their respective GWPLs for the groundwater samples.

### Metals

- Total arsenic was reported at concentrations exceeding the R2 GWPL (10 µg/L) at groundwater all sampling locations, however, dissolved arsenic concentrations were below the R2 GWPL.
- Total lead was reported at concentrations exceeding the R2 GWPL (15 µg/L) at all groundwater sampling locations, however, dissolved lead concentration was below the R2 GWPL.

All other metal constituents were reported at concentrations below their corresponding GWPLs or the laboratory reporting limits for the groundwater samples.

## 10.0 EXTERIOR SOIL VAPOR INVESTIGATION RESULTS

A total of three SGe samples were collected and submitted for laboratory analysis as described in Sections 5.6 and 8.4 of this report, however, sample NW-SGe02 could not be analyzed due to low sample volume. The sample results were compared to the current IDEM R2 Residential Shallow Exterior Soil Gas Published Levels (RSGPLs) and Commercial Shallow Exterior Soil Gas Published Levels (CSGPLs), updated March 1, 2024.

A table summarizing the results of the SGe samples and QA/QC duplicate sample collected from the site are included in **Table 5 (Summary of Exterior Soil Vapor Analytical Results)**. The SGe analytical report is included in **Appendix C**.

A total of 18 separate VOCs were detected in the SGe samples. The SGE analytical results for contaminants are displayed by location in **Figure 6 (Exterior Soil Vapor Analytical Map)**.

### SGe Sample Results

No contaminants were detected in any SGe samples at concentrations exceeding their respective R2 RSGPLs. Of note, tetrachloroethylene (PCE) was detected in samples NW-SGe03 and NW-SGe-FD1, however, PCE was not detected in any soil or groundwater samples collected from the site.

## 11.0 WELLHEAD PROTECTION

Based on the IDEM Wellhead Proximity Determinator website (<https://idemmaps.idem.in.gov/whp2/>), the site is not located within a Wellhead Protection Area or Source Water Area.

## 12.0 QAPP FIELD AUDIT & DATA ASSESSMENT REPORT

In accordance with the QAPP, an IWM Project Manager conducted a field audit concurrently with the groundwater sampling activities on May 6, 2024. An IWM Consulting QA manager also prepared Data Assessment Reports (DARs) in accordance with the QAPP, which discusses the overall precision, accuracy, usability, and completeness of the data collected during the ESA activities. The data collected during the ESA activities was deemed acceptable and usable with limitations, as outlined in the DAR. A copy of the Field Audit Report and DARs are included in **Appendix E**.

## 13.0 SUMMARY AND RECOMMENDATIONS

### Soil Summary

All VOC and PAH constituents were reported at concentrations below either their most stringent established R2 Published Levels or the laboratory reporting limits in all surface, near-surface, and subsurface soil samples collected.

Arsenic was detected at a concentration above the RSPL of 10 mg/kg, but below the CSPL of 30 mg/kg and Rec SPL (Park) of 40 mg/kg, in four near surface soil samples and one surface soil sample. All other reported

arsenic concentrations were below the RSPL.

Lead was detected at a concentration above the RSPL of 400 mg/kg, but below the CSPL and Rec SPL (Park) of 800 mg/kg, in one near-surface soil sample collected [NW-SL-SB03 (3-4.5')]. All other reported lead concentrations were below the RSPL.

#### *Groundwater Summary*

All VOCs and PAHs were reported at concentrations below the laboratory reporting limits.

Total lead and arsenic were reported above their respective R2 GWPLs, however, dissolved lead and arsenic concentrations were below their respective R2 GWPLs. This is most likely the result of turbidity in the samples and the temporary nature of the monitoring wells in being that they were undeveloped.

#### *Exterior Soil Vapor Summary*

Only two SGe samples were subject to laboratory analysis. A total of 18 separate VOCs were detected in the SGe samples, however, no contaminants were detected in any SGe samples at concentrations exceeding their respective R2 RSGPLs. Of note, PCE was detected in samples NW-SGe03 and NW-SGe-FD1, however, PCE was not detected in any soil or groundwater samples collected from the site.

#### *Conclusions*

No VOC or PAH constituents were detected in the near surface or subsurface soils or groundwater above a published level at the site.

Arsenic and lead were detected in multiple soil samples both near surface and surface above their residential published levels but below commercial or recreational published levels. The residential published level is a conservative estimate that is known to be safe where children are present and exposure is continual. It is not expected that future use of the site will involve continual soil exposure. Its current use is as a “greenspace” adjacent to a community park. Should future use involve multi-family residential use, the CSPLs would apply.

The SGe results indicate no potential for vapor intrusion into future structures at the site of both petroleum constituents and chlorinated solvents above a residential published level for indoor air. Although only two SGe samples were able to be analyzed and a data gap exists in the center of the site, IDEM will typically expect vapor intrusion investigations at occupied structures if those structures are within 100 feet of a potential soil source of vapors, or underlain by or in contact with groundwater exceeding IDEM’s published groundwater levels for VOCs. No groundwater plume is evident at the site and VOCs were not detected in the soils at the site.

Based on the results of the soil, groundwater, and soil gas samples collected, redevelopment of this property for commercial or recreational purposes appears to be unencumbered.

IWM Consulting appreciates the opportunity to provide the IBP with this Phase II ESA Report. If you have any questions or comments regarding this submittal, please contact Chris Parks at 317-347-1111 or by email at [cparks@iwmconsult.com](mailto:cparks@iwmconsult.com).

Sincerely,

**IWM Consulting Group, LLC**

**Notes:**

All samples collected by IWM Consulting personnel and analyzed at Pace Analytical Services, LLC located in Indianapolis, Indiana.

Unlisted compounds do not exceed laboratory reporting limits for all samples.

All results in mg/kg (dry weight basis).

Underlined concentrations exceed Risk-Based Closure Guide (R2) Residential Soil Published Levels.

**Bolded concentrations exceed R2 Recreational Soil Published Levels (Community Park).**

**Bolded & shaded concentrations exceed R2 Commercial Soil Published Levels.**

Depth increments are feet Below Ground Surface (BGS).

NE = Not Established.

ppmv = parts per million by volume.

VOCs analyzed using SW-846 Method 8260.

PAHs analyzed using SW-846 Method 8270 SIM.

RCRA 8 Metals analyzed using SW-846 Method 6010/7471.

Company: IWM Consulting

Job Reference: IN23055

WO Number: WO-14-0008

Dear Chris,

SAGE is pleased to provide you with the following pictures and descriptions for the site locations at 425 S. 5<sup>th</sup> Street, Lafayette, Indiana performed 4.15.2024.

## SITE NOTES

**General Site Information:** SAGE technician Vincent Evans arrived on site to clear fifteen boring locations. Gas, sewer, and electric had been marked by public. We recommend that all utilities are located and cleared before drilling.

## EQUIPMENT

The RD7000+ RM/RF wand and XT-5 inducer are used to locate unknown buried power lines and locating known lines that can be charged. Using the RM/RF wand as a redundancy allows for the best possible result when scanning for utilities but does not guarantee that there will not be any in the ground given the known constraints of the equipment.

GSSI UtilityScan- 350 MHz GPR Antenna mounted in a stroller frame which rolls over the surface. This antenna transmits a sequence of pulses and displays the images on a tablet, which records and saves each reading. The 350 MHz antenna allows for GPR penetration from depths of 0-8' in conductive soil types. The depth achieved ranges widely depending on the types of materials being scanned. Soils such as Wet Clay may limit the readable scan depth to 3'. The size of the target that will register with the GPR system must be larger as the scan depth becomes deeper. A general rule is for every 1' of depth the size of the target must increase in size by 1" (e.g. in 3' of depth the target must be close to 3" in diameter to register on the system, but this is also subject to soil conditions). The surface must be reasonably smooth and free of obstructions in order to produce usable scans. Any obstructions such as landscaping, debris, curbing, etc. will also limit the feasibility of the GPR unit to perform a scan of the requested area.

The Utility Scan unit is also equipped with LineTrac which adds the ability to detect AC power and induced RF energy present in buried utilities. This accessory is compatible with the 350 HS antenna and designed to work with existing RD transmitters on a 20Hz to 50kHz bandwidth. LineTrac will only pick up those lines which are electrically charged with enough power to register and will not be able to locate low or unpowered lines.

9511 Angola Court, Suite 223 | Indianapolis, IN 46268

## GENERAL TERMS AND CONDITIONS

1. SAGE provides utility location services in accordance with ASCE Standard 38-02, Quality Level "B" that includes Ground Penetrating Radar (GPR) Services. GPR is a good tool for utility locating; however, it is not without its limitations. In general, our maximum depth penetration with a 350 MHz antenna is 3-8' deep, however, this depth is completely dependent on the composition of soils in the area being surveyed. Customer fully understands that for every foot in depth penetration with the GPR equipment, the pipe/utility must be at least 1" in diameter to be located. For example, at 3 feet in depth, the pipe/utility must be 3" or larger to be detected. Some types of pipes are very difficult to locate, such as clay or concrete pipes, and empty pvc type pipes. Given these factors, SAGE CANNOT guarantee it will be able to locate ALL UTILITIES or BURIED OBJECTS on site.
2. Our goal is to provide you with the answers to your questions regarding what lies below the surface, and where it is located. Customer acknowledges it understands that our answers are based upon an interpretation of retrieved data and are what SAGE believes lies below the surface. The decision to proceed with cutting, coring, drilling, boring, or excavation is left entirely up to the customer.
3. SAGE does not accept liability for an inaccurate interpretation or any other reason, and Customer agrees to release and indemnify SAGE and its owners and agents from all losses and damages from all alleged negligence and/or contract claims by Customer or any third party.
4. Payment is due upon receipt of invoice. Interest charges of 1.5% per month will be incurred on any outstanding balance beyond 30 days after invoice date.

Respectfully submitted,

Derek Spaulding  
Service Director

### **LABORATORY ANALYTICAL REPORTS – SOIL, GROUNDWATER, & SOIL VAPOR**

Pace Analytical Services, LLC  
7726 Moller Road  
Indianapolis, IN 46268  
(317)228-3100

May 15, 2024

Mr. Brad Gentry  
IWM Consulting Group, LLC  
7428 Rockville Road  
Indianapolis, IN 46214

RE: Project: Norfolk & Western Railroad Pro  
Pace Project No.: 50372019

Dear Mr. Gentry:

Enclosed are the analytical results for sample(s) received by the laboratory on May 01, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Indianapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Heather Patterson

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro  
Pace Project No.: 50372019

Sample: NW-SL-SB01 0.5-2' Lab ID: 50372019001 Collected: 04/30/24 10:00 Received: 05/01/24 17:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro  
Pace Project No.: 50372019

Sample: NW-SL-SB02 0.5-2' Lab ID: 50372019003 Collected: 04/30/24 11:00 Received: 05/01/24 17:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro  
Pace Project No.: 50372019

Sample: NW-SL-SB02 8-10' Lab ID: 50372019004 Collected: 04/30/24 11:10 Received: 05/01/24 17:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro  
Pace Project No.: 50372019

Sample: NW-SL-SB04 0.5-2' Lab ID: 50372019007 Collected: 04/30/24 14:00 Received: 05/01/24 17:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro

Pace Project No.: 50372019

Sample: NW-SL-SB04 5-6.5' Lab ID: 50372019008 Collected: 04/30/24 14:10 Received: 05/01/24 17:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro

Pace Project No.: 50372019

Sample: NW-SL-SS01 0.0-1' Lab ID: 50372019011 Collected: 05/01/24 15:30 Received: 05/01/24 17:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro  
Pace Project No.: 50372019

Sample: NW-SL-SS02 0.0-1' Lab ID: 50372019012 Collected: 05/01/24 15:20 Received: 05/01/24 17:50 Matrix: Solid

**Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.**

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro

Pace Project No.: 50372019

Sample: NW-SL-SS05 0.0-1' Lab ID: 50372019015 Collected: 05/01/24 14:45 Received: 05/01/24 17:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

## REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,  
without the written consent of Pace Analytical Services, LLC.

## ANALYTICAL RESULTS

Project: Norfolk & Western Railroad Pro  
Pace Project No.: 50372019

Sample: NW-SL-SS09 0.0-1' Lab ID: 50372019019 Collected: 05/01/24 13:50 Received: 05/01/24 17:50 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

## QUALIFIERS

Project: Norfolk & Western Railroad Pro

Pace Project No.: 50372019

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

- 1d Neither matrix spike nor matrix precision data could be provided for this analytical batch due to insufficient sample volume.
- ED Due to the extract's physical characteristics, the analysis was performed at dilution.
- L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- N2 The lab does not hold NELAC/TNI accreditation for this parameter but other accreditations/certifications may apply. A complete list of accreditations/certifications is available upon request.
- R1 RPD value was outside control limits.
- S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated sample.

RE: Project: Norfolk & Western Railroad IFA  
Pace Project No.: 50372470

Dear Mr. Gentry:

Enclosed are the analytical results for sample(s) received by the laboratory on May 08, 2024. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Indianapolis

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Heather Patterson

## QUALIFIERS

Project: Norfolk & Western Railroad IFA

Pace Project No.: 50372470

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

L1      Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

R1      RPD value was outside control limits.

# CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

# GLOSSARY OF TERMS

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

### Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
The remainder of this page intentionally left blank, there are no qualifiers applied to this SDG.

## **APPENDIX D**

### **FIELD SAMPLING FORMS – LOW-FLOW GROUNDWATER & SOIL VAPOR**

## **Groundwater Sampling Field Information Form**

Site Name: Norfolk + western RR Rte Personnel: DEW  
Sample ID: NW GW GP 01 Sample Date: 5/6/24

## Well Data

Depth to Water (feet below TOC): 19.87  
Screen Interval (feet below TOC): 16.71 - 26.71  
Total Well Depth (feet below TOC): 26.71  
Well Volume (gallons): 1,111

Initial DTW: 19.87  
Volume Purged (gallons): 1.16  
Purge Start Time: 9:30  
Purge End Time: 10:30

## Sampling Data

Analysis Type: VOCs, PAHs, RCRA B METALS

Sample/Purge Device: QED Micropurge Pump

Pump Intake Elevation (feet below TOC): 25.3

Sample Tube Type: Teflon-lined polyethylene

Intake of pump should be the midpoint of the saturated screen/water column.

### Field Parameters

Sample Time: 10:30

Notes: ms/msD From this sample point

**Sample Appearance:**

Weather Conditions: OVERCAST 59° CALM

## **Groundwater Sampling Field Information Form**

Site Name: Norfolk Western Rail Personnel: DEW  
Sample ID: NW GW-GP02 Sample Date: 5/6/24

## Well Data

Depth to Water (feet below TOC):	19.04	Initial DTW:	19.84
Screen Interval (feet below TOC):	15.09 - 25.09	Volume Purged (gallons):	1.19
Total Well Depth (feet below TOC):	25.09	Purge Start Time:	11:11
Well Volume (gallons):	0.98	Purge End Time:	11:52

## Sampling Data

Analysis Type: VOCs, PAHs, RCRA B Metals Sample Tube Type: Teflon-lined polyethylene  
Sample/Purge Device: QED Micropurge Pump Filtered? Yes  No Type:  
Pump Intake Elevation (feet below TOC): 22.86 Intake of pump should be the midpoint of the saturated screen/water

## Field Parameters

Sample Time: 11:52

Notes: Field Day From this Sample Point

Sample Appearance: TAN/turbid

Weather Conditions: overcast 64° CALM

## **Groundwater Sampling Field Information Form**

Site Name: Norfolk Western RAIL    Personnel: DEW  
Sample ID: NW-GW-GP03    Sample Date: 5/6/24

## Well Data

Depth to Water (feet below TOC):	10.77	Initial DTW:	18.77
Screen Interval (feet below TOC):	16.42 - 26.42	Volume Purged (gallons):	116
Total Well Depth (feet below TOC):	26.42	Purge Start Time:	12:21
Well Volume (gallons):	1,24	Purge End Time:	13:01

## Sampling Data

Analysis Type: VOCs, PAHs, RCRA 8 Metals      Sample Tube Type: Teflon-lined polyethylene  
Sample/Purge Device: QED Micropurge Pump      Filtered? Yes      No      Type:  
Pump Intake Elevation (feet below TOC): 22.59      Intake of pump should be the midpoint of the saturated screen/water

### Field Parameters

Sample Time: 13:01

## Notes:

Sample Appearance: Tan - tuckled

Weather Conditions: overcast 66° calm

## **Groundwater Sampling Field Information Form**

Site Name: Norfolk Western Rail Personnel: DQW  
Sample ID: NW-GW-GP-04 Sample Date: 5/6/24

## Well Data

Depth to Water (feet below TOC):	19.26	Initial DTW:	19.26
Screen Interval (feet below TOC):	15.10 - 25.10	Volume Purged (gallons):	1,10
Total Well Depth (feet below TOC):	28.10	Purge Start Time:	13:32
Well Volume (gallons):	95	Purge End Time:	14:10

## Sampling Data

Analysis Type: VOCs, PATHs, RCRA 8 Metals      Sample Tube Type: Teflon-lined polyethylene  
Sample/Purge Device: QED Micropurge Pump      Filtered? Yes      Type: No  
Pump Intake Elevation (feet below TOC): 22.18      Intake of pump should be the midpoint of the saturated screen/water

### Field Parameters

Sample Time: 14:10

### Notes:

Sample Appearance: Tan = turbid

Weather Conditions: Partly Cloudy, 72° CAA LM

## **Groundwater Sampling Field Information Form**

Site Name: Norfolk Western RR Personnel: QEW  
Sample ID: NW-GW-6P-05 Sample Date: 5/6/24

## Well Data

Depth to Water (feet below TOC):	17.95	Initial DTW:	17.95
Screen Interval (feet below TOC):	14.46 - 24.66	Volume Purged (gallons):	1,16
Total Well Depth (feet below TOC):	26.66	Purge Start Time:	14:30
Well Volume (gallons):	1,09	Purge End Time:	15:10

## Sampling Data

Analysis Type: VOCs, PAHs, RCRA B METALS Sample Tube Type: Teflon-lined polyethylene  
Sample/Purge Device: QED Micropurge Pump Filtered? Yes Type: No  
Pump Intake Elevation (feet below TOC): 21.30 Intake of pump should be the midpoint of the saturated screen/water

## Field Parameters

Sample Time: 15:10

### Notes:

Sample Appearance: Tan - Turbid

Weather Conditions: Partly Cloudy 75° Calm

## YSI 556 Calibration Form

Date: 5/6/24

Personnel: DEW

Project: Transite Pipe, Norfolk & Western

Parameter	Calibration Standard Value	Instrument Reading Before Calibration	Instrument Reading After Calibration	Calibration Accepted	Instrument Reading Post-Calibration
ORP	240mV	235.9	240	Y / N	
pH	7.00 s.u. (+/-50 pH mV)	6.97	7.0	Y / N

**APPENDIX E**

**FIELD AUDIT REPORT  
AND DATA ASSESSMENT REPORTS**

Notes:  
 1 NA denotes not applicable and/or not observed during this audit.  
 2 Reviewed in part via project documentation following field audit.  
 3 Cooler custody seal not warranted. Coolers delivered by IWM personnel to lab.

	Yes	No	Notes
<b>Audit of General Field Methodology</b>			
1, 2, 3			
Were IWM Consulting personnel on-site during sampling activities?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Do the sampling methods follow those identified in the QAPP/SAP?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
If sampling procedures were modified, were the changes properly documented?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Did equipment decontamination procedures follow those identified in the SAP?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Did sample handling procedures follow those identified in the QAPP/SAP?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were appropriate controls followed those identified in the QAPP/SAP?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were quality control samples utilized?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were field Q/A/QC samples consistent with the SAP?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was proper field documentation utilized? (Field books, field forms, COC, etc.)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	2
As applicable, field instruments will be calibrated daily prior to use and the calibration will be verified by a calibration standard.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Field equipment utilized:	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
(1) Soilmet 101 WLI (2) YSI 556 Multi-Meter	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was the field equipment calibrated prior to use?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	2
Was the equipment calibration documented?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
a PID to organic vapors and/or ambient air, or YSI field check)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was project field documentation adequate? (i.e., use of field books, field forms, documentation of sample locations, sampling times, types of samples collected, etc.)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	2
Was custody protocol observed? (i.e., use of similar location, COC forms utilized, a person's possession, secured vehicle or similar location, COC forms utilized, etc.)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	2
Were sample handling protocols observed? (i.e., use of nitrite gloves, proper sampling containers, proper sample labeling, prompt sealing of sampling containers, ice in cooler(s), safe sample packaging for transportation, etc.)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were unique sample identifications utilized?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was waterproof ink used on sample labels?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were custody seals utilized on sample coolers?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	3

IWM/Contractor Personnel Present On-Site: IWM: Duane White, Brad Gentry

Date & Time Audit Was Performed: May 6, 2024: 14:15 - 15:15

Groundwater Sampling Audit

IN

Location/Project Audit Was Performed For: Norfolk & Western RR, S. 5th St & 5th St NE, Lafayette,

## QAPP Field Audit Form

### Attachment A

Notes:

- 2 Reviewed in part via project documentation following field audit.  
 1 NA denotes not applicable and/or not observed during this audit.

Audit of Groundwater Sampling Methodology and Quality Assurance	Yes	No	Notes
Was the site adequately restored after sampling activities?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	2
Were the borings properly sealed with bentonite?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	2
Was adequate ice present in the cooler?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were proper sampling and sample handling protocols observed?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was proper CQC documentation utilized?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	2
Were the containers properly labeled?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were the containers properly preserved?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were sample containers appropriate/laboratory supplied?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was purge water properly managed on-site?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Were drawdown, temperature, pH, SP, and/or ORP measurements recorded?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was bladder pump properly decontaminated between sampling locations?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was disposable bladder utilized for each sampling location?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was dedicated tubing utilized for each sampling location?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was the calibration procedure documented?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was the field equipment properly calibrated prior to use?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was a bladder pump utilized?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
Was low-flow GW sampling performed?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	

Audit of Soil Sampling Methodology and Quality Assurance	Yes	No	Notes
Was the site adequately restored after sampling activities?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were the borings properly sealed with bentonite?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Was adequate ice present in the cooler?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were proper sampling and sample handling protocols observed?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Was proper CQC documentation utilized?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were the containers properly labeled?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were the containers properly preserved?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were sample containers appropriate/laboratory supplied?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were new disposable nitrite gloves utilized for each sample?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were soil samples for VOC analysis obtained in general accordance with sampling method 5035?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were soil samples for VOC analysis obtained in general accordance with sampling			
Were the soil borings properly logged/documented?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were the soil samples logged in accordance with the USCS system?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Was the calibration documented?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Was the PID and/or XRF calibrated prior to use?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Were the samples field screened with a PID and/or XRF?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Was a new PVC sampling sleeve utilized for each sample?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Was soil sampling equipment screened for each sample?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Was direct-push sampling equipment utilized?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1
Was soil sampling equipment properly decontaminated between sampling locations?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	1

Notes:

- <sup>1</sup> NA denotes not applicable and/or not observed during this audit.
- <sup>2</sup> Reviewed in part via project documentation following field audit.

Audit of Health & Safety Procedures			
	Yes	No	Notes
Were standard H&S protocols observed?	<input type="checkbox"/>		
Were site utilities properly cleared?	<input type="checkbox"/>		
Was the HASP signed by site personnel?	<input type="checkbox"/>		
Was the HASP adequate for the proposed work scope?	<input type="checkbox"/>		
Was a site-specific HASP available?	<input type="checkbox"/>		
Was a site-specific HASP prepared?	<input type="checkbox"/>		

Audit of QA/QC Sampling Methodology and Quality Assurance			
	Yes	No	Notes
Were duplicate tip blanks utilized? (one per cooler containing VOC samples)	<input type="checkbox"/>	2	
Did the trip blank consist of reagent-grade water or was the blank lab prepared?	<input type="checkbox"/>		Lab prepared
Were sufficient tip blanks obtained? (If only disposable or single use sampling blank or field blank collected?)	<input type="checkbox"/>		
Were MS/MSD soil samples obtained?	<input type="checkbox"/>	1	
Were MS/MSD groundwater samples obtained?	<input type="checkbox"/>	2	
Was a trip blank(s) utilized?	<input type="checkbox"/>		
Were field duplicate asbestos samples obtained?	<input type="checkbox"/>	1	
Were the number and matrices for the field duplicates sufficient?	<input type="checkbox"/>	2	
Were MS/MSD soil samples obtained?	<input type="checkbox"/>		
Were field duplicate groundwater samples obtained?	<input type="checkbox"/>	2	
Were field duplicate soil samples obtained?	<input type="checkbox"/>	1	
Were field duplicate asbestos samples obtained?	<input type="checkbox"/>		
Were the number and matrices for the field duplicates sufficient?	<input type="checkbox"/>	2	
Were MS/MSD groundwater samples obtained?	<input type="checkbox"/>	1	
Were sufficient tip blanks utilized? (one per cooler containing VOC samples)	<input type="checkbox"/>	2	
Described equipment blank preparation: The soil and groundwater sampling equipment blanks were prepared in the field after the sampling equipment was field decontaminated.			
Were equipment blanks utilized at a ratio of 1:20 per matrix or one per sampling event?	<input type="checkbox"/>	2	

## **Audit Summary**

Were any deficiencies/deviations from the planned sampling program observed during the field audit?

No

If deficiencies/deviations were observed during the audit, were corrective action procedures required or implemented, and was the project manager notified?

NA

Data collection activities that occurred during sampling event that may affect the integrity of the samples are as follows:

NA

**Data Limitations and Actions.** Sources of sampling and analytical error will be identified and corrected as early as possible to the onset of sample collection activities. An ongoing data assessment process will be incorporated during the project, rather than just as a final step, to facilitate the early detection and correction of problems, ensuring that project quality objectives are met.

Data that do not meet the measurement performance criteria specified in this QAPP will be identified and the impact on the project quality objectives will be assessed and discussed within the Phase II. Specific actions for data that do not meet the measurement performance criteria depend on the use of the data and may require that additional samples are collected or the use of the data to be restricted.

Based upon the findings of the audit, the data derived from the sampling event should be determined to be; (1) usable without limitations, (2) usable with limitations, or (3) of limited usability for the purpose intended.

**Statement of data validation/usability.** Based upon the field audit QA/QC activities performed to ensure that the collected data are scientifically defensible, properly documented, and of known quality, and meet project objectives, it is my professional opinion that the data is:

- 1) Usable without limitations.

Sincerely,

**IWM Consulting Group, LLC**

Bradley E. Gentry, LPG #2165

Vice President

## EXECUTIVE SUMMARY

IWM Consulting Group, LLC (IWM Consulting) prepared a Quality Assurance Project Plan (QAPP) for the Community-Wide Assessment Grant (CWAG) Initiative of the Lafayette Target Area which was submitted to the United States Environmental Protection Agency (EPA) on August 11, 2023, and approved by the EPA and Indiana Brownfields Program (IBP) on August 23, 2023. Mr. Christopher Schoo, an IWM Consulting Quality Assurance Manager, completed this Data Assessment Report (DAR) for soil and water samples submitted for volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs), and Resource Conservation and Recovery Act (RCRA) 8 metals from the Norfolk & Western Railroad property located at South 5<sup>th</sup> Street and 5<sup>th</sup> Street Northeast in Lafayette, Tippecanoe County, Indiana. The samples were collected between April 30 and May 6, 2024. The samples were analyzed by Pace Analytical Services, LLC (Pace) of Indianapolis, Indiana. The following two laboratory reports were generated: Pace Project Numbers 50372019 and 50372470.

Pace Report No. 50372019 contained the analytical results for 20 soil samples, one soil duplicate sample, one soil matrix spike/matrix spike duplicate (MS/MSD) sample, one soil equipment blank sample, and one trip blank sample. Pace Report No. 50372470 contained the analytical results for five groundwater samples, one duplicate groundwater sample, one groundwater equipment blank sample, one groundwater MS/MSD sample, and one trip blank sample.

In general, the chain of custody (COC) documentation was accurately completed and included appropriate sample receiving information. The COC contained some minor deviations from protocol, which did not affect the usability of the data (see Section 2.0).

In general, the method detection limits (MDLs) and reporting limits (RLs) were acceptable and quantitation limits were found to be acceptable for the data's intended use [comparison to the Indiana Department of Environmental Management's (IDEM's) *Risk-Based Closure Guide* (R2) Published Levels (PLs)].

Method blanks were prepared and analyzed as required by the referenced methods. No target compounds were detected above their respective MDLs.

Trip blanks were utilized in coolers containing samples for VOC analyses. All trip blanks were reported as non-detect.

Soil sampling equipment blanks (NW-SL-EB1) and a groundwater sampling equipment blank (NW-GW-EB01) were prepared in the field after the sampling equipment was field decontaminated. The equipment sample blanks were reported as non-detect.

Surrogates, internal standards, MS/MSD samples, and LCSs were prepared and analyzed as required by the referenced method(s). Multiple analytes were found to be outside of control limits in several MS/MSD and LCS samples. The RPD of several analytes was also to be outside of control limits. The data was properly qualified/annotated and referenced in the laboratory Quality Control Data summary and no additional data qualification is required. Additionally, sufficient QA/QC information exists to support the conclusion that the control limit exceedances do not impact the usability of the data for its intended use.

The RPDs for the field duplicate soil analytes were found to be in compliance with the QAPP objectives in comparing NW-SL-SS03 (0.0-1') and TP-SL-FD, as well as the laboratory duplicates. The RPDs of the groundwater field duplicate analytes detected at concentrations equal to or greater than five times their quantitation limit were found to be in compliance with the QAPP objectives in comparing NW-GW-GP02 and NW-GW-FD01.

Based on this DAR, the results for the analyses of the samples reported in the Norfol & Western Railroad property data set (Pace Report Nos. 50372019 and 50372470) were determined to be acceptable for their intended use within the limitations described above.

## **1.0 INTRODUCTION**

Soil samples obtained for volatile organic compound (VOC) analyses were collected utilizing United States Environmental Protection Agency (EPA) Method 5035A. Soil and groundwater samples were analyzed for VOCs using EPA analytical Method 8260, polycyclic aromatic compounds (PAHs) using EPA analytical Method 8270 SIM, and Resource Conservation Recovery Act (RCRA) 8 metals using EPA analytical Method 6010 (with mercury as the exception using EPA analytical Methods 7471 or 7470). Soil samples were also analyzed for percent moisture utilizing analytical Method SM 2540G for moisture correction, as necessary.

To the extent applicable, this data assessment was performed following the Quality Assurance Project Plan (QAPP) dated August 11, 2023. The data assessment process is intended to evaluate data on a technical basis in addition to a method compliance basis, rather than on a contract compliance basis. The data package as received from the laboratory must contain sufficient raw data documentation to facilitate the assessment process and allow verification of all reported sample results. The review is based on the data provided by the laboratory and assumes that it is accurate, true, and complete. In addition, professional judgment was applied as necessary and appropriate.

Unless a specific laboratory report is indicated, comments in this Data Assessment Report (DAR) apply to each of the two Pace Analytical Services, LLC (Pace) laboratory reports (Nos. 50372019 and 50372470).

## **2.0 PRESERVATION, SAMPLE INTEGRITY, AND QA/QC SAMPLES**

The samples were received in good condition. The following observations were noted:

- Chain-of-Custody (COC) documentation was utilized.
- In general, the COC documentation was accurately completed and followed proper protocol with no exceptions.
- The cooler temperatures were measured and were within acceptance limits.
- Ice was present in all coolers upon receipt.
- Custody seals were not utilized on the coolers; however, the aforementioned coolers were delivered directly to the laboratory by IWM Consulting personnel or picked up from IWM Consulting by Pace personnel.
- The samples in all coolers arrived intact and no loss or breakage was noted.
- The QAPP field completeness goal of 90% for samples collected/analyzed was achieved.
- The samples contained in all the coolers were delivered within the respective sample holding time(s).
- The samples contained in all coolers contained sufficient sample volume.
- The samples contained in all coolers utilized the correct containers and preservation.
- No headspace was noted in the 40-mL vials for water samples upon receipt.
- The sample labels in the coolers matched the COC, except for those noted above.
- The cooler(s) containing samples utilized in Pace Report No. 50372019 contained:
  - 20 soil samples, one duplicate soil sample, one soil MS/MSD sample, one soil equipment blank sample, and one trip blank sample.
- The cooler(s) containing samples utilized in Pace Report No. 50372487 contained:

- Five groundwater samples, one duplicate groundwater sample, one groundwater equipment blank sample, one groundwater MS/MSD sample, and one trip blank sample.
- The QAPP field duplication rate (1:20) was observed.
- The QAPP equipment blank rate (1:20) was observed.
- The QAPP MS/MSD rate (1:20) was observed.
- Trip blanks were utilized in coolers containing samples for VOC analyses.
- The sample designations were found to be appropriate and in compliance with the QAPP.

### **3.0 HOLDING TIMES, ANALYTICAL METHODS, METHOD DETECTION LIMITS (MDLS), REPORTING LIMITS (RLS), UNITS, AND DATA QUALIFICATIONS UTILIZED**

The laboratory analytical reports were acceptable for the intended use of the data. The following observations were noted:

- The samples were analyzed within the established holding times without exception
- The analytical methods utilized were appropriate.
- The analytical methods utilized were properly noted/cited.
- In general, the method detection limits (MDLs) and reporting limits (RLs) were acceptable and quantitation limits were found to be acceptable for the data's intended use [comparison to the Indiana Department of Environmental Management's (IDEM's) *Risk-Based Closure Guide* (R2) Published Levels (PLs)].
- The dilution factors (DL) were properly noted.
- The units of measure were appropriate.
- Data qualifiers for individual samples and/or parameters were utilized as appropriate.

### **4.0 BLANKS**

Method blanks were prepared and analyzed as required by the referenced method. No target compounds were detected above their respective MDLs.

Trip blanks were utilized in coolers containing samples for VOC analyses. All trip blanks were reported as non-detect.

A soil sampling equipment blank (NW-SL-EB1) and a groundwater sampling equipment blank (NW-GW-EB01) were prepared in the field after the sampling equipment was field decontaminated. All target analytes were non-detect in the blanks.

### **5.0 SURROGATE RECOVERY/INTERNAL STANDARDS**

Surrogate standards and internal standards were added to the VOC and PAH laboratory quality control (QC), and soil and groundwater samples as required by the referenced methods. None of the VOC and PAH laboratory QC sample surrogate recoveries exceeded their respective laboratory control limits unless outlined below:

Pace Report No. 50370219

- In soil sample NW-SL-SB02 (0.5-2') the percent recovery for VOC surrogates dibromofluoromethane and toluene-d8 exceeded their upper recovery limits. All VOCs were below reporting limits in the sample.
- In soil sample NW-SL-SB03 (0.5-2') the percent recovery for VOC surrogate toluene-d8 exceeded its upper recovery limit. All VOCs were below reporting limits in the sample.
- In method blank sample 3604209 the PAH surrogates 2-fluorobiphenyl and p-terphenyl-d14 exceeded their upper recovery limits. All PAHs were below reporting limits in the sample.

All other surrogate/internal standard recoveries were within acceptance limits and all data was properly qualified/annotated and referenced.

## **6.0 SPIKED ANALYSES**

### **6.1 Matrix Spike/Matrix Spike Duplicate (MS/MSD)**

Matrix spike samples were prepared and analyzed as required by the referenced method.

The data was properly qualified/annotated and referenced as noted below.

Pace Report No. 50372019:

- For MS/MSD laboratory sample numbers 3606085/3606086, the MS and MSD percent recoveries for barium and lead were found to be below their respective control limits due to matrix interference.
- For MS/MSD laboratory sample numbers 3606089/3606090, the MS and MSD percent recoveries for barium were found to be below their respective control limits due to matrix interference.
- For MS/MSD laboratory sample numbers 3606091/3606092, the MSD percent recovery for barium and the MS percent recovery for lead were found to be below their respective control limits due. The RPDs of the MS/MSD results for these analytes were within their respective control limits.
- For MS/MSD laboratory sample numbers 3605158/3605159, the MS and MSD percent recoveries for vinyl acetate were found to be above their respective control limits. The resulting RPD was within control limits.
- Although the QAPP MS/MSD rate of 1:20 samples collected was observed for the project, an MS/MSD laboratory sample is not associated with VOC Method Blank sample number 3607168 due to insufficient volume. This QA/QC batch is associated with eight of the submitted soil samples.
- For MS/MSD laboratory sample numbers 3607170/3607171, the MS and MSD percent recoveries for acrolein and ethyl methacrylate were found to be below their respective control limits. The batch was accepted based on the LCS recovery.
- Although the QAPP MS/MSD rate of 1:20 samples collected was observed for the project, an MS/MSD laboratory sample is not associated with PAH Method Blank sample number 3604209 due to insufficient volume. This QA/QC batch is associated with an equipment blank sample.
- For MS/MSD laboratory sample numbers 3608235/3608236, the MS percent recovery for benzo(b)fluoranthene was found to be above its upper control limit. The batch was accepted based on the LCS recovery. The resulting RPD was within control limits.

Pace Report No. 50372470:

- For MS/MSD laboratory sample numbers 3609515/3609516, the RPD of the MS/MSD results for iodomethane were found to be above their control limits (20%).

Based on the information presented in the laboratory Quality Control Data summary, the soil and groundwater MS/MSD results were properly annotated and no additional data qualification is required. Additionally, sufficient QA/QC information exists to support the conclusion that the soil and groundwater MS/MSD results that were outside of control limits do not impact the usability of the data for its intended use.

**6.1.1 Laboratory Control Sample (LCS)**

An LCS was prepared and analyzed with each analytical batch as required by the referenced methods.

Pace Report No. 50372019:

- For LCS laboratory sample number 3605157, the vinyl acetate spiked percent recovery was found to be above its upper control limits. Results for this analyte may be biased high in the associated equipment blank samples. This analyte was not detected above the reporting limit in the equipment blank sample.

Pace Report No. 50372470:

- For LCS laboratory sample number 3609512, the vinyl acetate spiked percent recovery was found to be above its upper control limits. Results for this analyte may be biased high in all of the groundwater samples submitted. This analyte was not detected above the reporting limit in any of the submitted groundwater samples.

All other LCSs were within their respective percent recovery limits.

**6.2 Duplicates**

**6.2.1 Laboratory Duplicates**

Pace Report No. 503742019 Quality Control Data summary report indicated that three soil moisture laboratory duplicates were included in the data set associated with the submitted soil samples. The duplicate sample report is summarized below:

Laboratory QA/QC Duplicate Summary					
Sample ID	Duplicate ID	Analyte	Sample Value	Duplicate Value	RPD
					%
<b>Pace Report No. 50372019</b>					
50372019019	3612739	Moisture (%)	17.9	17.2	4
50372114019	3613553	Moisture (%)	5.2	8.2	40
50372114020	3613554	Moisture (%)	14.2	15.4	8

The RPDs for one of the soil duplicate samples were outside of the laboratory's internal control standards for moisture (10%) but complied with the QAPP objectives.

No other laboratory duplicates (other than MS/MSD discussed in section 6.1 above) were noted in the data packages.

#### **6.2.2 Field Duplicates**

Water matrix samples can be readily duplicated due to their homogeneous nature; conversely, the duplication of soil or sediment samples is much more difficult due to their non-homogeneous nature. The QAPP indicates that an RPD of  $\pm 50$  percent and  $\pm 100$  percent for water and soil sample field duplicates, respectively, will be used as advisory limits for analytes detected in both investigative and field duplicate samples at concentrations greater than or equal to five times its quantitation limit. The field duplicates were evaluated by calculating the percent difference. The field duplicate IDs were provided to the validator as shown in the table below. Note that values near or below the RL would be expected to be wider than others.

As indicated in the following table, the RPDs of the individual groundwater field duplicate analytes were found to be in compliance with the QAPP objectives.

Field Duplicate Groundwater RPD Summary							
Sample ID	Duplicate ID	Analyte	Sample Conc.	RL	Duplicate Conc.	RL	RPD
			$\mu\text{g/L}$	$\mu\text{g/L}$	$\mu\text{g/L}$	$\mu\text{g/L}$	%
Pace Report No. 50372470							
NW-GW-GP02	NW-GW-FD01	Arsenic	45.2	10.0	35.6	10.0	23.8
		Barium	116	10.0	112	10.0	3.5
		Barium, dissolved	63.0	10.0	62.8	10.0	0.3
		Chromium	30.4	10.0	27.0	10.0	11.8
		Lead	16.1	10.0	14.4	10.0	11.1

As indicated in the following table, the RPDs of the individual soil field duplicate analyte were found to comply with the QAPP objectives regardless of being detected at concentrations equal to or greater than five times their quantitation limit.

Field Duplicate Soil RPD Summary							
Sample ID	Duplicate ID	Analyte	Sample Conc.	RL	Duplicate Conc.	RL	RPD
			mg/kg	mg/kg	mg/kg	mg/kg	%
<b>Pace Report No. 50372019</b>							
NW-SL-SS03 (0.0-1')	NW-SL-FD1	Acenaphthylene	0.073	0.028	0.16	0.028	74.7 <sup>1</sup>
		Anthracene	0.069	0.028	0.13	0.028	61.3 <sup>1</sup>
		Benzo(a)anthracene	0.13	0.028	0.21	0.028	47.1 <sup>1</sup>
		Benzo(a)pyrene	0.21	0.028	0.35	0.028	50.0

		Moisture (Percent)	13.5	0.10	12.3	0.10	9.3

<sup>1</sup> An analyte concentration is less than five times its quantitation limit.

## 7.0 COMPOUND IDENTIFICATION, QUANTITATION, AND REPORTED DETECTION LIMITS

The analytes reported were appropriate for the intended use of the data. Target compounds for the analyses were appropriately identified in the quality control samples and the field samples. Sample-specific RLs were calculated and reported for the analyses. The RLs were adjusted for the dilution of the sample.

In general, the MDLs and RLs were acceptable and the quantitation limits were found to be acceptable for the data's intended use (comparison to the IDEM's R2 PLs). The following RLs above an R2 PL were noted:

- The groundwater RLs for all samples were above their respective R2 PLs for the analytes acrolein, acrylonitrile, 1,2-dibromoethane (EDB), trans-1,4-dichloro-2-butene, hexachloro-1,3-butadiene, 1,1,2,2-tetrachloroethane, and 1,2,3-trichloropropane due to the quantitation limits for these analytes by the laboratory.

## **8.0 DOCUMENTATION**

A copy of the COC record documenting all samples submitted to the laboratory in this group was included in the data package. In general, the COC documentation was accurately completed and included appropriate sample receiving information. The COC contained no minor deviation from protocol.

## **9.0 OTHER**

On May 6, 2024, a quality assurance field audit was performed at the subject site. The purpose of the audit was to observe and oversee assessment activities to ensure that sampling methodology, sample preservation methods, and COC procedures were followed. The field audit was part of the QAPP quality control requirements to ensure that the environmental data collected is of the highest standard feasible as appropriate for the intended application. The field audits are a means to ensure that the QAPP and the property-specific SAPs are adhered to and that all samples are properly handled and analyzed to satisfy the comparability of field data.

No data collection activities were observed during the sampling event that would adversely affect the integrity of the samples collected. Based upon the findings of the field audit, the data derived from the sampling event are scientifically defensible, properly documented, of sufficient quality to meet the project objectives, and determined to be usable without limitations (subject to QA/QC review of the laboratory results).

## **10. OVERALL ASSESSMENT**

In general, the COC documentation was accurately completed and included appropriate sample receiving information. The COC contained no deviations from protocol.

In general, the MDLs and RLs were acceptable and quantitation limits were found to be acceptable for the data's intended use (comparison to IDEM's R2 PLs).

Method blanks were prepared and analyzed as required by the referenced methods. No target compounds were detected above their respective MDLs.

Trip blanks were utilized in coolers containing samples for VOC analyses. All trip blanks were reported as non-detect.

A soil sampling equipment blank (NW-SL-EB1) and a groundwater sampling equipment blank (NW-GW-EB01) were prepared in the field after the sampling equipment was field decontaminated. The equipment sample blanks were reported as non-detect.

Surrogates, internal standards, MS/MSD samples, and LCSs were prepared and analyzed as required by the referenced method(s). Multiple analytes were found to be outside of control limits in several MS/MSD and LCS samples. The RPD of several analytes was also to be outside of control limits. The data was properly qualified/annotated and referenced in the laboratory Quality Control Data summary and no additional data qualification is required. Additionally, sufficient QA/QC information exists to support the conclusion that the control limit exceedances do not impact the usability of the data for its intended use. The RPDs for the field duplicate soil analytes were found to comply with the QAPP objectives in comparing NW-SL-SS03 (0.0-1') and

NW-SL-FD1, as well as the laboratory duplicates. The RPDs of the groundwater field duplicate analytes detected at concentrations equal to or greater than five times their quantitation limit were found to be in compliance with the QAPP objectives in comparing NW-GW-GP02 and NW-GW-FD01.

Based on this DAR, the results for the analyses of the samples reported in the Norfolk & Western Railroad property data set (Pace Report Nos. 50372019 and 50372470) were determined to be acceptable for their intended use within the limitations described above.

## EXECUTIVE SUMMARY

IWM Consulting Group, LLC (IWM Consulting) prepared a Quality Assurance Project Plan (QAPP) for the Community-Wide Assessment Grant (CWAG) Initiative of the Lafayette Target Area which was submitted to the United States Environmental Protection Agency (EPA) on August 11, 2023, and approved by the EPA and Indiana Brownfields Program (IBP) on August 23, 2023. Mr. Christopher Schoo, an IWM Consulting Quality Assurance Manager, completed this Data Assessment Report (DAR) for soil gas vapor samples submitted for volatile organic compounds (VOCs) from the Norfolk & Western Railroad property located at South 5<sup>th</sup> Street and 5<sup>th</sup> Street Northeast in Lafayette, Tippecanoe County, Indiana. The samples were collected on May 2, 2024. The samples were analyzed by Pace Analytical National (Pace) of Mount Juliet, Tennessee. The following laboratory report was generated: Pace Project Number L1732333.

Pace Report No. L1732333 includes three soil vapor samples and one duplicate sample, although due to insufficient sample volume in NW-SGe02, only two samples were analyzed.

The Chain-of-Custody (COC) documentation was accurately completed and included appropriate sample receiving information.

The method detection limits (MDLs) and reported detection limits (RDLs) were acceptable and quantitation limits were found to be acceptable for the data's intended use [comparison to the Indiana Department of Environmental Management (IDEM) *Risk-Based Closure Guide* (R2) Published Levels (PLs)].

No detections occurred in the laboratory method blanks. A laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) were prepared and analyzed as required by the referenced method. All LCS/LCSD sample results were within their respective percent recovery limits.

Based on this DAR, the results for the analyses of the samples reported in the Norfolk & Western Railroad Property data set (Pace Report No. L1732333) were determined to be acceptable for their intended use.

## **1.0 INTRODUCTION**

Soil vapor samples were analyzed for volatile organic compounds (VOCs) using United States Environmental Protection Agency (EPA) analytical Method TO-15.

To the extent applicable, this data assessment was performed following the Quality Assurance Project Plan (QAPP) dated August 11, 2023. The data assessment process is intended to evaluate data on a technical basis in addition to a method compliance basis, rather than on a contract compliance basis. The data package as received from the laboratory must contain sufficient raw data documentation to facilitate the assessment process and allow verification of all reported sample results. The review is based on the data provided by the laboratory and assumes that it is accurate, true, and complete. In addition, professional judgment was applied as necessary and appropriate.

## **2.0 PRESERVATION, SAMPLE INTEGRITY, AND QA/QC SAMPLES**

The samples were received in good condition. The following observations were noted:

- Chain-of-Custody (COC) documentation was utilized.
- The COC documentation was accurately completed and followed proper protocol.
- The final field, post-sampling Summa canister vacuum levels were recorded and were within acceptable limits.
- Custody Seals were not utilized on the soil vapor sample shipping container(s). The aforementioned container(s) were shipped to the laboratory via FedEx. The final field vacuum pressures recorded in the field for the Summa air canisters were in conformance with the laboratory receiving vacuum pressures.
- The samples arrived intact and no loss or breakage was noted.
  - The QAPP field completeness goal of 90% for samples collected/analyzed was achieved.
- The samples were delivered within the respective sample holding time(s).
- The samples contained sufficient sample volume except sample NW-SGe02 which could not be analyzed.
- The soil vapor sampling event utilized the correct containers.
- The sample labels in the soil vapor sampling shipping container(s) matched the COC.
- The shipping container(s) containing samples utilized in Pace Report No. L1732333 contained:
  - Three soil vapor samples and one duplicate sample.
- The soil vapor sampling utilized batch-certified Summa canisters.
- The QAPP field duplication rate (1:20) was observed.
- The sample designations were found to be appropriate and in compliance with the QAPP.

## **3.0 HOLDING TIMES, ANALYTICAL METHODS, METHOD DETECTION LIMITS (MDLs), REPORTED DETECTION LIMITS (RDLs), UNITS, AND DATA QUALIFICATIONS UTILIZED**

The laboratory analytical reports were acceptable for the intended use of the data. The following observations were noted:

- The samples were analyzed within the established holding times.
- The analytical methods utilized were appropriate.

- The analytical methods utilized were properly noted/cited.
- The method detection limits (MDLs) and reported detection limits (RDLs) were acceptable and quantitation limits were found to be acceptable for the data's intended use [comparison to the Indiana Department of Environmental Management's (IDEM's) *Risk-Based Closure Guide* (R2) Published Levels (PLs)].
- The dilution factors (DL) were properly noted.
- The units of measure were appropriate.
- Data qualifiers for individual samples and/or parameters were utilized as appropriate.

## **4.0 BLANKS**

Method blanks were prepared and analyzed as required by the referenced method. No target analytes were detected in the method blanks.

## **5.0 SURROGATE RECOVERY**

Surrogate standards were added to the quality control (QC) and soil vapor samples as required by the referenced methods. None of the laboratory QC samples surrogates or soil vapor sample surrogate recoveries exceeded their respective laboratory control limits.

## **6.0 SPIKED ANALYSES**

### ***6.1 Laboratory Control Samples***

Laboratory control samples (LCS) and laboratory control sample duplicates (LCSD) were prepared and analyzed with each analytical batch as required by the referenced method. The LCS/LCSD samples (R4066373-2/R4066373-3) results were within their respective percent recovery limits. The relative percent difference (RPD) for the LCS/LCSD samples were within their control limits (25%).

### ***6.2 Field Duplicates***

Soil vapor samples can normally be readily duplicated due to their homogeneous nature. The field duplicate was evaluated by calculating the RPD. The field duplicate ID was provided to the validator as shown in the table below. Note that values near or below the RDL would be expected to be wider than others.

As indicated in the following table, the soil vapor duplicate sample (NW-SGe-FD1) displayed conformance to the associated parent sample (NW-SGe03) for analytes detected in both samples at concentrations equal to or greater than five times their quantitation limit and were found to comply with the QAPP objectives.

Field Duplicate Soil Gas Vapor RPD Summary								
Sample ID	Duplicate ID	Analyte	Sample Conc.	RDL	Duplicate Conc.	RDL	RPD	
			µg/m³	µg/m³	µg/m³	µg/m³	%	
L1732333								
NW-SGe03	NW-SGe-FD1	Benzene	8.15	0.639	7.95	0.639	2.5	
		Cyclohexane	24.3	0.689	38.6	0.689	45.5	
		Ethanol	7.49	4.71	13.7	4.71	58.6 <sup>1</sup>	
		Ethylbenzene	1.76	0.867	1.73	0.867	1.7 <sup>1</sup>	
		4-ethyltoluene	2.22	0.982	<0.982	0.982	NC	
		Trichlorofluoromethane	1.17	1.12	2.33	1.12	4.4 <sup>1</sup>	
		n-heptane	32.4	0.818	32.7	0.818	0.9	
		n-hexane	64.2	2.22	102	2.22	45.5	
		2-Butanone (MEK)	<3.69	3.69	3.69	3.69	NC	
		2-propanol (isopropanol)	<3.07	3.07	3.12	3.07	NC	
		Tetrachlorethylene	2.53	1.36	2.55	1.36	0.8 <sup>1</sup>	
		Toluene	14.5	1.88	14.7	1.88	1.4	
		1,2,4-trimethylbenzene	1.76	0.982	1.66	0.982	5.8 <sup>1</sup>	
		Total xylenes	4.18	2.60	4.40	2.60	5.1 <sup>1</sup>	

<sup>1</sup> An analyte concentration is less than five times its quantitation limit.

NC-not calculable.

## 7.0 COMPOUND IDENTIFICATION, QUANTITATION, AND REPORTED DETECTION LIMITS

The analytes reported were appropriate for the intended use of the data. Target analytes for the TO-15 analysis were appropriately identified in the quality control samples and the field samples. Sample-specific RDLs were calculated and reported for the analyses. The RDLs were adjusted for the dilution of the sample.

The MDLs and RDLs were acceptable and quantitation limits were found to be acceptable for the data's intended use (comparison to the IDEM's R2 Published Levels).

## 8.0 DOCUMENTATION

A copy of the COC record documenting all samples submitted to the laboratory in this group was included in the data package. The COC documentation was accurately completed and included appropriate sample receiving information.

## 9.0 OTHER

Based on a review of field documentation, no data collection activities were noted during the sampling event that would adversely affect the integrity of the samples collected. The data derived from the sampling event are scientifically defensible, properly documented, of sufficient quality to meet the project

objectives, and determined to be usable without limitations [subject to quality assurance/quality control (QA/QC) review of the laboratory results].

## **10.0 OVERALL ASSESSMENT**

The MDLs and RDLs were acceptable and quantitation limits were found to be acceptable for the data's intended use (comparison to the IDEM R2 Published Levels).

No detections occurred in the laboratory method blanks. An LCS and LCSD were prepared and analyzed as required by the referenced method. All LCS/LCSD laboratory samples were within their respective percent recovery limits and RPD limits.

Based on this DAR, the results for the analyses of the samples reported in the Norfolk & Western Railroad Property data set (Pace Report No. L1732333) were determined to be acceptable for their intended use.
