Hello,

Attached is the construction documentation report for the 2024 Phase 1 GCCS construction at the National Serv-All Landfill. Thank you and let us know if you have any questions.

Thanks,

Bryan de Varona, P.E.

B-1 Pipe Installation Summary
B-2 Pipe Pressure Testing Summary

Appendix C Daily Field Reports

Appendix D Record Drawings

Appendix E Construction Drawings

1 INTRODUCTION

This construction documentation report details the materials, construction/installation methods, and observation/documentation and tests performed for the 2024 landfill gas system construction at the National Serv-All Landfill located in Fort Wayne, Indiana. This construction project included the installation of Lateral pipelines during the period of March 12, 2024, to May 6, 2024. The installation was performed in accordance with the Construction drawings titled "2024 Phase 1 GCCS Construction, National Serv-All Landfill, Fort Wayne, Indiana", prepared by Tetra Tech, and the landfill gas collection and control system (GCCS) design plan.

This report details the results of the construction quality assurance (CQA) services provided by Weaver Consultants Group (WCG) during the construction of the 2024 landfill gas system.

1.1 Involved Parties

The following parties were involved in the 2024 Landfill Gas System construction at the National Serv-All Landfill:

- National Serv-All Landfill, Inc. – Owner
    - Stephanie Goodman – Environmental Manager
    - Sean Conklin – Landfill Operations Manager
    - David Bussard – General Manager
- Tetra Tech – Design
    - Jakub Sowa – Design Engineer
- Weaver Consultants Group (WCG) – Construction Quality Assurance
    - Bryan de Varona –Certifying Engineer
    - James Sandmel – CQA Monitor
- Continuum Environmental Services (CES) – Piping Contractor
    - Jason Carter – Project Manager
    - John Beeman – Operations Manager
- Lakewood Surveyors, Inc. (Lakewood) – Surveying Services
    - Ryan Weber – Field Survey Supervisor

1.2 Governing Plans and Specifications

The governing plans and specification for the construction of the gas system expansion were as follows:

- 2024 Phase 1 Gas System Construction Drawings for the National Serv-All Landfill, issued for construction March 2023, prepared by Tetra Tech.

2 LANDFILL GAS COLLECTION SYSTEM

WCG provided on-site CQA for the installation of gas collection lines, and associated components. The gas collection lateral lines installed during this event consisted of 24-inch SDR 17, 8-inch SDR 11, 6-inch SDR 11, 6-inch SDR 17, 3-inch SDR 11, 3-inch SDR 9, and 2-inch SDR 9 high-density polyethylene (HDPE) pipe. A pipe installation summary can be found in **Appendix B-1.**

Piping was fusion welded and placed in the trenches in accordance with the manufacturer recommendations. The pipe and fittings were visually inspected for conformance with the construction drawings, as well as to document there were no signs of damage. The components were determined to be in conformance with the construction drawings and no visual damage to the components was observed. Butt-fusion welds were visually inspected prior to backfilling the trenches. WCG observed hot plate temperature, holding times, and welding techniques which were consistent with the manufacturer's guidelines.

HDPE piping for this project was air pressure tested after being placed in the excavated trenches. Air tests for landfill gas pipes were conducted over a one (1) hour time period for the lateral pipes. The lateral piping was pressurized to 4 pounds per square inch (psi) for one (1) hour Air tests for leachate and compressed air pipes were conducted over one (1) hour time period. The piping was pressurized to 4 pounds per square inch (psi) for thirty (30) minutes, then pressurized to one hundred (100) pounds per square inch (psi) for an additional thirty (30) minutes. In order to achieve a passing result, the pressure after one (1) hour of testing could not vary by more than 10%. HDPE piping for the project was observed to meet air pressure testing requirements. Results for the HDPE air pressure testing are included in **Appendix B-2.**

Trenching and excavation for the piping installation was performed using a Caterpillar 323 Excavator. Piping was placed on a minimum 6-inches of soil bedding prior to installation. Metallic warning tape was placed in the soil backfill atop the piping at approximately 12-inches below the existing grade. Plastic pipe markers were installed upon completion of the trench backfill.

2.1 Pipe Installation

WCG provided on-site CQA for the completion of the lateral piping to new gas extraction wells. The piping installation is summarized below. The locations of the new piping are shown on the Record Drawings in **Appendix D.** Changes were made to the original construction design and are mentioned throughout the piping installation section.

- Approximately 720 lf of 24-inch HDPE SDR 17 landfill gas header pipe was installed. The pipe was installed in an out-of-waste trench adjacent to the perimeter road. The pipe was tied into the out-of-waste condensate sump CS-D8.
- Approximately 720 lf of 3-inch HDPE SDR 11 air line and 3-inch by 6-inch HDPE dual contained force main were installed in the same trench as the 24-inch header. The dual contained force main was placed on the outside (farther away from the solid waste boundary) of the 24-inch header and the air line was placed on the inside of the 24-inch header. Stubs were provided at locations of future tie-in.
- Two CMP road casings were installed to protect the 24-inch header on the north side of Cell 4B.
- Approximately 510 linear feet of 12-inch HDPE SDR 17 pipe was installed on the north side of Unit II to replace a malfunctioning portion of the existing header pipe.
- Survey markers were placed at 50-foot intervals along the pipelines and at fitting locations. The survey markers were removed following completion of the field survey activities.
- Locations of the pipelines, components and appurtenances are provided on the record drawings in **Appendix D.**

2.2 Condensate Pump Station

WCG provided on-site CQA for the installation of the condensate pump station CS-D9 and the associated condensate force main (referred to as the "ozone" force main). The out-of-waste condensate pump station consisted of a 36-inch diameter SDR 26 HDPE pipe with a 48-inch diameter containment installed around the bottom 10 feet of the pump station. Inside the 36-inch pipe a 6-inch diameter SDR-17 HDPE pipe was installed to house the pump and act as a vacuum break to the header system. The lower portion of the 6-inch pipe was perforated. The condensate pump station was installed in-line with the 24-inch header. The soil was excavated to an approximate depth of 20-feet to install the sump vertically at its location. The total length of the sump is 23-feet with approximately 3-feet installed above grade. The sump included the installation of a pneumatic pump for removal of collected condensate. The pneumatic pump was connected to the 3-inch diameter SDR-9 HDPE air header also installed in the 24-inch header trench for operation of the pump. The discharge line from the pneumatic pump was connected to the 3-inch by 6-inch diameter SDR-11 HDPE dual contained ozone force main also installed in the same trench as the 24-inch header. The ozone force main was installed to direct the liquid

from the condensate pump station to the ozone system located at the flare. The location of the condensate pump station and associated piping is shown on the record drawings located in **Appendix D.**

3 SUMMARY

Weaver Consultants Group (WCG) was retained by Republic Services of Indiana, LP. to provide CQA services during the construction of the 2024 Phase 1 Gas System at the National Serv-All Landfill located in Fort Wayne, Indiana. The services provided included CQA of the lateral piping, associated fittings, and pressure testing of the piping. Based on the observations documented in this report, the Gas System Construction was installed in compliance with the approved CQA Plan and the construction plans provided by Tetra Tech.

Construction photographs are presented in **Appendix A.** A summary of construction activities that was documented by WCG personnel on Daily Field Reports can be found in **Appendix C.** Record drawings of the constructed gas system surveyed by Lakewood is presented in **Appendix D.**

APPENDIX C

Daily Field Reports

Weaver Consultants Group
Daily Field Report

Day/Date: Wednesday 03/06/2023

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Overcast 45 F
Client:	Republic Services	PM:	Overcast 36 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum begin welding stringers of 24" HDPE pipe in preparation for future header. Sticks of approximately 200 feet were welding. The shavings were removed to ensure proper welding of the pipe.

Observed Continuum continue to dress and back fill areas affected by on going construction events. Clean backfill soil was hauled and placed to dress trenches and depressions of excavated areas.

Observed Continuum replace the well head at C26. The well head was broken due to a clump of soil hitting it from on going site dressing. The air and force main risers were dressed to be straightened up.

The parts staging area on the top north side of the "C" hill was consolidated and organized for inventory of parts. The inventory, once completed, is in preparation of up coming construction.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer's recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Weaver Consultants Group off site 6:00 PM

Daily Field Report

Day/Date: Monday 03/18/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Snowing 39 F
Client:	Republic Services	PM:	Snowing 27 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum continue to fusion weld stringers of 6", 3"x6" pipe, and 24" pipe. Stringer lengths are approximately 200'. Pipes are inspected to ensure shavings, dirt, and stone are cleaned out.

Observed Continuum inspecting and adjusting the canaflex hose on each well drilled for construction. The hoses were trimmed and adjusted to allow maximum flow without obstruction from watering in at bellies.

Observed Continuum build and install the ball valves for the ozone and force main clean out risers. The valve was installed on the 3" S.S. tee before the gauge. The cleanouts were inspect to ensure the camlock dust caps were in place.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer's recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Daily Field Report

Day/Date: Tuesday 03/19/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Cloudy 36 F
Client:	Republic Services	PM:	Cloudy 51 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum excavate and locate the 24” flange on the south end of the condensate sump that was installed phase 3 2023. The area was excavated to expose an existing 12” header. The header was cut and a section was removed. Each end of the 12” header was capped with a end cap and fusion welded. The blind flange on the sump was removed. a 24” butterfly valve was installed with valve spacers to allow clearance of the valve. The valve was exercised to ensure smooth operation.

Observed Continuum pull the pump at GW-C26R. Once removed, the well casing was lowered by cutting approx.. 3 feet off. A new flange was fusion welded on. A new pump and tri-tubing set was installed and lowered into the well. The wellhead installed and reconnected to vacuum.

Observed Continuum remove the wellhead from GW-C28. Once removed the well casing was extended by fusion welding approx. 4 feet for 6” HDPE pipe. Once completed, the wellhead was reinstalled and connected to vacuum.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Day/Date: Wednesday 03/20/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Cloudy 37 F
Client:	Republic Services	PM:	Clear 49 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum Begin trench for the 24” header. Moving south from the sump. The 3”x6” force main line was located and excavated around with out major damage to the pipe. A small gash in the outer pipe was witnessed. Repairs will be made prior to back filling. The operator ripped and damaged unknown electrical lines that were not marked nor shown on the drawing. The site was contacted and discovered it was the signal loop. Excavation continued south and the existing force main was also located without damage. Excavation continued to the first proposed header access riser location.

Observed Continuum begin fusion welding fittings to construct the proposed header access riser as well as the future tie-in point.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Weaver Consultants Group on site 7:00 AM

Observed Continuum continue fusion welding fittings to construct the proposed header access riser as well as the future tie-in point. The HAR-1, future tie-in point, and the 90 elbow were constructed as per the proposed design. The constructed HAR and tie-in point were fusion welded to the 24" pipe. Carefully measured to ensure proper placement.

Observed Continuum continue to trench from the proposed header access riser location to the first road crossing. The trench was excavated at a 0.85% grade.

The constructed header was placed in the trench and guided under the force mains and electrical lines as to not damage existing crossings. Once the header was in the approximate location, the pipe was cleared of any debris during the placement of the pipe.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer's recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Weaver Consultants Group
Daily Field Report

Day/Date: Friday 03/22/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Cloudy 30 F
Client:	Republic Services	PM:	Cloudy 41 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum complete the bolt up of the 24” header to the sump. A blind flange was added at station 1+35 to allow better installation of the road crossing. The 24” header grade was shot to ensure proper slope.

Observed Continuum fusion weld and assemble the ozone force main clean out and valve. The section of 3”x6” pipe was then tied-in at the existing sump. The ozone force main will sit to the outside of the 24” pipe in the trench with the 3” air sitting to the inside. The trench was partially backfilled to allow installation of the 3”x6” pipe

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Weaver Consultants Group
Daily Field Report

Day/Date: Saturday 03/23/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Cloudy 28 F
Client:	Republic Services	PM:	Cloudy 38 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum begin the first road crossing. The trench was excavated up to the approximate location of HAR-2. The section of 24” to include HAR-2 and the future tie-in point. 40 feet of 48” CMP was installed around the 24” section. The entire assembled section was lowered in to the trench and ensured the placement of the CMP. 3” and 3”x6” pipe were fed through the CMP and fusion welded to the previously installed sections of pipe. The road crossing was backfilled and compacted to allow the resuming passing of traffic. Survey risers were added at both ends of the road crossing.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Daily Field Report

Day/Date: Monday 03/25/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Cloudy 48 F
Client:	Republic Services	PM:	Clear 68 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum begin excavating at the proposed location for the sump. The top 6 feet approximately comprised of stone, soil, and clay. Below this the excavation slowed due to sand and fine gravel. Once the required depth was reach, a 1 foot layer of gravel was placed in the excavation. As the sump was being lowered the side continued to undercut and cave in. The operation of setting the sump was halted. The sump was set in the hole but remained unbolted to the 24" pipe. Additional equipment will be required to continue.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer's recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Client:	Republic Services	PM:	Cloudy 52 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum continue the trenching operations for the 24” header. The second road crossing was blocked off for safety and excavation continued. The 48” CMP was prepared for the installation of the road crossing. Upon reaching the end of the road crossing, they continued with the trench. The force main and signal loop were successfully located and excavated the area without damage to the pipe or electrical lines. Approximately 30 feet south, Continuum hit an electrical line. The line was not marked or staked for location. This line did not appear on any drawing or map. The crew immediately cleared the area until it was confirmed the lines were no longer live.

Observed Continuum proceed to install the 24” header from the sump, moving south. 60 feet of CMP installed at the eastern road crossing. Approximately 240 feet of 24”, 3”x6”, and 3” pipe installed.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Client:	Republic Services	PM:	Sunny 69 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum complete the bolt up of the 24” pipe to the sump. The bolts were coated with a rubberizing spray and wrapped in plastic. The 24” valve extension was installed on the valve for the sump. Continuum backfilled and dressed the road crossing to restore vehicle traffic. Survey risers were installed to mark the edges of the CMP.

Observed Continuum assemble and install the 3” isolation for the 3” air line. The valve was installed between the future tie in and the air riser for the sump. The isolation valve was assembled in accordance with the design plan.

Observed continuum install the 3” valve extension on the force main isolation valve running to GW-D148. The area was not backfilled to allow access to pinching off the ozone force main for future installation.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Raining 39 F
Client:	Republic Services	PM:	Raining 45 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum continue trenching for the 24" header line. The trench was excavated at a 0.8% slope with a laser. While trenching it was observed that the pipe will end short to maintain minimal 2 feet of cover. Jakub Sowa was contacted and approved the pipe stopping short by approximately 50 feet to maintain proper cover.

The remaining length of pipe was welded and assembled to include HAR-3, the isolation valve and future tie-in flange.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer's recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Overcast 42 F
Client:	Republic Services	PM:	Overcast 51 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum complete the bolt up of the 24” pipe. Once all sections of pipe were placed, survey risers were placed and backfilling began. The trench was backfilled and risers adjusted. The ditch line running along the trench was dressed and graded to allow proper flow of storm water.

The perimeter road was dressed and clean to restore traffic flow for the site.

The 3” air isolation valve was assembled and installed at CS-8. The air was tied-in to the existing air line. The ozone forcemain isolation valve was removed and repaired to ensure proper dual containment by adding an end seal to the open end of the dual contained valve. Once repaired, the valve was reinstalled on the ozone force main.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Daily Field Report

Day/Date: Saturday 04/06/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Cloudy 43 F
Client:	Republic Services	PM:	Sunny 58 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum begin the road crossing for the 4 remote wells D-170, 171,172, and 173. The trench was shot in at 3% per the design plan. The 6” pipes was ran through 18” CMP. The CMP measured 40 feet long, with 2 runs installed. Two 6” pipes were ran in each CMP. The pipes for the road crossing were welded to the previously installed 6” pipe running to each well. The vacuum manifold was assembled and build per the design plan.

Observed continuum pressure test the perimeter 3” air line. The pressure test was completed in accordance with Republic Services’ SOP. The 3” air test was passed.

Observed Continuum begin the pressure test for the header and sump. While pressurizing the header, multiple leaks were detected on the sump. A leak on the equalizing valves was detected and repaired by tightening the joint. A leak was detected at the sample port on the lid. The connection was tightened. A leak of the gasket for the 36” lid was detected. The air was shut off and the lid clamp was being tightened. While tightening the bolts for the lid, one of the bolts sheered off. The lid clamp failed and the test was unable to continue.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Day/Date: Monday 04/08/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Cloudy 41 F
Client:	Republic Services	PM:	Sunny 64 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum begin the pressure tests for the 4 remote wells. Each remote line had a cap fusion welded to both ends. The lines were pressurized to 4 psi, as per Republic Services SOP. The pressure was monitored for 60 mins. Air loss less than 10% was observed, qualifying for a passing test.

Observed Continuum begin the air tests for the 3”x6” ozone for main running along the perimeter. The inner pipe and outer pipes were tested separate to ensure proper containment of both pipes. Both inner and outer pipes passed the test.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Daily Field Report

Day/Date: Tuesday 04/09/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Cloudy 43 F
Client:	Republic Services	PM:	Sunny 61 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum begin to tie-in the remote lines to the proposed gas wells. Each well was excavated approximately 7 feet. The top section of pipe, approximately 5 feet, was cut and removed from the well. A 8” tee was welded atop the remaining well pipe. The section of pipe that was cut and removed was fusion welded on top of the tee. They added an 8”-6” reducer to each tee. The previously installed 6” lines were welled to the reducer.

Observed Continuum tie-in to the existing vacuum line in the area of GW C-68. From the tie-in point, the previously assembled manifold was installed. Each of the remote well lines were installed, organized to reflect their placement as installed, at the manifold. Well heads were installed and ensured they were 100% closed for proper start up.

SCS was notified of the completion of the remote wells for start up.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum backfill the trenches and excavated areas of the remote wells. Clean soil was hauled for dressing and to restore the area to previous conditions. The storm water berms were reconstructed where they were removed for access to the gas wells. The remote lines were properly marked with gas line markers every 50 feet. The road crossing marked easier locating by site personal. The sumps CS-8 and CS-9 were back filled and dressed. The flange connections for the valves were coated and wrapped in plastic prior to backfilling. The area was dressed and berms restored.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer's recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Weaver Consultants Group on site 7:00 AM

Observed Continuum fusion weld sections of 12” HDPE pipe in preparation of the header replacement on the north side of the C-hill. The replacement was measured and documented all tie-in points along the line. 12” tees with reducers down to 6” were assembled and welded.

Observed Continuum weld sections of 6” pipe in preparation for the lateral replacement on the west side of the D-hill.

Approximately 600 feet of 12” welded.
Approximately 400 feet of 6” welded.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Daily Field Report

Day/Date: Saturday 04/13/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Clear 45 F
Client:	Republic Services	PM:	Sunny 65 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum excavated and locate the existing 12” header in the area of C-7, on the northwest corner of the C-hill. The existing 12” was cut and capped on the side to be abandoned. They tied-in to the valve side and began trenching toward the east along the staked points. The trench was excavated at 5% with a laser to verify grade. A tee was welded at approximately station 1+98 for the riser at C-8. The existing riser at C-8 was cut and capped below grade. A new riser installed and cap welded to seal the riser for the future air test.

Approximately 250 feet of 12” installed.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Day/Date: Tuesday 04/16/2024

Project:	GCCS Ph 1 Construction	Project No.	0120-555-53-10
Location:	NSA Landfill, Fort Wayne, IN	Weather: AM:	Clear 46 F
Client:	Republic Services	PM:	Overcast 81 F
Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum replace the valve at C7 along the 12” header. The existing valve was not attaining a tight seal. The valve was replaced and the existing valve stem reinstalled. Sample ports were added to the valve replacement. The bolts were coated and wrapped in plastic per the design plan. The 12” header was air tested between valves once the bolt up was complete. The air test was a pass.

Observed Continuum cut and remove the previously installed 6” jumper running from C7 to C10. The vacuum was isolated and the 6” pipe cut, removed, and capped at the risers. The vacuum was restored allowing the vacuum along the 12” to bring online. Once installation and pressure testing was complete, the area was backfilled and dressed.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer’s recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum replace the band clamp on the condensate sump CS-9. The band was tightened to ensure a proper seal. The sump and 24" header was sealed and prepped for pressure testing. The sump and header pressure test was a pass.

Observed Continuum begin the installation of the 6", 3" , and 2" lateral lines running from D5A to D64A. at the location of D64A, the 3" lateral lines were installed with 3" wyes to ensure proper flow from the force mains being tied-in to. 3" x 6" dual contained pipe was installed from D5A until crossing over the anchor trench of the cap. Once beyond the anchor trench, the force main transitioned to 3" single walled pipe. The lines were all pressure tested in accordance with the Republic Services S.O.P. and passed. The 3 tie-ins at D5A were completed. Vacuum, Force main, and air restored to D64A and D162.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer's recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

Contractor(s):	Continuum Environmental Services		
Contractor Sub(s):			

Summary of Technical and/or Engineering Services performed, including Field Test Data, Locations, Elevations and Depths are Estimated.

Weaver Consultants Group on site 7:00 AM

Observed Continuum excavate and investigate around the tie-in point for GW-D134B. Continuum was informed that the site believes there to be an issue with the tie-in from previous construction. The tie-in was excavated and no visible issues were discovered. Per Stephanie Goodman, The force main line with D134B, D163, and D164 will be directed and tied into the force main between D120B and D135. The liquid flows were directed with 3" wyes and sweeping elbow to allow greatest flow without resistance. New laterals and risers were installed from the tie-in point east of D120B to D135 to allow air and force main access to the gas well for future pump installation by the site.

Fusion welding of HDPE pipe was performed in accordance with the manufacturer's recommendations and Republic Services Standard Operating Procedures. Contractor removed shavings from the pipe during welding operations and no obstructions were observed in the pipe after welding.

Photos were taken for documentation.

NOTE:

THE EXISTING UTILITIES SHOWN ON THESE DRAWINGS ARE APPROXIMATE, AND UTILITY LINES MAY EXIST WHERE NONE ARE SHOWN. SOME INFORMATION MAY HAVE BEEN DERIVED FROM INFORMATION PROVIDED TO THE ENGINEER BY OTHERS. SUCH INFORMATION MAY BE INCOMPLETE OR MAY BE OBSOLETE BY THE TIME CONSTRUCTION COMMENCES. CONTACT INDIANA 811 AT 1-800-382-5544 OR CALL 811 (OR UTILIZE THEIR E-LOCATE SERVICE) AND ANY NON-PARTICIPATING UTILITY COMPANIES AT LEAST 48 HOURS BEFORE CONSTRUCTION. THE CONTRACTOR SHALL EXCAVATE AND VERIFY THE HORIZONTAL AND VERTICAL LOCATIONS OF PERTINENT UTILITIES, LANDFILL LINERS, AND OTHER EXISTING FEATURES IN OR NEAR THE AREA OF WORK, WHETHER INDICATED ON THESE DRAWINGS OR NOT. SHOULD A CONFLICT EXIST, THE CONTRACTOR SHALL NOTIFY THE ENGINEER AS SOON AS POSSIBLE. THE CONTRACTOR SHALL EXERCISE DUE CARE TO AVOID DISTURBING ANY UNDERGROUND UTILITIES. THE CONTRACTOR SHALL COORDINATE ANY POTENTIAL DISRUPTIONS IN UTILITY SERVICE WITH THE UTILITY COMPANIES AFFECTED AT LEAST 24 HOURS PRIOR TO THE DISRUPTION. THE CONTRACTOR SHALL REPAIR DAMAGE TO EXISTING UTILITIES AT THE CONTRACTOR'S EXPENSE.

6. LOCATION OF PROPOSED LANDFILL GAS COLLECTION AND CONTROL SYSTEM COMPONENTS IS APPROXIMATE AND MAY VARY TO MEET FIELD CONDITIONS AT THE TIME OF CONSTRUCTION. ALL HORIZONTAL AND VERTICAL DATUM TO BE VERIFIED PRIOR TO CONSTRUCTION.
7. ALL HEADER AND LATERAL PIPELINES TO BE SDR-17 HDPE WITH SDR-11 HDPE FITTINGS.
8. ALL AIR LINES AND FITTINGS TO BE SDR-9 HDPE.
9. ALL FORCEMAIN AND FITTINGS TO BE SDR-11 HDPE. FORCEMAIN AND FITTINGS INSTALLED OUTSIDE THE LIMITS OF WASTE AND IN THE FINAL COVER AREAS TO HAVE SDR-17 HDPE CONTAINMENT.
10. NO HARD ELBOWS (45° OR 90°) OR TEE FITTINGS TO BE USED ON ANY FORCEMAIN PIPING OR TIE-INS. MOLDED SWEEPING ELBOWS (45° OR 90°), MOLDED WYES AND FIELD BENDS TO BE USED FOR ALL SINGLE PIPE FORCEMAIN. SHOP FABRICATED DUAL CONTAINED SWEEP ELBOWS (45°) AND SHOP FABRICATED DUAL CONTAINED WYES TO BE USED FOR ALL DUAL PIPE FORCEMAIN. NO HARD ELBOWS (45° OR 90°), NO SWEEP 90° ELBOWS, OR TEE FITTINGS TO BE USED IN ANY DUAL PIPE FORCEMAIN.
11. CONTRACTOR TO SURVEY AND STAKE PIPING ALIGNMENTS WITH GRADES AND OBTAIN APPROVAL FROM ENGINEER AND OWNER PRIOR TO PROCEEDING.
12. THE CONTRACTOR SHALL LAY OUT THE PIPE TO CONFORM TO FIELD CONDITIONS. PROVIDE 48" MINIMUM COVER AND 5% MINIMUM SLOPE CROSSING BELOW PERIMETER AND MAIN HAUL ROADS. PROVIDE MINIMUM PIPE DRAINAGE SLOPES OF 3% WITHIN WASTE LIMIT AND 1% OUTSIDE OF WASTE LIMIT. CONTRACTOR RESPONSIBLE FOR CUT (12" MAX, UNLESS OTHERWISE NOTED PER PLAN) AND FILL BENEATH PIPE TO ENSURE PROPER DRAINAGE, AS APPROVED BY THE OWNER/ENGINEER.
13. FEATURES, CONTOURS, AND ELEVATIONS OF THESE BASE MAPS ARE APPROXIMATE INDICATIONS OF CURRENT AND FUTURE CONDITIONS. CONTRACTOR SHALL VERIFY THE ACTUAL LOCATIONS OF THESE ELEMENTS PRIOR TO, AND DURING CONSTRUCTION, AND SHALL FINALIZE THE GAS SYSTEM LOCATIONS TO ACCOMMODATE FINAL FIELD CONDITIONS, AS APPROVED BY THE OWNER/ENGINEER.
14. ALL CONNECTIONS TO EXISTING PIPING SHALL BE CONFIRMED BY THE CONTRACTOR. SOME CONNECTIONS MAY REQUIRE EXCAVATION.
15. ALL PIPE PRESSURE TESTING TO BE PERFORMED WITHIN REPUBLIC GUIDELINES.
16. WORK SHALL NOT VARY FROM DESIGN WITHOUT APPROVAL OF THE OWNER/ENGINEER.
17. CONTRACTOR TO REMOVE AND REUSE EXISTING PIPING AND FITTINGS WHERE APPLICABLE. CAP ALL ABANDONED PIPE. IF ABANDONED PIPE IS HDPE, USE FUSED ON HDPE CAP. IF ABANDONED PIPE IS PVC, USE PVC SCH 40 CAP SECURED WITH SET SCREWS AT 90° AND SOLVENT WELD AS NECESSARY.
18. CONTRACTOR TO USE REDUCER FITTINGS AS NECESSARY.
19. ALL PROPOSED ITEMS SHOULD BE INSPECTED IMMEDIATELY UPON ARRIVAL ON SITE. OWNER SHOULD BE PROVIDED WITH LIST OF REPAIRS, COSTS, SCHEDULES WITHIN 3 DAYS OF MATERIALS ARRIVING ON SITE.
20. REMOVE ALL PUMP COMPONENTS AND VALVES FROM SUMP CS-A AND ABANDON IN PLACE.

NOTES:

1. EXISTING CONTOURS FROM TOPOGRAPHIC SURVEY PROVIDED BY WEAVER CONSULTANTS GROUP. DATE OF SURVEY 11/10/2023.
2. 2023 PHASE 1, PHASE 3, AND CELL 5 GCCS COMPONENTS BASED ON PROPOSED LOCATIONS. ASBUILTS TO BE UPDATED UPON COMPLETION OF RECORD DRAWINGS.
3. 2023 PHASE 2 GCCS AS-BUILT SURVEY PROVIDED BY LAKEWOOD SURVEYING, LLC. IN DRAWING TITLED 'GAS SYSTEM AS-BUILTS 2023 PHASE 2 (ARCHAEA ENERGY)' DATED 09/28/2023.
4. 2022 GCCS AS-BUILT SURVEY PROVIDED BY LAKEWOOD SURVEYING, LLC. IN DRAWING TITLED 'GAS SYSTEM 2022' DATED 09/29/2022.
5. 2021 GCCS AS-BUILT SURVEYS PROVIDED BY LAKEWOOD SURVEYING, LLC. IN DRAWINGS TITLED 'GAS SYSTEM AS-BUILTS - 2021' DATED 06/28/2022.
3. LOCATION OF PROPOSED LANDFILL GAS COLLECTION AND CONTROL SYSTEM COMPONENTS IS APPROXIMATE AND MAY VARY TO MEET FIELD CONDITIONS AT THE TIME OF CONSTRUCTION. ALL HORIZONTAL AND VERTICAL DATUM TO BE VERIFIED PRIOR TO CONSTRUCTION.
4. ALL HEADER AND LATERAL PIPELINES TO BE SDR-17 HDPE WITH SDR-11 HDPE FITTINGS.
5. ALL AIR LINES AND FITTINGS TO BE SDR-9 HDPE.
6. ALL FORCEMAIN AND FITTINGS TO BE SDR-11 HDPE. FORCEMAIN AND FITTINGS INSTALLED OUTSIDE THE LIMITS OF WASTE AND IN THE FINAL COVER AREAS TO HAVE SDR-17 HDPE CONTAINMENT.
7. NO HARD ELBOWS (45° OR 90°) OR TEE FITTINGS TO BE USED ON ANY FORCEMAIN PIPING OR TIE-INS. MOLDED SWEEPING ELBOWS (45° OR 90°), MOLDED WYES AND FIELD BENDS TO BE USED FOR ALL SINGLE PIPE FORCEMAIN. SHOP FABRICATED DUAL CONTAINED SWEEP ELBOWS (45°) AND SHOP FABRICATED DUAL CONTAINED WYES TO BE USED FOR ALL DUAL PIPE FORCEMAIN. NO HARD ELBOWS (45° OR 90°), NO SWEEP 90° ELBOWS, OR TEE FITTINGS TO BE USED IN ANY DUAL PIPE FORCEMAIN.
8. CONTRACTOR TO SURVEY AND STAKE PIPING ALIGNMENTS WITH GRADES AND OBTAIN APPROVAL FROM ENGINEER AND OWNER PRIOR TO PROCEEDING.
9. THE CONTRACTOR SHALL LAY OUT THE PIPE TO CONFORM TO FIELD CONDITIONS. PROVIDE 48" MINIMUM COVER AND 5% MINIMUM SLOPE CROSSING BELOW PERIMETER AND MAIN HAUL ROADS. PROVIDE MINIMUM PIPE DRAINAGE SLOPES OF 3% WITHIN WASTE LIMIT AND 1% OUTSIDE OF WASTE LIMIT. CONTRACTOR RESPONSIBLE FOR CUT (12" MAX, UNLESS OTHERWISE NOTED PER PLAN) AND FILL BENEATH PIPE TO ENSURE PROPER DRAINAGE, AS APPROVED BY THE OWNER/ENGINEER.
10. FEATURES, CONTOURS, AND ELEVATIONS OF THESE BASE MAPS ARE APPROXIMATE INDICATIONS OF CURRENT AND FUTURE CONDITIONS. CONTRACTOR SHALL VERIFY THE ACTUAL LOCATIONS OF THESE ELEMENTS PRIOR TO, AND DURING CONSTRUCTION, AND SHALL FINALIZE THE GAS SYSTEM LOCATIONS TO ACCOMMODATE FINAL FIELD CONDITIONS, AS APPROVED BY THE OWNER/ENGINEER.
11. ALL CONNECTIONS TO EXISTING PIPING SHALL BE CONFIRMED BY THE CONTRACTOR. SOME CONNECTIONS MAY REQUIRE EXCAVATION.
12. ALL PIPE PRESSURE TESTING TO BE PERFORMED WITHIN REPUBLIC GUIDELINES.
13. WORK SHALL NOT VARY FROM DESIGN WITHOUT APPROVAL OF THE OWNER/ENGINEER.
14. CONTRACTOR TO REMOVE AND REUSE EXISTING PIPING AND FITTINGS WHERE APPLICABLE. CAP ALL ABANDONED PIPE. IF ABANDONED PIPE IS HDPE, USE FUSED ON HDPE CAP. IF ABANDONED PIPE IS PVC, USE PVC SCH 40 CAP SECURED WITH SET SCREWS AT 90° AND SOLVENT WELD AS NECESSARY.
15. CONTRACTOR TO USE REDUCER FITTINGS AS NECESSARY.
16. ALL PROPOSED ITEMS SHOULD BE INSPECTED IMMEDIATELY UPON ARRIVAL ON SITE. OWNER SHOULD BE PROVIDED WITH LIST OF REPAIRS, COSTS, SCHEDULES WITHIN 3 DAYS OF MATERIALS ARRIVING ON SITE.

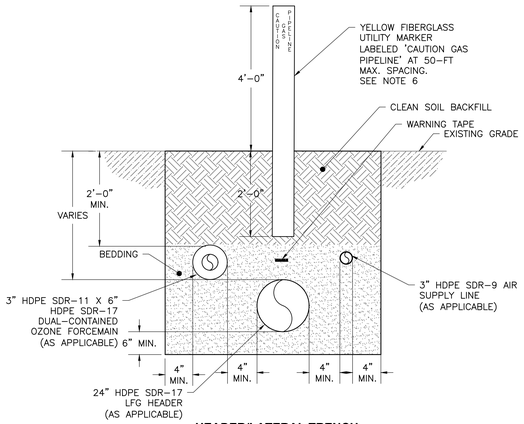
2024 PHASE 1 GCCS CONSTRUCTION
PROPOSED PERIMETER HEADER STAKING PLAN

SHEET NO. 4

PROJECT NO. 209-4241287

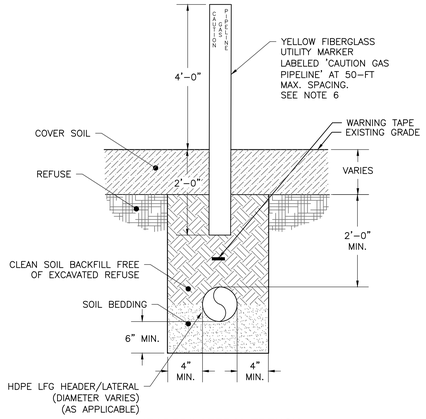


HEADER/LATERAL TRENCH INSTALLED OUTSIDE LIMITS OF WASTE

DETAIL 1 DS1
SCALE: NOT TO SCALE

NOTES:

1. ALL HEADER AND LATERAL PIPELINES TO BE SDR–17 HDPE WITH SDR–11 HDPE FITTINGS. ALL AIRLINES AND FITTINGS TO BE SDR–9 WITH YELLOW STRIPE MARKING. ALL FORCEMAINS AND FITTINGS TO BE SDR–11 WITH BLUE STRIPE MARKING. FORCEMAIN INSTALLED OUTSIDE THE LIMITS OF WASTE OR IN THE FINAL COVER AREAS TO HAVE HDPE SDR–17 DUAL CONTAINMENT.
2. NO HARD ELBOWS (45° OR 90°) OR TEE FITTINGS TO BE USED ON ANY FORCEMAIN PIPING OR TIE–INS. MOLDED SWEEPING ELBOWS (45° OR 90°), MOLDED WYES AND FIELD BENDS TO BE USED FOR ALL SINGLE PIPE FORCEMAIN. SHOP FABRICATED DUAL CONTAINED SWEEP ELBOWS (45°) AND SHOP FABRICATED DUAL CONTAINED WYES TO BE USED FOR ALL DUAL PIPE FORCEMAIN. NO HARD ELBOWS (45° OR 90°), NO SWEEP 90° ELBOWS, OR TEE FITTINGS TO BE USED IN ANY DUAL PIPE FORCEMAIN.
3. WARNING TAPE TO BE MIN. 3" WIDE AND IMPRINTED WITH 'GAS LINE BURIED BELOW'.
4. ALL HEADER AND LATERAL OUTSIDE LIMITS OF WASTE TO BE INSTALLED AT 0.5% MIN. SLOPE UNLESS APPROVED IN ADVANCE BY ENGINEER.
5. THE NUMBER AND TYPES OF PIPES TO BE INSTALLED IN THE TRENCH MAY VARY. REFER TO SITE PLAN.
6. UTILITY MARKER TO BE CARSONITE MODEL CRM3–060–02 OR APPROVED EQUAL.

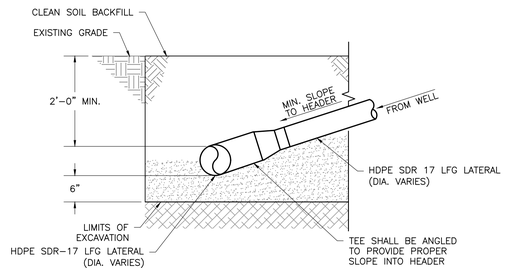


HEADER/LATERAL TRENCH INSTALLED WITHIN LIMITS OF WASTE

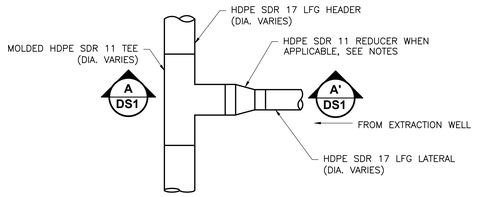
DETAIL 2 DS1
SCALE: NOT TO SCALE

NOTES:

1. ALL HEADER AND LATERAL PIPELINES TO BE SDR–17 HDPE WITH SDR–11 HDPE FITTINGS.
2. WARNING TAPE TO BE MIN. 3" WIDE AND IMPRINTED WITH 'GAS LINE BURIED BELOW'.
3. ALL HEADER AND LATERAL WITHIN LIMITS OF WASTE TO BE INSTALLED AT 3% MIN. SLOPE UNLESS APPROVED IN ADVANCE BY ENGINEER.
4. THE NUMBER AND TYPES OF PIPES TO BE INSTALLED IN THE TRENCH MAY VARY. REFER TO SITE PLAN.
6. UTILITY MARKER TO BE CARSONITE MODEL CRM3–060–02 OR APPROVED EQUAL.



SECTION A–A' DS1
SCALE: NOT TO SCALE

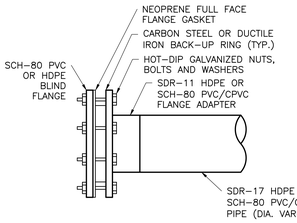


LFG LATERAL TIE–IN WITH TEE

DETAIL 3 DS1
SCALE: NOT TO SCALE

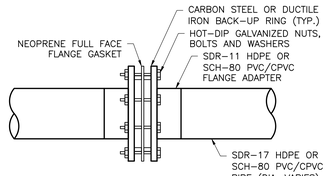
NOTES:

1. MOLDED HDPE TEES SHALL BE INSTALLED FOR ALL TIE–INS OF LATERALS TO HEADER 12"ø AND SMALLER. TEE SHALL BE ANGLED TO MAINTAIN SLOPE INTO THE HEADER AS SHOWN IN SECTION VIEW.
2. CONSECUTIVE SIZE REDUCERS SHALL BE USED TO TRANSITION FROM THE MOLDED TEE TO THE LFG LATERAL. FOR EXAMPLE, TO TRANSITION FROM A 12" TEE, A 12"x10" REDUCER, 10"x8" REDUCER, AND 8"x6" REDUCER SHALL BE INSTALLED.
3. 6" MIN. OF BEDDING SHALL BE PLACED BELOW EACH TEE. THE BEDDING SHALL BE INSTALLED SO IT EXTENDS 3' MIN. IN EACH DIRECTION OF THE TEE. BEDDING SHALL BE SLIGHTLY MOISTENED AND HAND–TAMPED PROVIDING SUPPORT TO ALL POINTS OF THE TEE. CLEAN, GRADED SOIL SHALL BE HAND–TAMPED ABOVE TEE (1' MIN.) BEING CAREFUL TO ELIMINATE VOIDS.



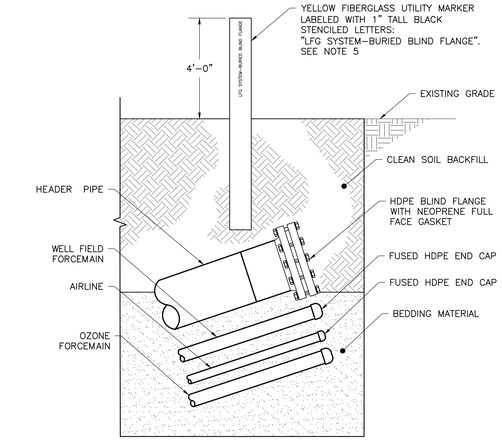
BLIND FLANGE ASSEMBLY

DETAIL 4 DS1
SCALE: NOT TO SCALE



FLANGE CONNECTION

DETAIL 5 DS1
SCALE: NOT TO SCALE

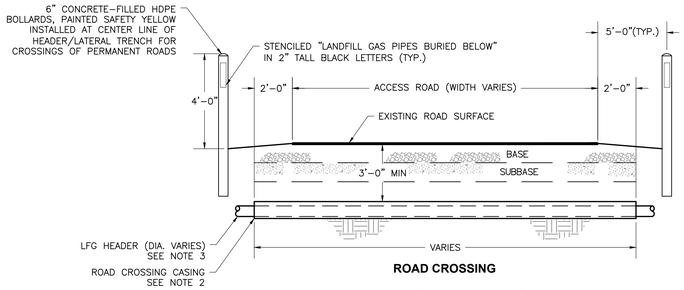


BURIED BLIND FLANGE FOR FUTURE EXPANSION

DETAIL 6 DS1
SCALE: NOT TO SCALE

NOTES:

1. NUTS, BOLTS, AND WASHERS SHALL BE HOT–DIP GALVANIZED. STAINLESS STEEL BOLTS AND NUTS WILL NOT BE PERMITTED.
2. THOROUGHLY COAT ENTIRE SURFACE OF BOLTS, WASHERS, NUTS AND BACKUP RINGS WITH POLYCOAT RUBBERIZED PRIMER, OR EQUAL, AFTER TIGHTENING NUTS. WRAP FLANGE IN PLASTIC WRAP PRIOR TO BACKFILLING.
3. INSTALL FLANGE WITH THE PROPER SLOPE TO PROVIDE FOR FUTURE CONDENSATE DRAINAGE.
4. NUMBER AND TYPE OF PIPES MAY VARY AT DIFFERENT LOCATIONS. REFER TO SITE PLAN.
5. UTILITY MARKER TO BE CARSONITE MODEL CRM3–060–02 OR APPROVED EQUAL.

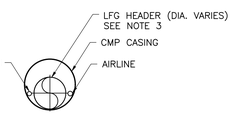


ROAD CROSSING

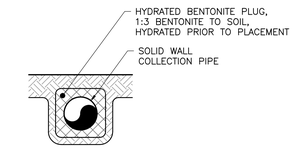
DETAIL 7 DS1
SCALE: NOT TO SCALE

NOTES:

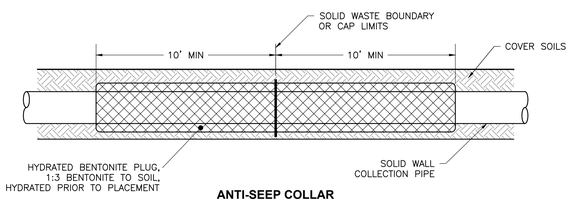
1. ROAD SHALL BE RESTORED TO MATCH ORIGINAL CONDITIONS.
2. CMP CASING A MINIMUM OF 5" GREATER THAN THE CUMULATIVE DIAMETER OF THE PIPES ENCASED.
3. NUMBER AND TYPES OF PIPES ENCASED IN ROAD CROSSING VARIES. SEE SITE PLAN.



END VIEW



END VIEW



ANTI–SEEP COLLAR

DETAIL 8 DS1
SCALE: NOT TO SCALE

NOTES:

1. ANTI–SEEP COLLAR TO BE INSTALLED AT ALL PIPES CROSSING OVER FROM OUTSIDE WASTE LIMITS AND FINAL COVER AREAS TO WITHIN WASTE LIMITS.
2. NUMBER AND TYPE OF PIPES IN TRENCH MAY VARY. ALL PIPES IN THE TRENCH TO BE WITHIN ANTI–SEEP COLLAR.

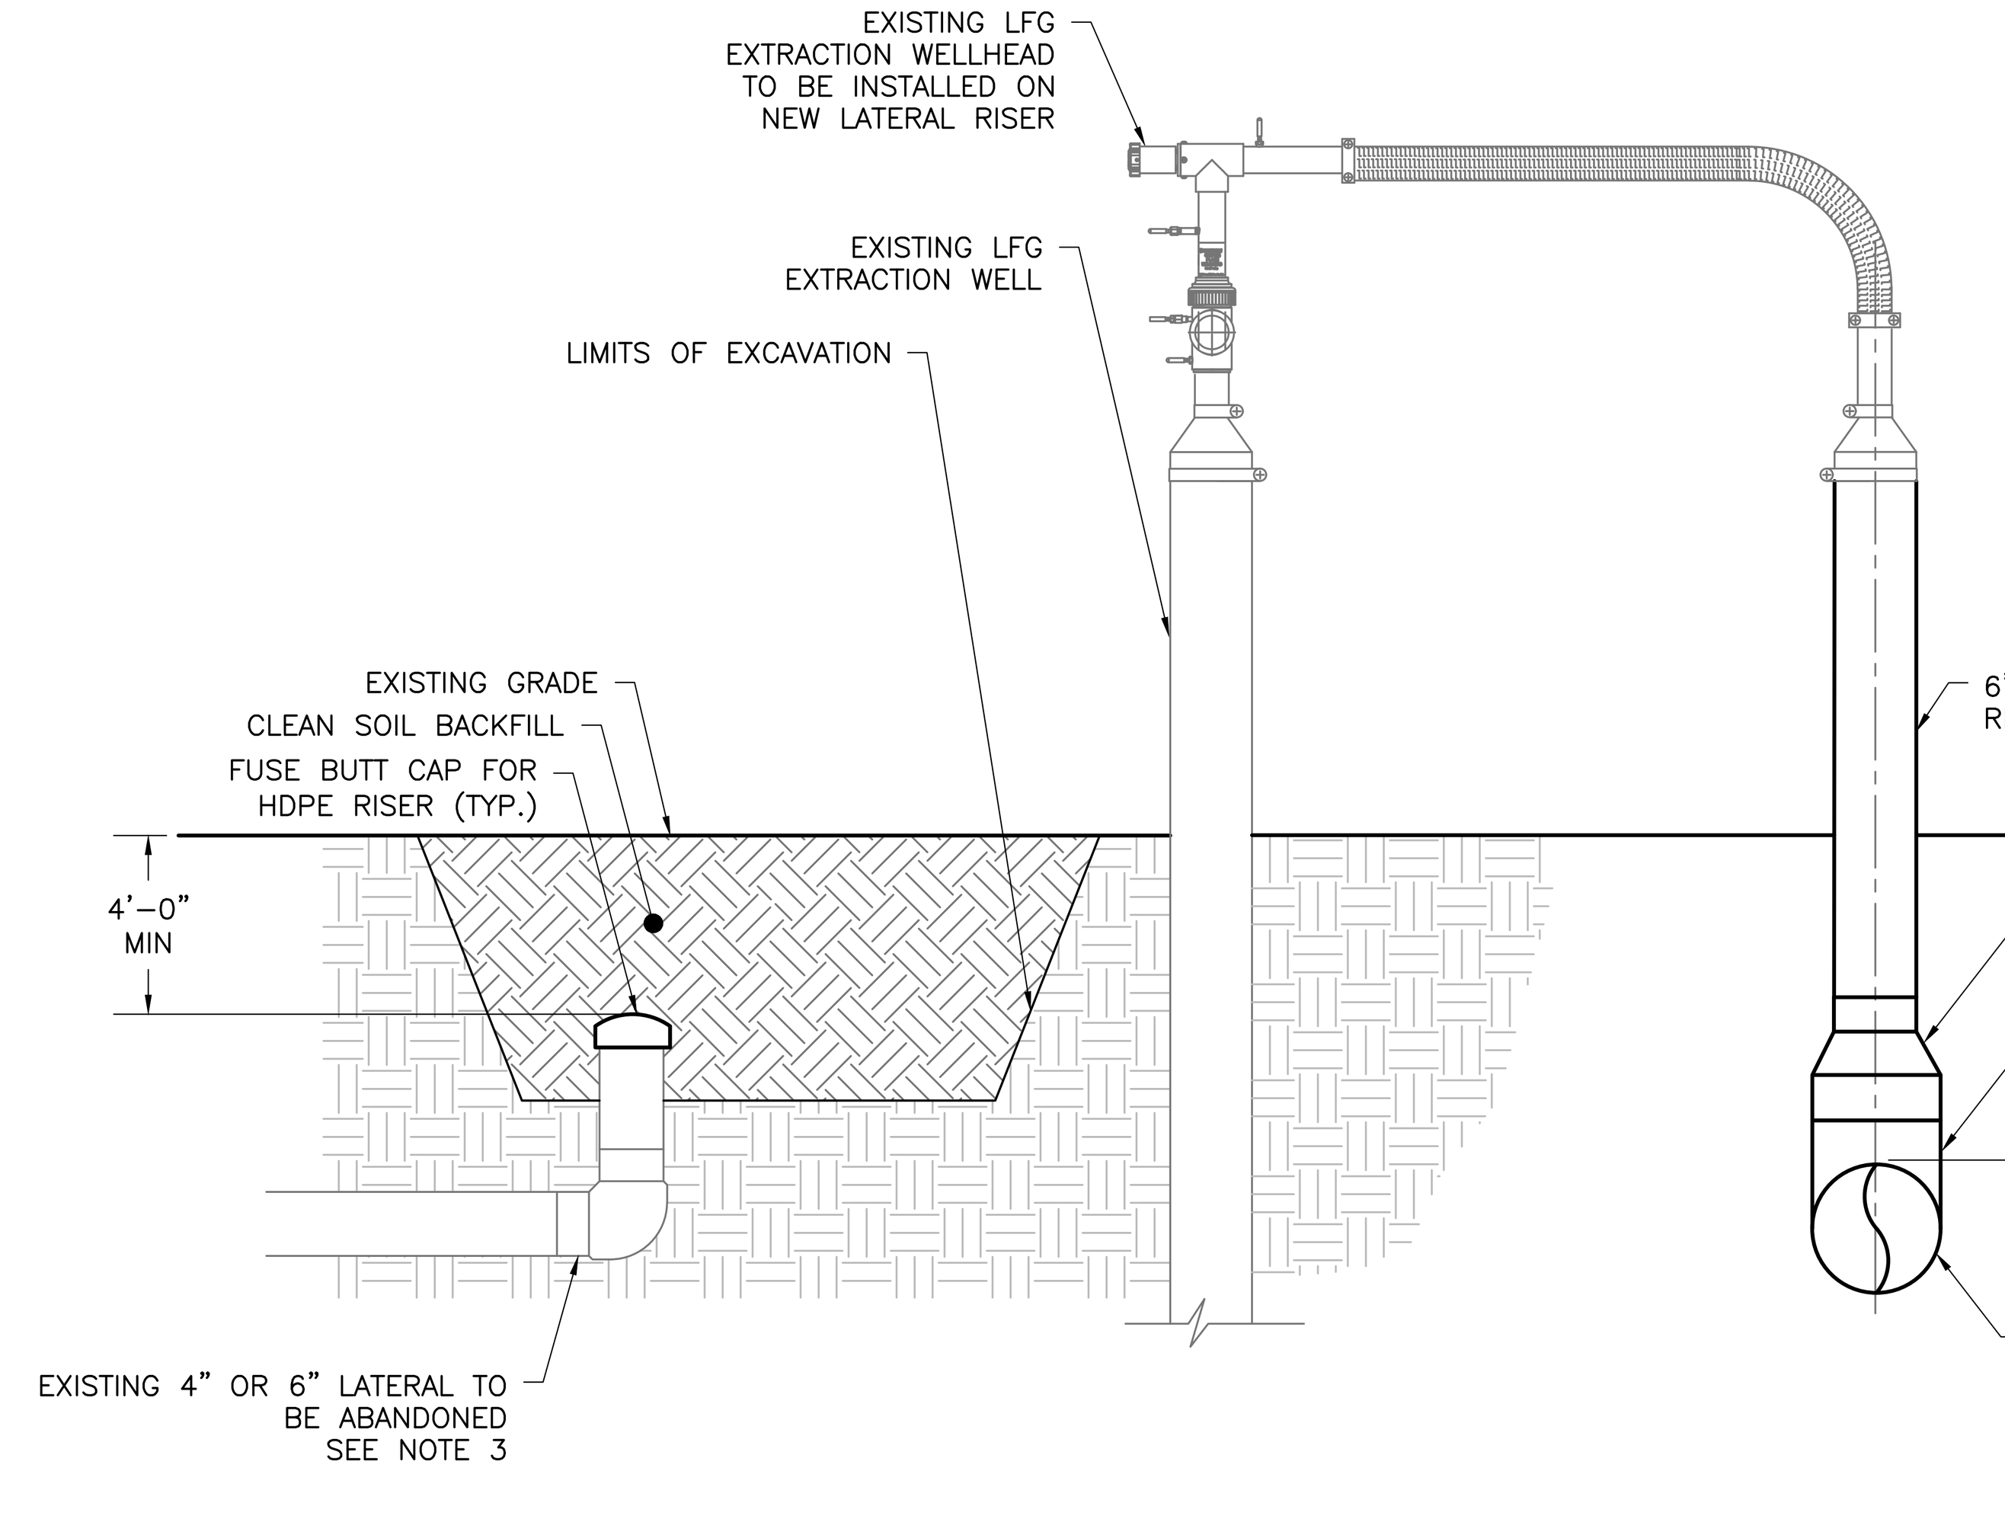
TIE-IN TO EXISTING LATERAL RISER

DETAIL 1/DS2
SCALE: NOT TO SCALE

NOTES:

1. TIE-INS IN FINAL COVER AREAS TO BE COMPLETED ABOVE LINER.

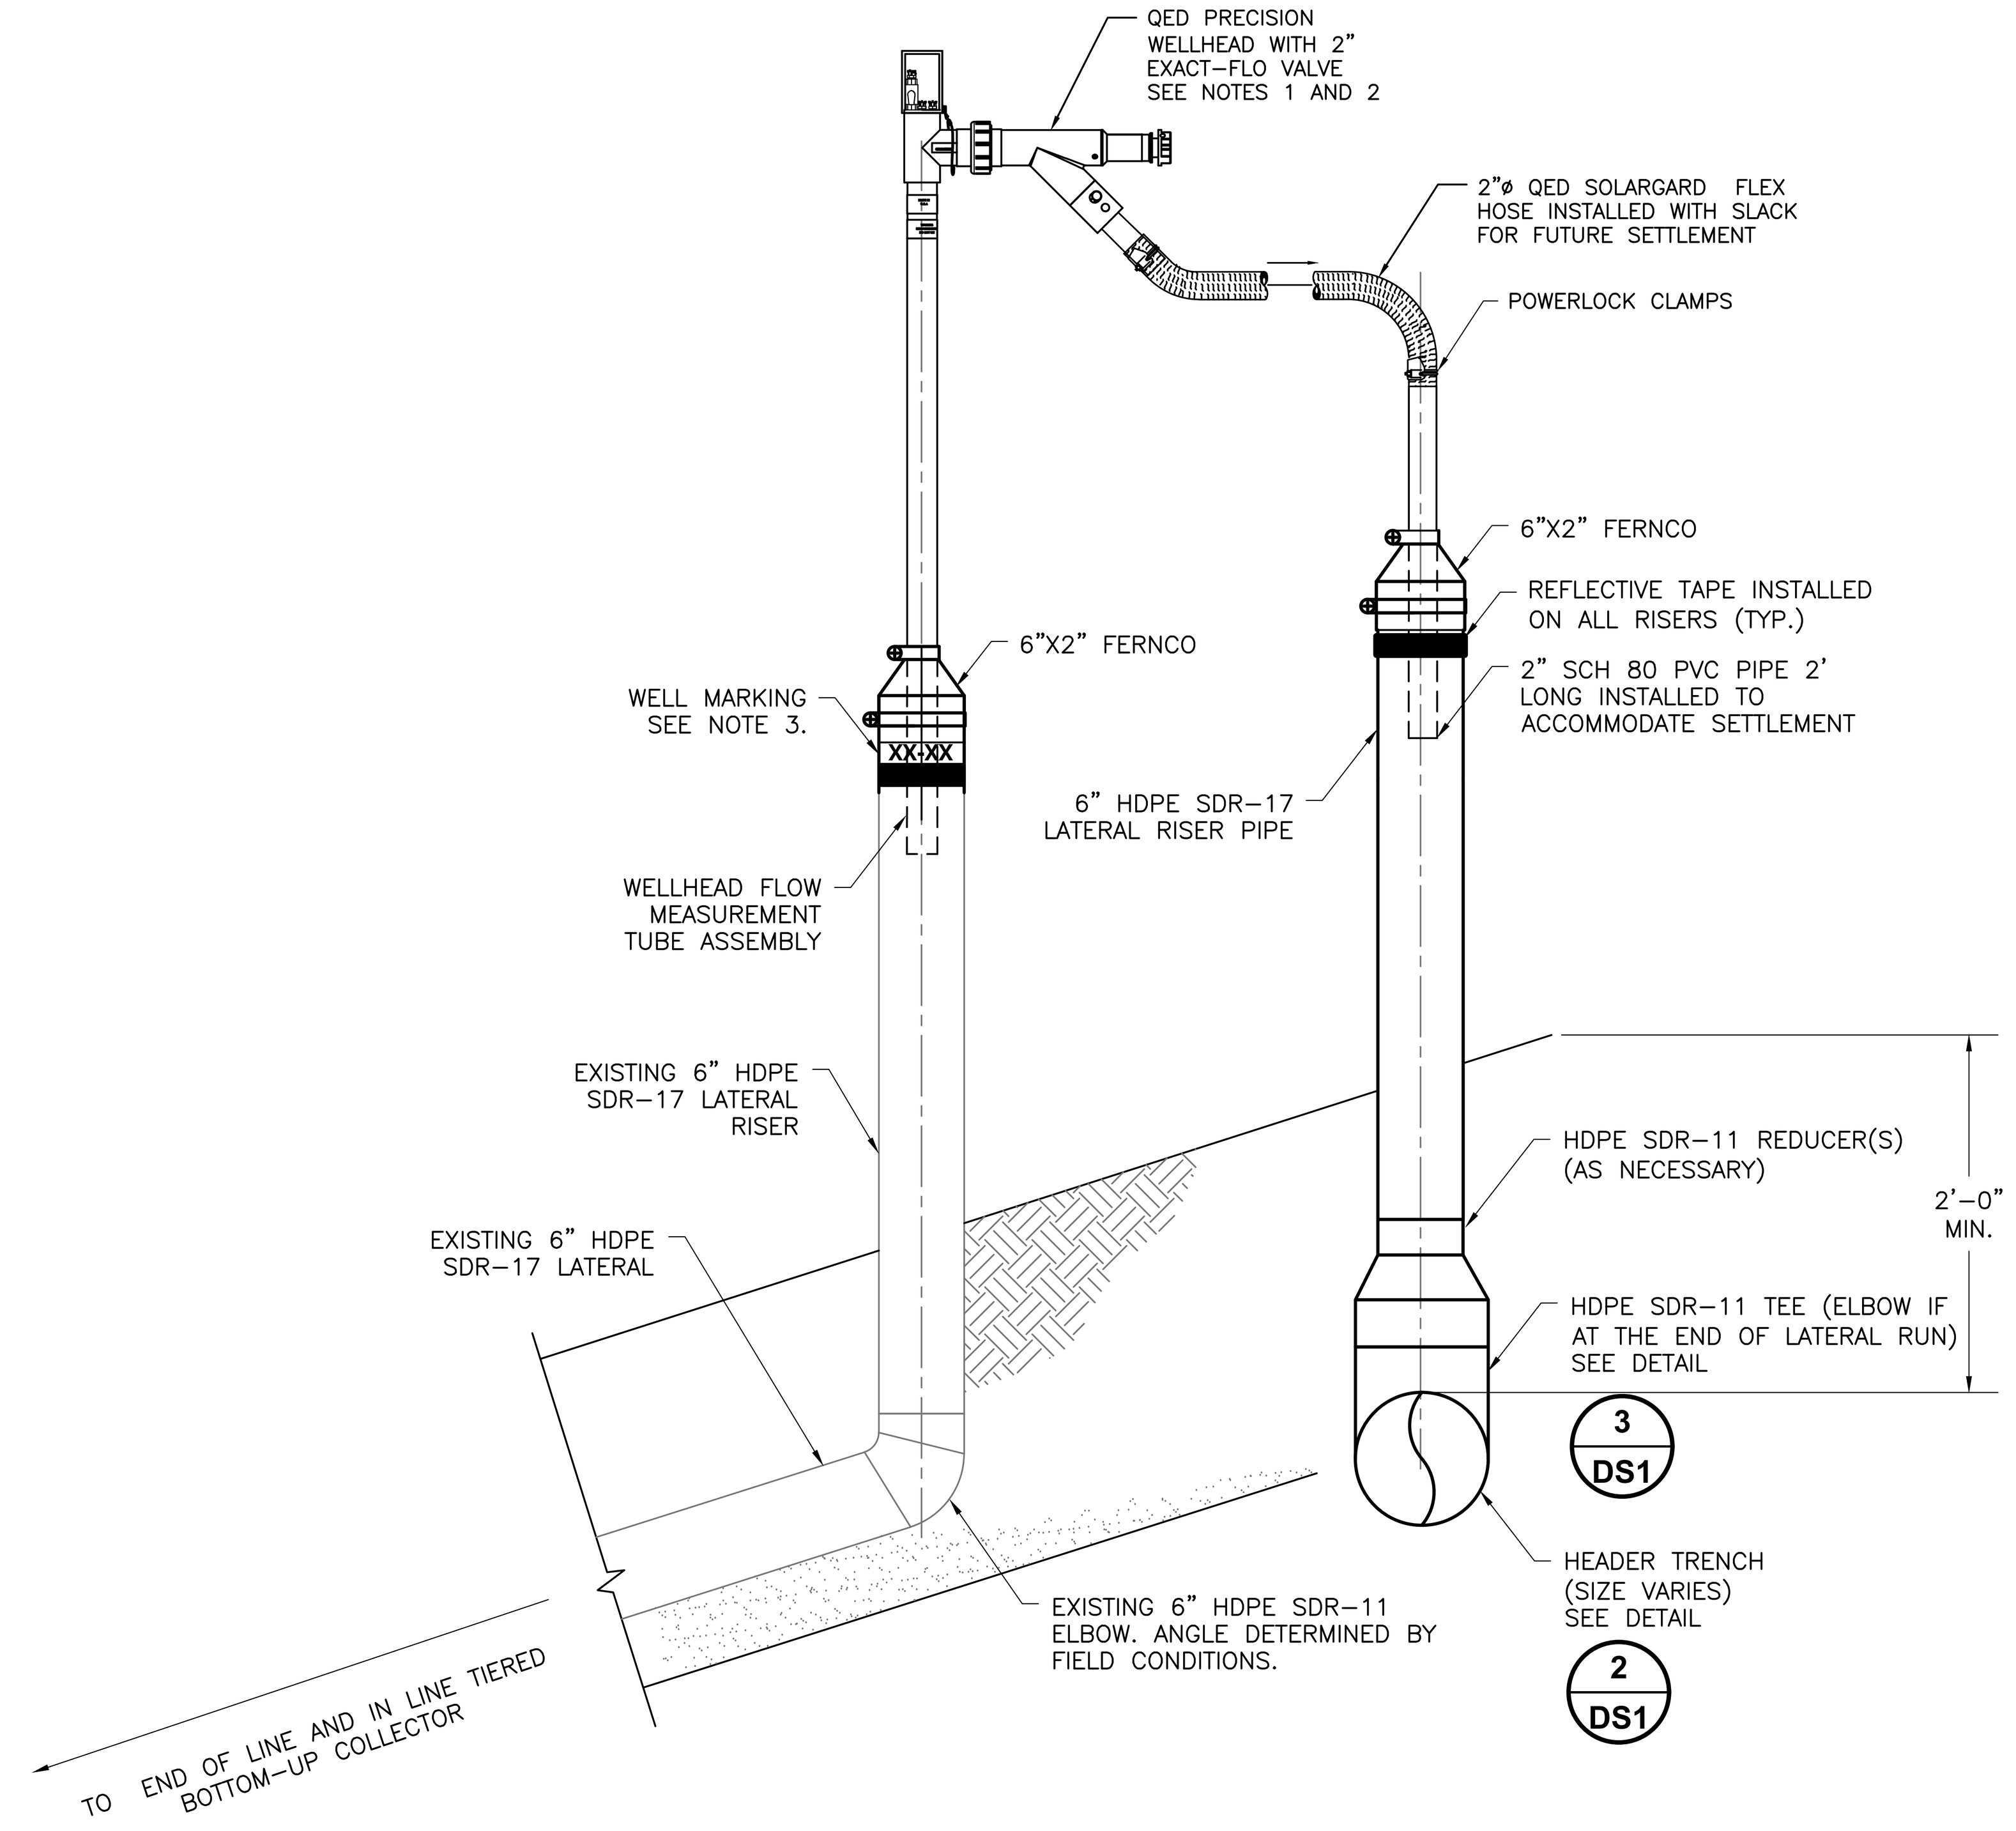


NEW LATERAL RISER TIE-IN TO EXISTING WELL

DETAIL 2/DS2
SCALE: NOT TO SCALE

NOTES:

1. EXISTING WELLHEAD TO BE INSTALLED TO NEW VACUUM RISER.
2. CONTRACTOR TO ABANDON HORIZONTAL PORTION OF EXISTING LATERAL IF PRACTICAL.
3. RISERS IN FINAL COVER AREAS TO BE ABANDONED ABOVE LINER. CUT AND CAP EXISTING RISERS MIN. 3'-6" ABOVE FINAL COVER BOOT EXTENT. REFER TO PENETRATION BOOT IN FINAL COVER DETAIL 3/DS4.

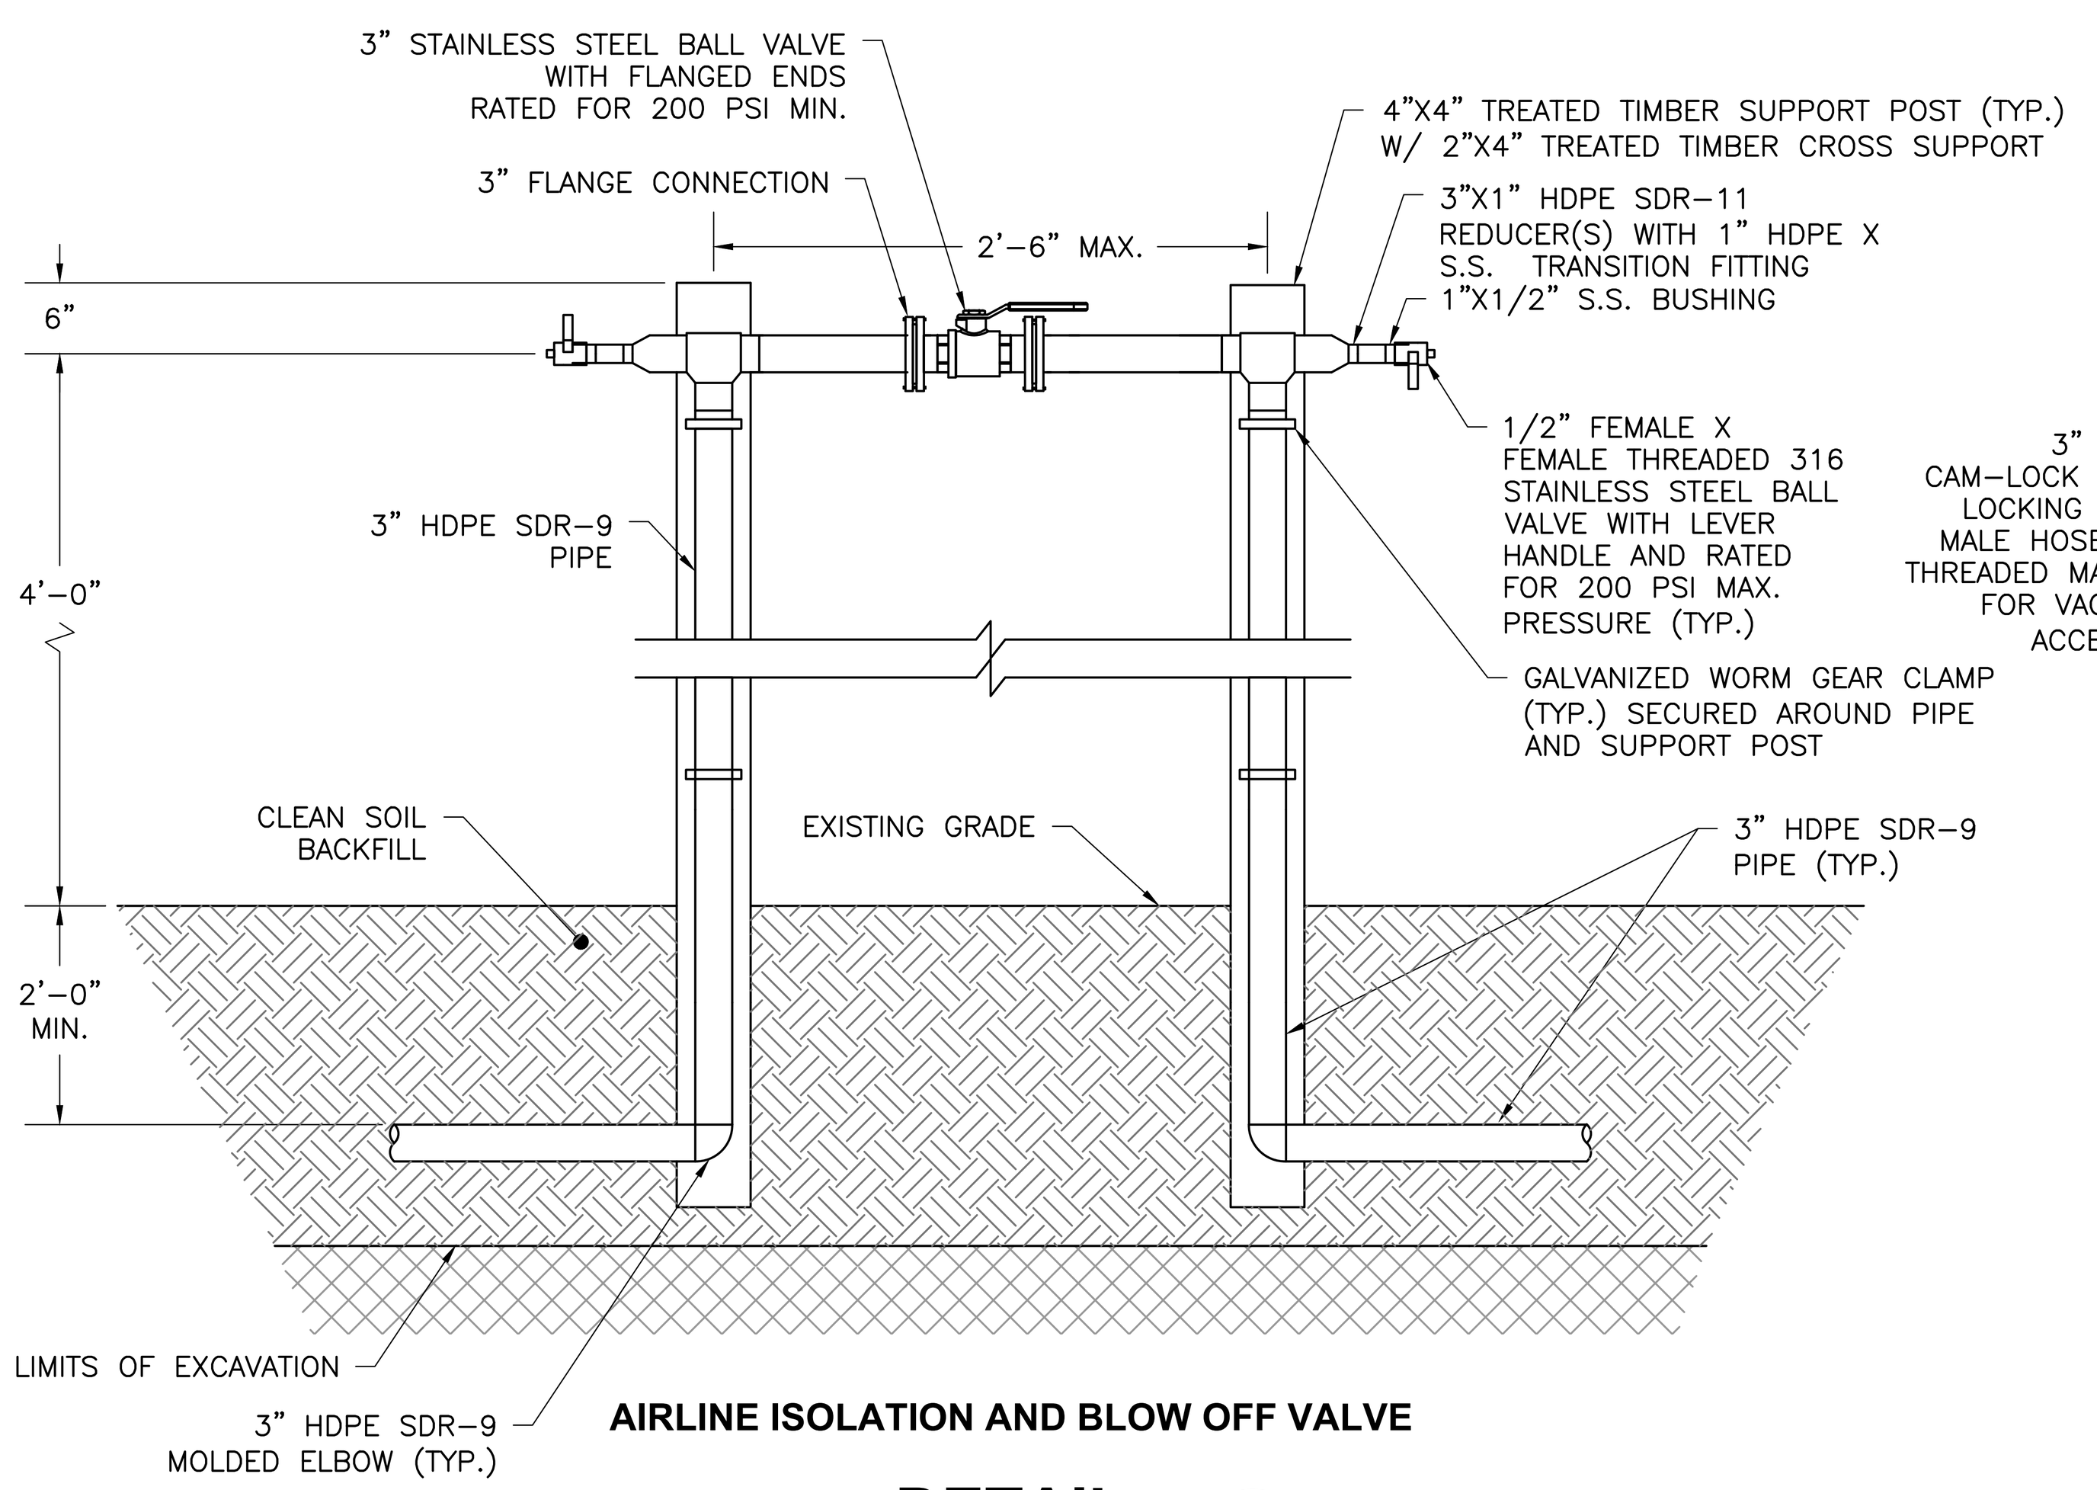


INSTALL REMOTE WELLHEAD ON EXISTING LATERAL RISER

DETAIL 3/DS2
SCALE: NOT TO SCALE

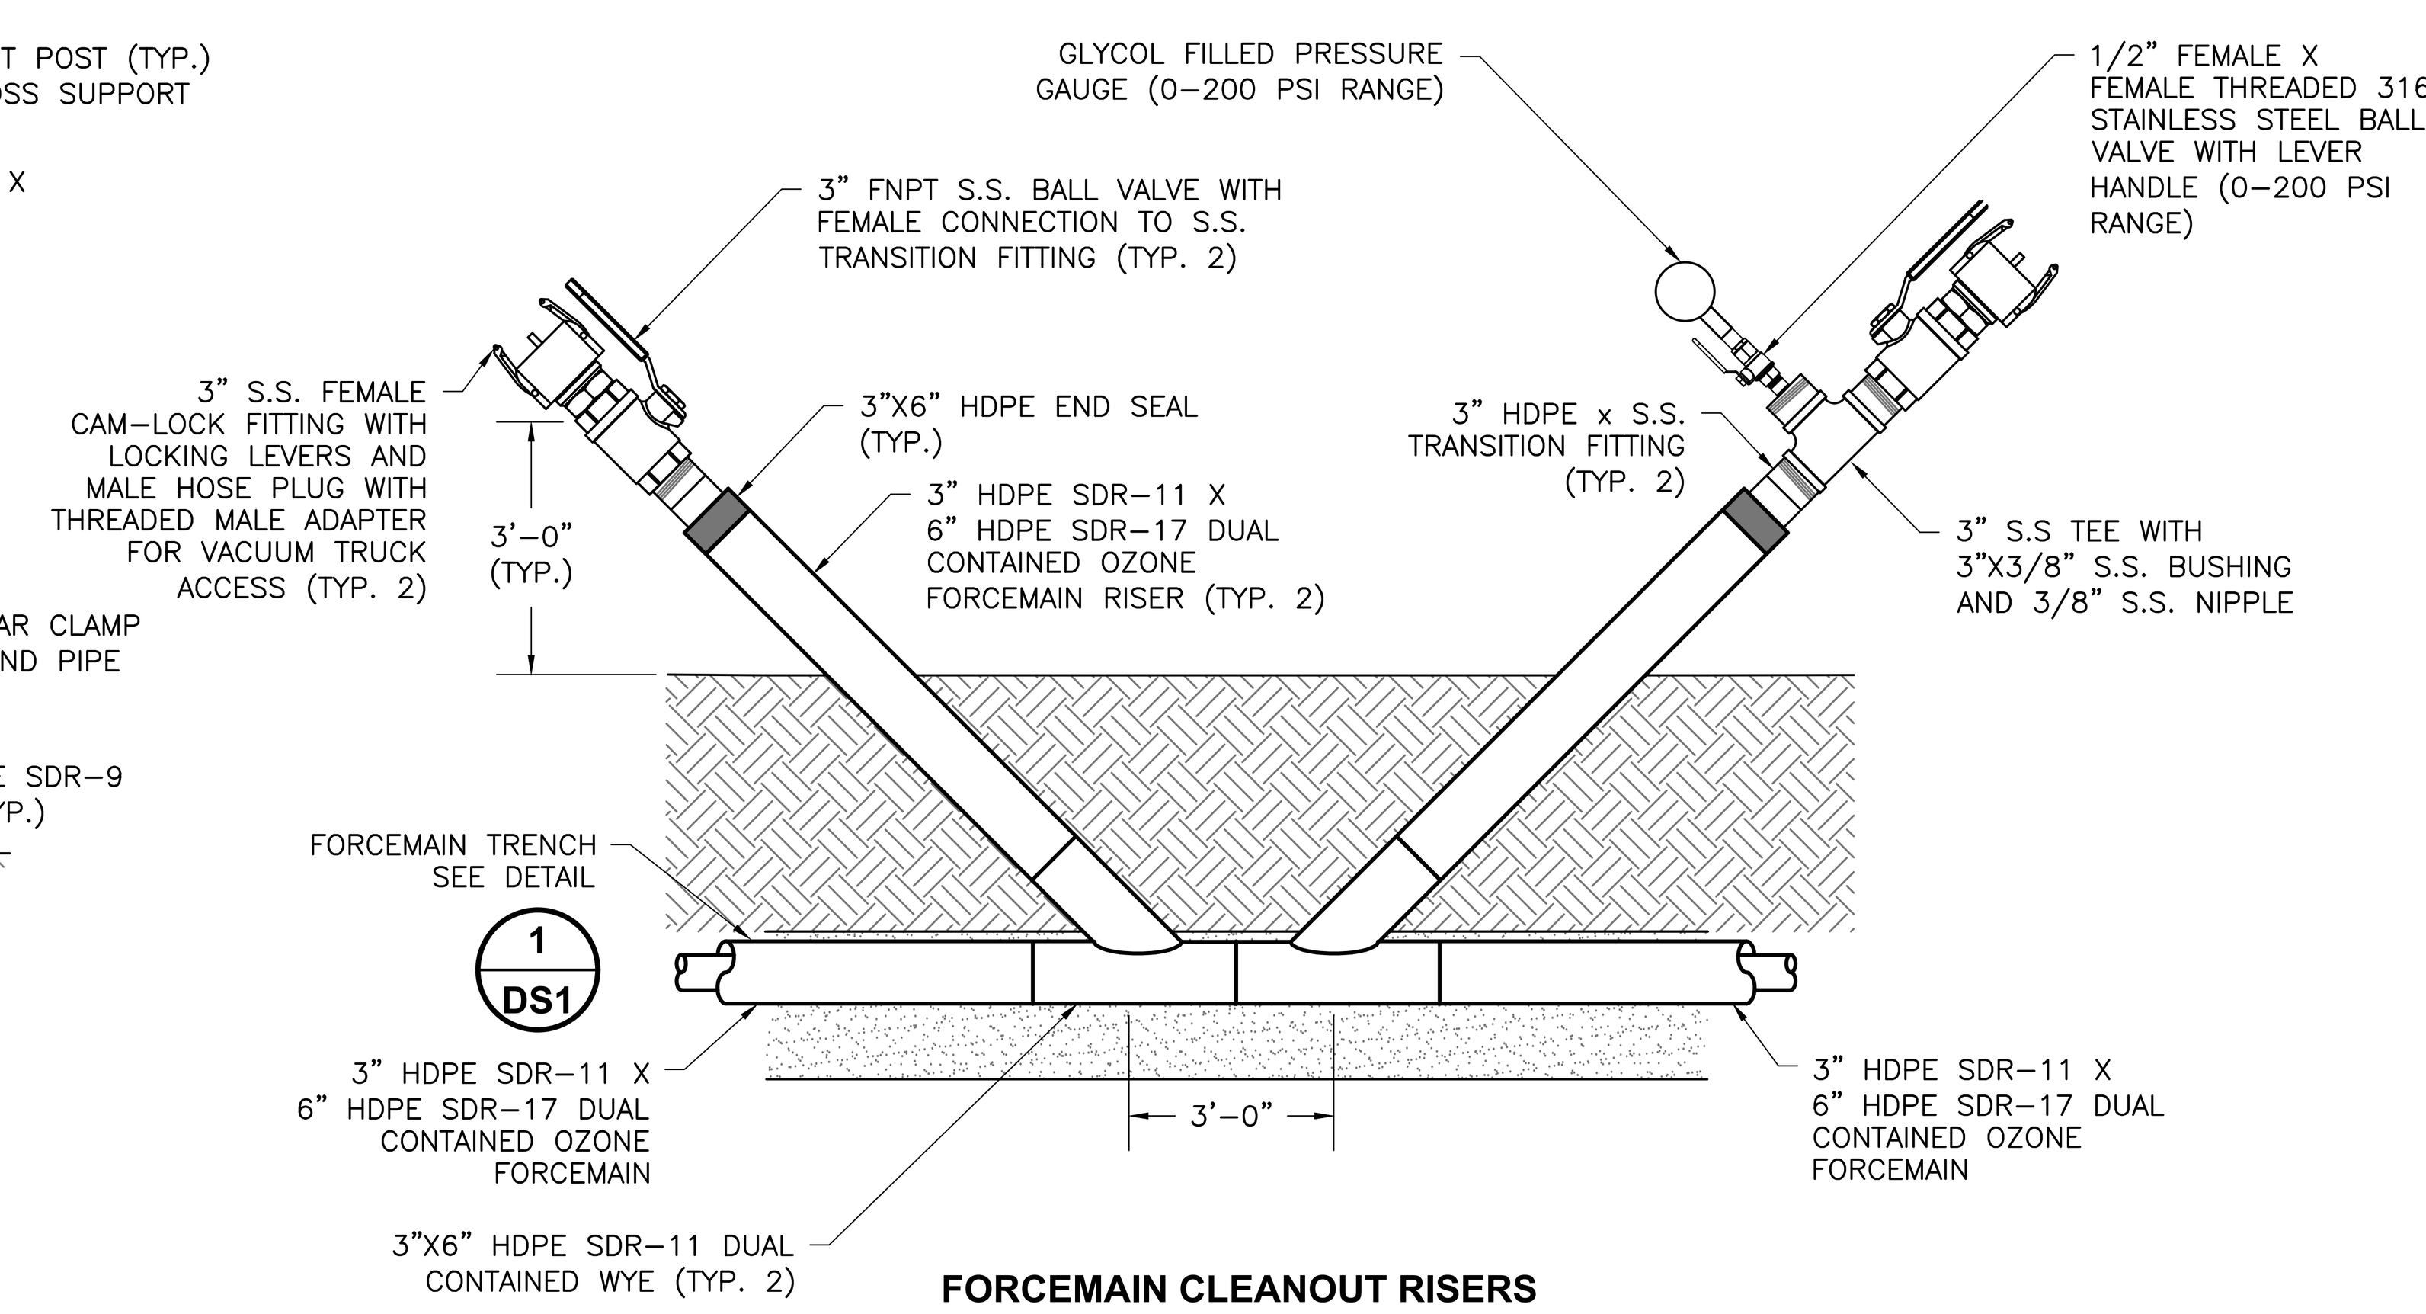
NOTES:

1. WELLHEAD DEPICTED IS QED PRECISION WELLHEAD. CONTRACTOR TO VERIFY OWNER PREFERENCE.
2. WELLHEAD MAY BE SUBSTITUTED WITH AN APPROVED EQUAL PER ENGINEER.
3. EACH WELL TO BE MARKED RISER WITH IDENTIFICATION NUMBER WITH YELLOW OR WHITE PAINT AND 2" TALL STENCILS, OR ADHESIVE LABEL.
4. CONTRACTOR TO ENSURE DRAINAGE OF SURFACE WATER AWAY FROM THE WELLHEAD.
5. LATERAL PIPING TO DRAIN TO THE MAIN HEADER, AWAY FROM THE WELLHEAD, AT A MINIMUM SLOPE OF 3%.
6. FLEX HOSE TO BE INSTALLED WITH EXCESS HOSE TO ALLOW MOVEMENT OF LATERAL BUT CONFIGURED AS NECESSARY TO PREVENT SAG AND WATER ACCUMULATION. ALL INSTALLATIONS TO BE INSPECTED BY ENGINEER PRIOR TO APPROVAL.



AIRLINE ISOLATION AND BLOW OFF VALVE

DETAIL 4/DS2
SCALE: NOT TO SCALE

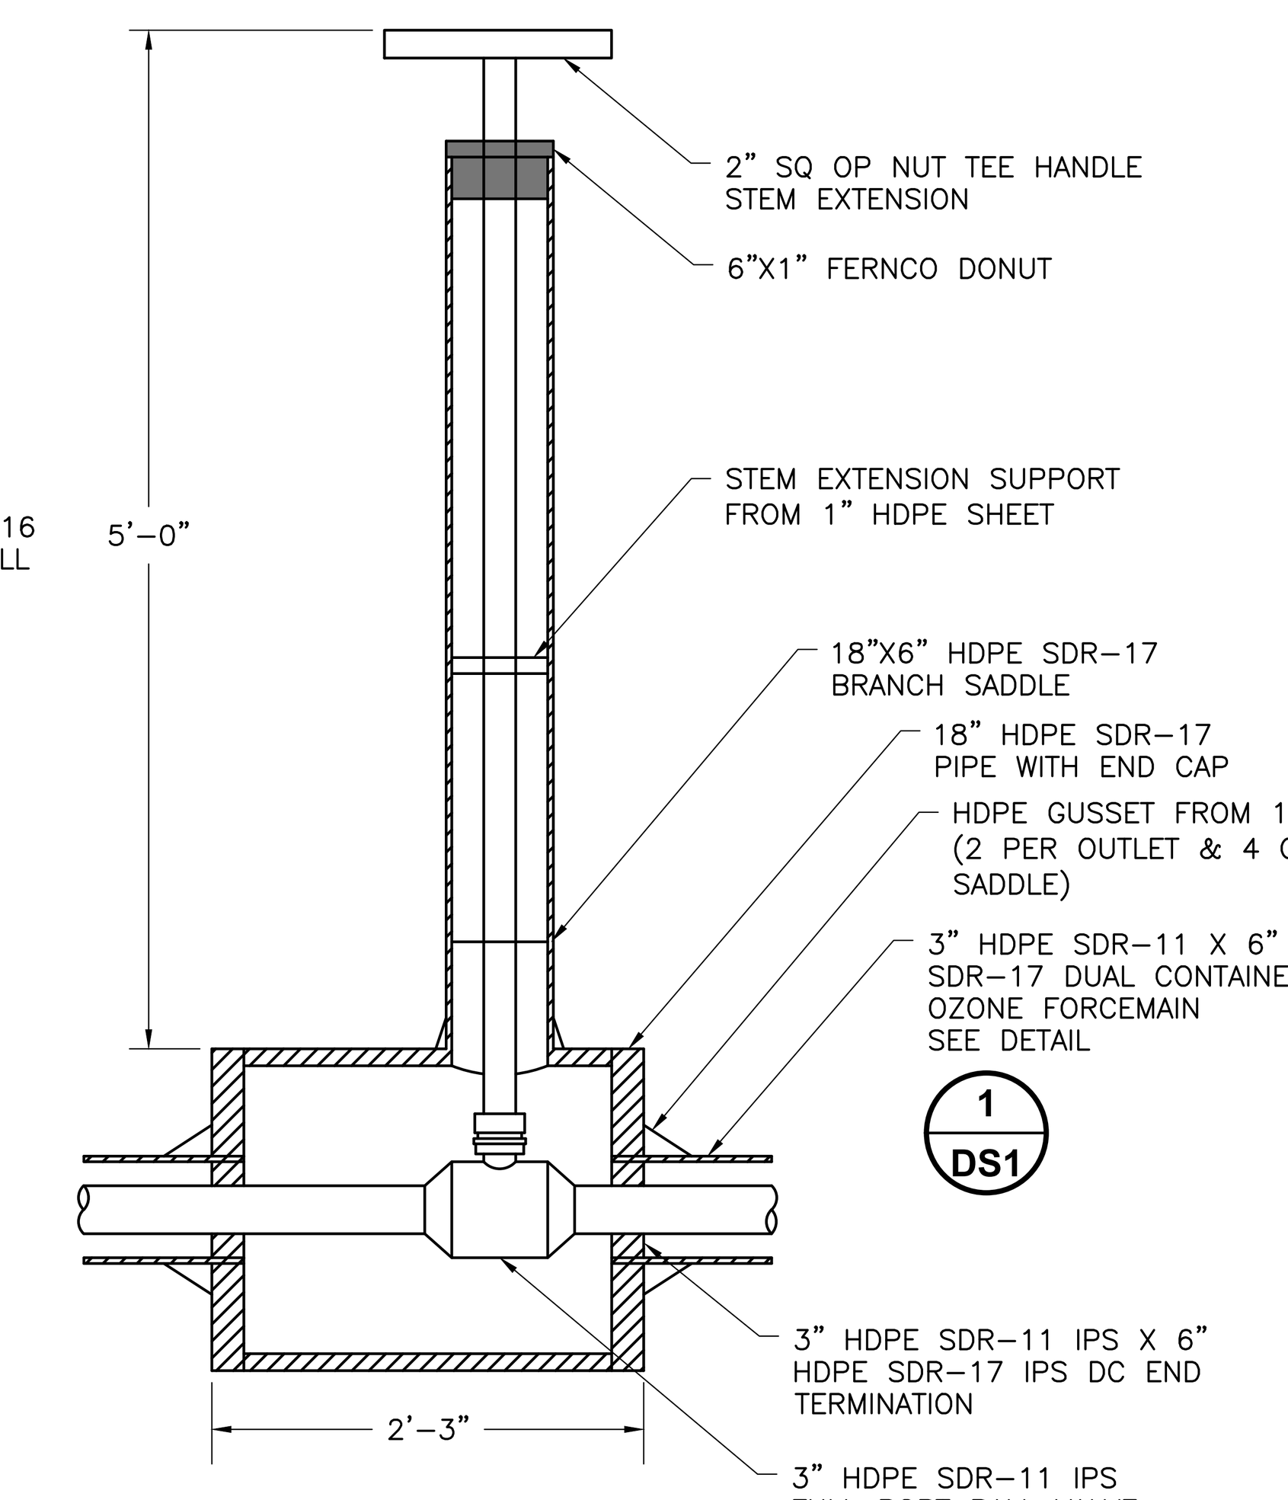


FORCEMAIN CLEANOUT RISERS

DETAIL 5/DS2
SCALE: NOT TO SCALE

NOTES:

1. FORCEMAIN INSTALLED WITHIN LIMITS OF WASTE SHALL HAVE NO HDPE SDR-17 DUAL CONTAINMENT.

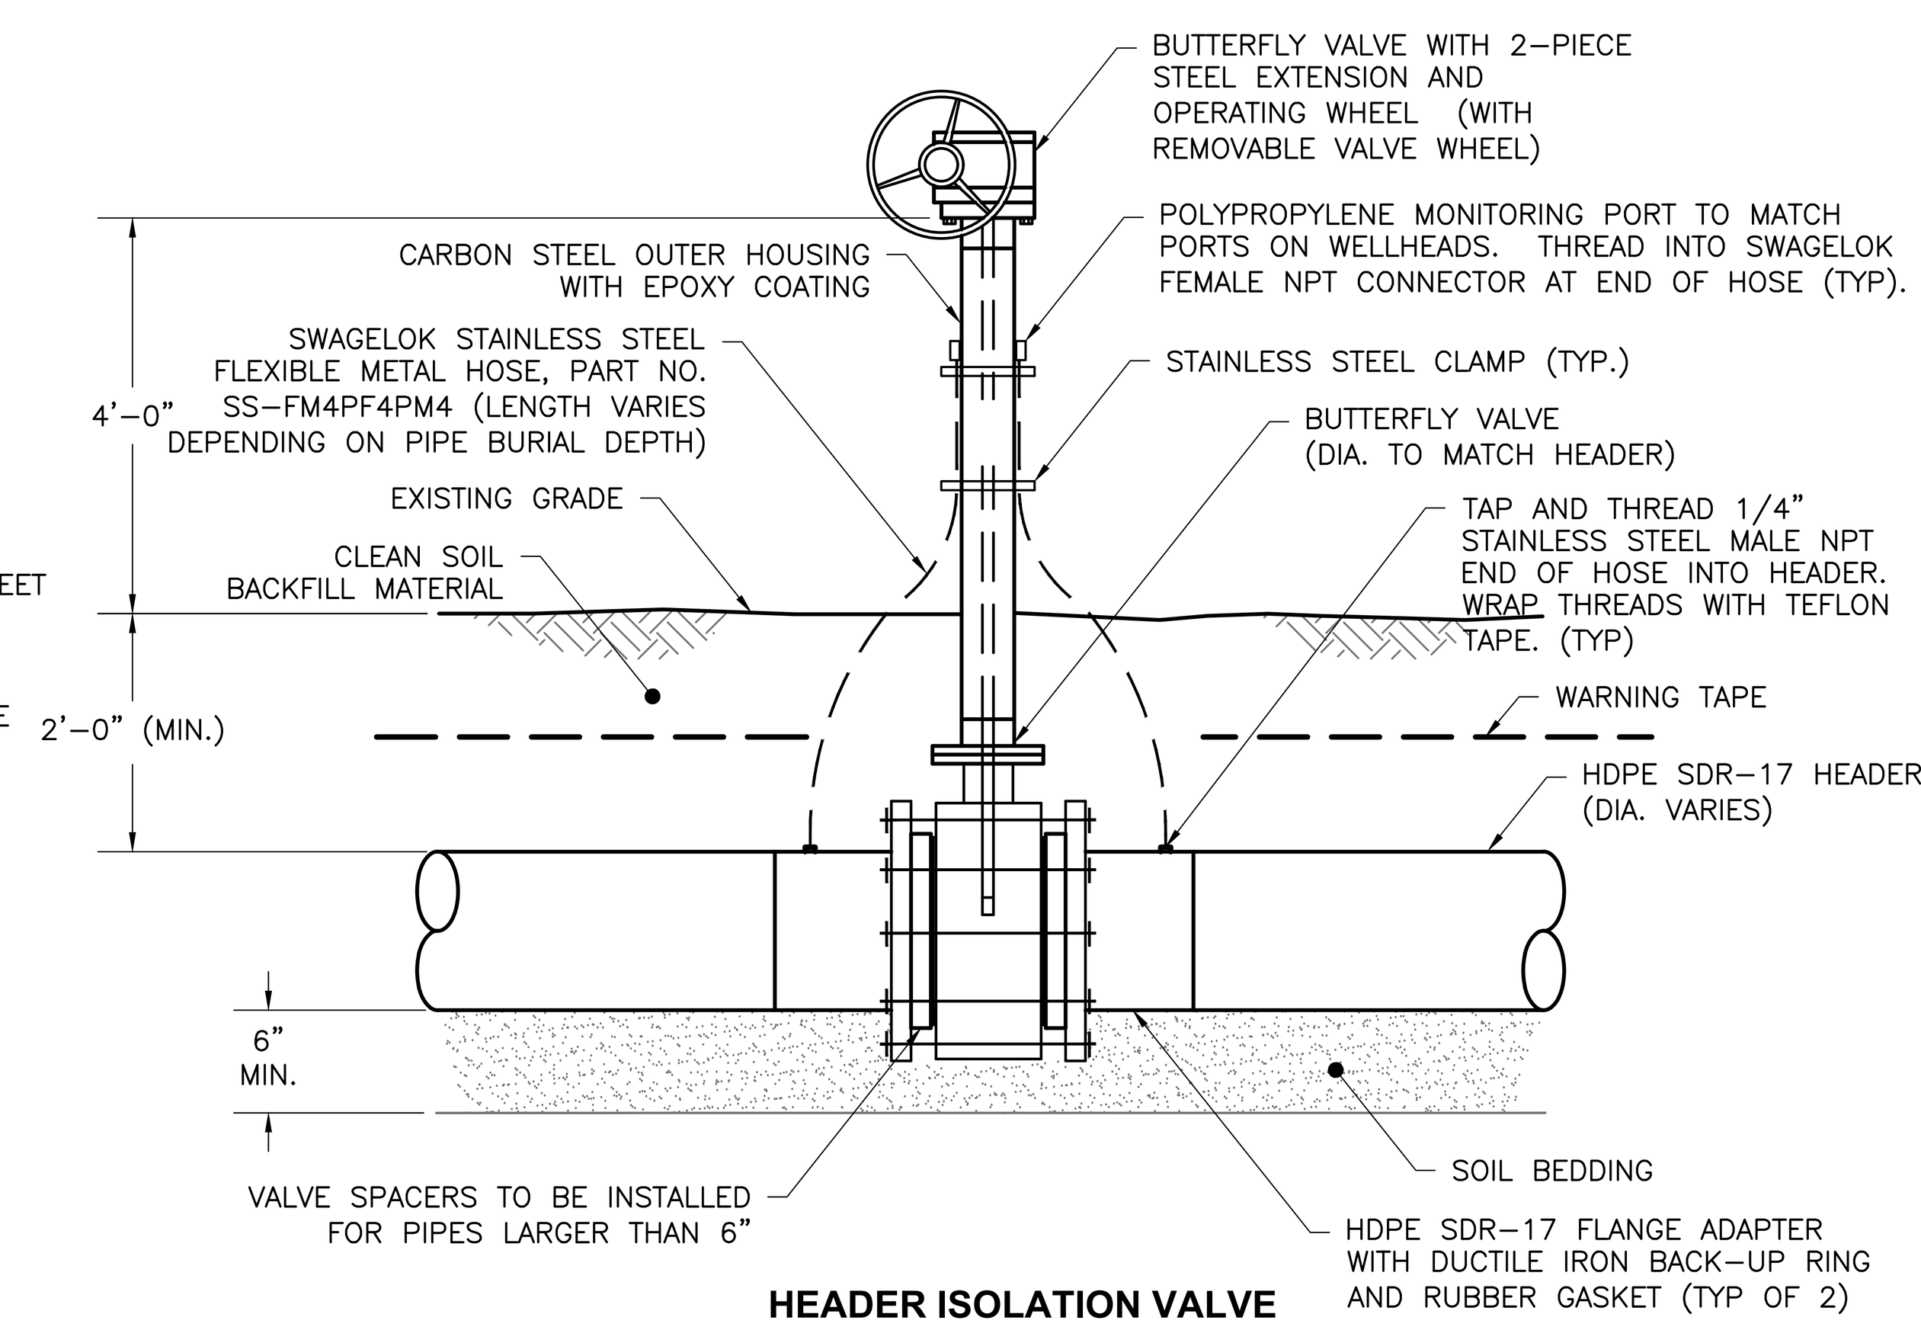


DUAL CONTAINED FORCEMAIN ISOLATION VALVE

DETAIL 6/DS2
SCALE: NOT TO SCALE

NOTES:

1. DUAL CONTAINED FORCEMAIN VALVE SHALL BE INSTALLED ON DUAL CONTAINED FORCEMAINS IN FINAL COVER AREAS, ABOVE FINAL COVER LINER.



HEADER ISOLATION VALVE

DETAIL 7/DS2
SCALE: NOT TO SCALE

NOTES:

1. NUTS, BOLTS, AND WASHERS SHALL BE HOT-DIP GALVANIZED. STAINLESS STEEL BOLTS AND NUTS WILL NOT BE PERMITTED.
2. THOROUGHLY COAT ENTIRE SURFACE OF BOLTS, WASHERS, NUTS AND BACKUP RINGS WITH POLYCOAT RUBBERIZED PRIMER, OR EQUAL, AFTER TIGHTENING BOLTS. COATING SHALL HAVE NO "HOLIDAYS", OR GAPS IN ITS APPLICATION.
3. WRAP FLANGE IN PLASTIC WRAP PRIOR TO BACKFILLING.
