RE: Request for an extension to run Stack Test at Rieth-Riley Construction Co., Inc. Plant #365, 25200 SR-23 South Bend, IN 46614. Permit No: 141-36333-00027

Dear Mr. Perry:

Plant #365 was last tested for stack PM emissions on July 23<sup>rd</sup> of 2015 and is therefore due to be tested again in July of 2020. Rieth-Riley had problems during our testing on 7-14-20 and aborted the test after a single run was completed. We are confident that we have identified and addressed the problem but could not successfully complete required testing on 7-14-20. Weather delays and Covid-related cancellations have impacted production schedules enough to prevent the possibility of completing testing prior to the 7-23-20 anniversary. We are, however, currently set up to do the tests on 8-6-20.

Air Dynamics has been scheduled for testing on 8-6-20. However, just in case there are further delays, Rieth-Riley requests additional time in which to schedule the required testing and anticipates that prior to 10-1-20 we should have sufficient production scheduled to complete the testing.

I look forward to your response and appreciate your understanding. Should you have any questions, please feel free to contact me directly at: (574) 875-5183 ext. 20218, or (574) 532-0032 (cell).

Sincerely,

John Berscheit
