RE: Crossroads Eco Center (FP 73-01)
Asbestos Notification

Dear Mr. Clevenger,

On behalf of the Crossroads Eco Center (Crossroads), I am submitting this letter and enclosure as the notification required pursuant to 40 CFR 61.154(j) that the facility may potentially disturb asbestos-containing material during excavation associated with the site's installation of gas collection system projects located throughout the landfill.

Beginning as early as August 19, 2024, Crossroads plans to excavate waste for header, lateral, air, and force main piping as part of the gas collection and control system expansion. These projects are expected to be completed by October 31, 2024.

During the well and pipe installation activities, asbestos-containing wastes may be encountered. Wastes encountered during the well drilling or pipe installation process will be temporarily stored at the location they were excavated. Excavated waste will be disposed of in the daily active fill area.

As the waste excavated during the drilling and excavation process will likely be wet, potential for visible emission or airborne exposure will be minimal. The facility will cover the temporary stockpile with a tarp and/or clean soils to assure that the waste remains wet or apply water as needed. Waste material will also be covered during transport to the final disposal location. Asbestos-containing material will be disposed of and adequately covered at the active face of the landfill within 24 hours of disturbing the waste.

If you should have any questions or require additional information, please feel free to contact me at Dklene1@wm.com or (317) 695-2542.

Sincerely

A handwritten signature in blue ink, appearing to read 'Dave Klene', is positioned above the typed name.

Dave Klene
Crossroads Site Engineer

Mr. John Clevenger

Notification of Activity

**Excavation or Disturbance of Previously Disposed
Asbestos-Containing Material**

Name of Facility: Crossroads Eco-Center (FP 73-01)

Site Address: 2920 E. US 52

City, State, Zip Code: Morristown, Indiana 46161

Telephone Number: (317) 695-2542

Project Description: Construction of landfill gas system management components. Excavation and disposal of waste.

Reason for Project (why waste is being disturbed): To install landfill gas management system components to more effectively collect landfill gas and control potential odors.

Start Date: Mobilization activities scheduled to begin on or after August 19, 2024

Completion Date: October 31, 2024

Procedure to Control Emissions: Any asbestos-containing materials encountered will be wetted when removed to inhibit dust generation.

Location of Temporary Storage: Not applicable

Location of Final Disposal: All asbestos-containing materials will be properly containerized for disposal on-site in the active area.
