Good morning, David.

Thank you for informing me of the inconsistencies. Appreciate it. We are going to draft an ATSD to address them.

Thank you.
Iryn

Deliberative - Not for Public View per IC 5-14-3-4(b)(6)

Iryn,

Just a heads up that you might want to take a look at the TSD and emissions calculations for this permit, 46805.

The TSD has this on page 60 of 92 says PM, PM10, and PM2.5 emissions are less than 100 tpy, but more than 25 tpy and this is what requires issuance of an MSOP. The numbers in the table and the permit calculations don't bear that out. It appears that all the PM numbers are less than 25 tpy.

However, the CO and VOC numbers appear to have been transposed. According to the emissions calculations, it is the VOC emissions which are approximately 37 tpy and the CO emissions which are 6.89 tpy.

I thought you would want to know.

David
