Toxicity Test*

CONNERSVILLE  
WASTEWATER TREATMENT PLANT

IN0032336

Connersville, Indiana

May 2024

**GLP (Good Laboratory Practices)  
COMPLIANCE STATEMENT**

Project Name: Connersville Wastewater Treatment Plant

Project Date: May 2024

This project has been conducted under GLP standards, as stated in 40 CFR Part 160, with the following exceptions:

*Greg R. Bright*

Quality Assurance Officer  
Date: 5/21/24

*Michael Britton*

Project Director  
Date: 5/21/24

Other Participating Personnel:

Mukang'andu Ng'andwe  
Arizona Fox

Copies of the raw data and final report are maintained in the archives of Biomonitor for five years from the date of completion.

Section 1  
Executive Summary

Biomonitor conducted whole effluent toxicity testing for the Connersville, IN Wastewater Treatment Plant during May 2024. The purpose of the testing was to fulfill the biomonitoring requirement for the NPDES permit.

Three samples were collected May 5-9, 2024. The water flea, *Ceriodaphnia dubia*, and Fathead minnow, *Pimephales promelas*, were used as the test organisms.

A total of six toxicity endpoints were measured. The following results were obtained:

*Ceriodaphnia dubia* test

|                        |                 |                       |
|------------------------|-----------------|-----------------------|
| 48-hr LC <sub>50</sub> | > 100% effluent | TU <sub>a</sub> < 1.0 |
| NOEL for survival      | = 100% effluent | TU <sub>c</sub> = 1.0 |
| NOEL for reproduction  | = 100% effluent | TU <sub>c</sub> = 1.0 |

*Pimephales promelas* test

|                        |                 |                       |
|------------------------|-----------------|-----------------------|
| 48-hr LC <sub>50</sub> | > 100% effluent | TU <sub>a</sub> < 1.0 |
| NOEL for survival      | = 100% effluent | TU <sub>c</sub> = 1.0 |
| NOEL for growth        | = 100% effluent | TU <sub>c</sub> = 1.0 |

The acute toxicity limits in the NPDES permit require the 48 and/or 96-hr LC<sub>50</sub> to be greater than 100% effluent (a TU<sub>a</sub> not to exceed 1.0). The effluent samples passed the acute toxicity limits during this testing period for both species.

The chronic toxicity limits in the NPDES permit require a NOEL (No Observable Effect Level) greater than 58.8% effluent (a TU<sub>c</sub> not to exceed 1.7). According to the NPDES permit, there was not a “Demonstration of Toxicity” during this sampling period.

## SAMPLE SUMMARY AND CHAIN OF CUSTODY

CLIENT NAME: Connersville WWTP

PURPOSE OF SAMPLE: Whole Effluent Toxicity

SAMPLE IDENTIFICATION: Connersville - 1                      Monday                      May 2024

DESCRIPTION: Outfall

DATE SAMPLE COLLECTED: Start Date 5-5-24 Start Time 12:00 AM  
End Date ~~5-6-24~~ 5-5-24 End Time ~~11:59~~ 11:00 ~~am~~ pm

NAME OF PERSON COLLECTING SAMPLE: Marc Frank

SAMPLE VOLUME: 8 Liters

NUMBER OF CONTAINERS: Two, HDPE

SAMPLE STORAGE: Refrigerated/iced

PRESERVATIVES: none

Relinquished by: Marc Frank

Date: 5-6-24 Time: 10:20 a

Received by: GGF

Date: 5/6/24 Time: 10:20 a

Hartley test for homogeneity of variance

---

Calculated H statistic (max Var/min Var) = 2.68  
Closest, conservative, Table H statistic = 12.1 (alpha = 0.01)

Used for Table H ==> R (# groups) = 6, df (# reps-1) = 9  
Actual values ==> R (# groups) = 6, df (# avg reps-1) = 9.00

---

Data PASS homogeneity test. Continue analysis.

NOTE: This test requires equal replicate sizes. If they are unequal but do not differ greatly, the Hartley test may still be used as an approximate test (average df are used).

Shapiro Wilks test for normality

---

D =     0.086

W =     0.823

Critical W (P = 0.05) (n = 24) = 0.916

Critical W (P = 0.01) (n = 24) = 0.884

---

Data FAIL normality test. Try another transformation.

Warning - The two homogeneity tests are sensitive to non-normal data and should not be performed.

Connersville 5.24

File: fhmsurv      Transform: ARC SINE(SQUARE ROOT(Y))

Hartley test for homogeneity of variance

Bartlett's test for homogeneity of variance

---

These two tests can not be performed because at least one group has zero variance.

Data FAIL to meet homogeneity of variance assumption.

Additional transformations are useless.

Hartley test for homogeneity of variance

---

Calculated H statistic (max Var/min Var) = 30.15

Closest, conservative, Table H statistic = 184.0 (alpha = 0.01)

Used for Table H ==> R (# groups) = 6, df (# reps-1) = 3

Actual values ==> R (# groups) = 6, df (# avg reps-1) = 3.00

---

Data PASS homogeneity test. Continue analysis.

NOTE: This test requires equal replicate sizes. If they are unequal but do not differ greatly, the Hartley test may still be used as an approximate test (average df are used).
