**RE: Status Report for Sampling Event #1  
Supplemental Vapor Intrusion Investigation  
Hurricane Road Industrial Development, LLC  
Indiana Gymnastics Center Building  
1130 Eastview Drive  
Franklin, Indiana  
IDEM Site Identification Number 2013-34567  
Patriot Project Number 19-1979-01E**

Dear Mr. Johnson:

On behalf of Hurricane Road Industrial Development, LLC (HRID), Patriot Engineering and Environmental, Inc. (Patriot) is pleased to submit this status report for the Supplemental Vapor Intrusion (VI) Investigation conducted at the Indiana Gymnastics Center building (Gymnastics Building) located on the HRID property at 1130 Eastview Drive in Franklin, Indiana (the Site). This work was conducted in response to a request from the Indiana Department of Environmental Management (IDEM) to conduct additional VI sampling at the Site.

This status report summarizes the investigation activities and results of the VI Sampling Event #1 performed at the Site in January 2020. Additional VI sampling events will be performed at the Site in February and March 2020 and a final report for the Supplemental VI Investigation will be prepared and issued to IDEM following completion of the three VI sampling events.

## **PROJECT BACKGROUND**

Investigations performed at the HRID property have revealed the presence of volatile organic compounds (VOCs) in soil and groundwater. The chemicals of concern (COCs) present at the HRID property are primarily the VOCs tetrachloroethene (PCE) and trichloroethene (TCE), with lesser amounts of cis-1,2-dichloroethene (cis-1,2-DCE) and trans-1,2-dichloroethene (trans-1,2-DCE). Other VOCs, including methylene chloride and chloroform, have been reported sporadically in a small number of groundwater

samples and at very low concentrations, and are not considered COCs for the Site. Previous VI investigations conducted at the Site in December 2017 and August 2019 involved the collection of two exterior soil gas samples and one indoor air sample. The analytical data from the indoor air samples revealed the presence of naphthalene in the August 2019 sample at a concentration above the IDEM Remediation Closure Guide (RCG) Commercial/Industrial Indoor Air Vapor Exposure Screening Level (IASL) and several other VOCs at concentrations below the RCG Residential and Commercial/Industrial IASLs. The analytical data from the exterior soil gas samples revealed the presence of several VOCs, all of which were below the Residential and Commercial/Industrial Shallow Soil Gas Screening Levels. Based on these data, it did not appear that VI was occurring in the Gymnastics Building but additional investigation was recommended to document whether VI is occurring or if a source of indoor air impacts is associated with operations in the building.

## SITE DESCRIPTION

The HRID property contains five primary buildings including the Gymnastics Building, which is also referred to as Building 3 in previous VI investigation reports. The Gymnastics Building is approximately 10,000 square feet in size and is occupied by a gymnastics center (lessons and training). The building is open except for an office, lobby and seating/viewing area on the southeast side of the building and a restroom on the south-central portion of the building. The location and layout of the building is shown on the Sample Location Map included as Figure 1 in Attachment A.

## INVESTIGATION METHODOLOGY

The VI Sampling Event #1 was performed in the Gymnastics Building on January 6 and January 7, 2020 and consisted of the collection and analysis of two paired indoor air / sub-slab soil vapor samples and one additional indoor air sample at the locations shown on Figure 1. Prior to collecting the samples, a VI Indoor Air Building Survey Checklist was completed to identify building conditions that may be contributing to vapor intrusion, identify potential outside contaminant sources, and identify chemicals or products that are potential indoor sources of indoor air impacts. A copy of the Indoor Air Building Survey Checklist is included in Attachment B.

The sub-slab soil vapor samples were collected using Cox Colvin Vapor Pins® (vapor pins) equipped with tamper-proof, flush-mounted covers that had been installed in January 2020 prior to conducting VI Sampling Event #1. The vapor pins were inspected prior to sampling to ensure they had not been damaged or otherwise compromised and were leak tested using the mechanical “water dam” method. After testing, a section of Teflon tubing was attached to the vapor pin and the system was purged of ambient air using a hand pump. The Teflon tubing was then attached to a batch-certified 6-liter

Summa canister, the sampling train was leak-checked, and the pre-calibrated flow controller was opened to collect an approximately 24-hour sample. The paired indoor air samples were collected by placing a batch-certified 6-liter Summa canister in proximity to each sub-slab sample and opening the pre-calibrated flow controller to obtain an approximately 24-hour sample. Indoor air samples IA-2 and IA-3 were collected from within the open building while indoor air sample IA-1 was collected in the closed restroom and supply room in the south-central portion of the building.

At each sampling location, the identification numbers of the Summa canister and flow controller were recorded on a field log, along with the sampling start time and the initial Summa canister vacuum. At the completion of sampling the flow controller was closed, and the sampling end time and vacuum of the canister were recorded. The samples were shipped to Pace Analytical Services in Minneapolis, Minnesota for VOC analysis using U.S. EPA Method TO-15. Quality assurance / quality control (QA/QC) procedures included the collection and analysis of one duplicate sample (DUP-A) from the location of sub-slab soil vapor sample SS-2. Field data sheets for the VI sampling are included in Attachment B.

## FINDINGS

The laboratory analytical results for analytes detected in the various samples are summarized in Table 1 in Attachment C, and the laboratory analytical report is provided in Attachment D. Analysis of the VI samples revealed detectable concentrations of several VOCs in each of the samples. Several of the analytical data are marked with a "J" qualifier, which means the stated value is an estimated concentration above the adjusted method detection limit (MDL) and below the adjusted laboratory reporting limit (RL). The analytical results for the indoor air samples were compared to the RCG Residential and Commercial/Industrial (IASLs. The analytical results for the sub-slab vapor samples were compared to the RCG Residential and Commercial/Industrial Soil Gas Sub-Slab Screening levels (SGSSLs), which were derived by dividing the RCG IASLs by an attenuation factor of 0.03 as listed in Table 6-1 of the U.S. EPA vapor intrusion guidance document (OSWER Publication 9200.2-154 dated June 2015).

### Indoor Air Sample Results

Detectable concentrations of the COC TCE were reported in all three of the indoor air samples and the COC PCE was detected in one of the indoor air samples as discussed below:

- TCE was reported at concentrations ranging from 0.79 to 1.3 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) in the three samples collected at the Site, all of which were below the RCG Residential and Commercial/Industrial IASLs of 2.1 and 8.8  $\mu\text{g}/\text{m}^3$ , respectively.

- PCE was reported in one sample at a concentration of 0.59 ug/m<sup>3</sup>, which is below the RCG Residential and Commercial/Industrial IASLs of 42 and 180 ug/m<sup>3</sup>, respectively.

As shown on Table 2, several other non-COC VOCs were reported in the indoor air samples at concentrations well below their RCG Residential IASLs. The adjusted MDLs for the following compounds were greater than the RCG Residential IASLs but were below the RCG Commercial/Industrial IASLs in one or more samples: 1,1,2,2-tetrachloroethane, 1,1,2-trichloroethane, 1,2,4 trichlorobenzene, benzyl chloride, hexachloro-1,3,-butadiene, and naphthalene. Since the adjusted MDLs are below the RCG Commercial/Industrial IASLs and these compounds were not detected in the sub-slab soil vapor samples as described below, these compounds are not considered to be a concern at the Site.

### **Sub-Slab Vapor Sample Results**

Detectable concentrations of the COCs TCE and PCE were reported in both of the sub-slab soil vapor samples as discussed below:

- TCE was reported at concentrations of 5.8 ug/m<sup>3</sup> in sample SS-1 and 263 ug/m<sup>3</sup> in sample SS-2. The reported TCE concentration in sample SS-1 did not exceed the RCG Residential and Commercial/Industrial SGSSLs of 70 and 293 ug/m<sup>3</sup>, respectively. The reported TCE concentration in sample SS-2 exceeds the RCG Residential SGSSL but is below the RCG Commercial/Industrial SGSSL.
- PCE was reported at concentrations of 1.2 ug/m<sup>3</sup> in sample SS-1 and 43.3 ug/m<sup>3</sup> in the duplicate sample from SS-2. The reported PCE concentrations are below RCG Residential and Commercial/Industrial SGSSLs of 1,400 and 6,000 ug/m<sup>3</sup>, respectively.

As shown on Table 2, several other non-COC VOCs were reported in the sub-slab soil vapor samples at concentrations well below their RCG Residential SGSSLs.

### **CONCLUSIONS**

No VOCs exceeded the RCG Residential and Commercial/Industrial IASLs in any of the three indoor air samples collected at the Gymnastics Building on the HRID property in Franklin, Indiana. TCE exceeded the RCG Residential SGSSL in one of the two sub-slab soil vapor samples collected at the Gymnastics Building but did not exceed the Commercial/Industrial SGSSL. No other VOCs exceeded the RCG Residential or Commercial/Industrial SGSSLs.

If you have questions or comments regarding this report, or require any additional information, please do not hesitate to contact Mike Casper at [mcasper@patrioteng.com](mailto:mcasper@patrioteng.com) or at (317) 576-8058.

Very truly yours,

## INDOOR AIR BUILDING SURVEY CHECKLIST

Preparer's Name: JAMES CODY Date: 1/3/2020

Preparer's Affiliation: PATRIOT ENGINEERING Phone #: 317 558 5024

Site Name: HOUGHLAND CANNING Site # \_\_\_\_\_

Site Address (include city and zip): INDIANA GYMNASTICS CENTER

### Part I – Occupants

List of Current Occupants/Occupation (include children)

Name (Age)	Address: (Lot # or apt. #)	Sex (M/F)	Occupation
John Doe (42)	112 South St. Lot # 12	M	geologist

### Part II – Building Characteristics

Building type: residential / multi-family residential / office / strip mall / commercial industrial / other

Describe building: WAREHOUSE USED AS GYMNASIC CENTER Year constructed: UNKNOWN

Sensitive population: day care / nursing home / hospital / school / other (specify): GYMNASTIC CENTER FOR CHILDREN

Number of floors at or above grade: 1

Number of floors below grade: 0 (full basement / crawl space / slab on grade)

Depth of basement below grade surface: NA ft. Basement size: \_\_\_\_\_ ft<sup>2</sup>

Basement floor construction: concrete / dirt / slab / stone / other (specify): NA

Foundation walls: poured concrete / cinder blocks / stone / other (specify): \_\_\_\_\_

Basement sump present? Yes / No   Sump pump? Yes / No   Water in sump? Yes / No **NA**

Significant cracks present in basement floor? Yes / **No**

Significant cracks present in basement walls? Yes / No

Are the basement walls or floor sealed with waterproof paint or epoxy coatings? Yes / No

Is there a whole house fan? Yes / No

Septic system? Yes / Yes (but not used) **No**

Irrigation/private well? Yes / Yes (but not used) **No**

Type of ground cover outside of building: **grass** **concrete** asphalt / other (specify) \_\_\_\_\_

Sub-slab vapor/moisture barrier in place? Yes / **No** Don't know

Type of barrier: \_\_\_\_\_

Type of heating system (circle all that apply):

hot air circulation      hot air radiation      wood      steam radiation  
heat pump      hot water radiation      kerosene heater      electric baseboard  
other (specify): \_\_\_\_\_

Type of ventilation system (circle all that apply):

central air conditioning      mechanical fans      bathroom ventilation fans  
individual air conditioning units      kitchen range hood fan      outside air intake  
other (specify): \_\_\_\_\_

Type of fuel utilized (circle all that apply):

Natural gas / electric / fuel oil / wood / coal / solar / kerosene / other (specify): \_\_\_\_\_

### Part III – Outside Contaminant Sources

Contaminated site within 50-ft (BTEX) or 100-ft (Chlorinated)? **YES** \_\_\_\_\_

If yes: Site Name: **HOUNLAND  
CANNING** Site Number: \_\_\_\_\_

Other stationary sources nearby (gas stations, emission stacks, etc.): **NO** \_\_\_\_\_

Heavy vehicular traffic nearby (or other mobile sources): **EASTVIEW DRIVE** \_\_\_\_\_

#### Part IV – Indoor Contaminant Sources

Identify all potential indoor sources found in the building (including attached garages), the location of the source (floor & room), and whether the item was removed from the building 48 hours prior to the indoor air sampling event. Any ventilation implemented after removal of the items should be completed at least 24 hours prior to the start of the indoor air sampling event.

Potential Sources	Location (s)	Removed (Yes / No / NA)
Gasoline storage cans		
Gas-powered equipment (mowers, etc)		
Kerosene storage cans		
Paints / thinners / strippers		
Cleaning solvents		
Oven cleaners		
Carpet / upholstery cleaners		
Other house cleaning products		
Moth balls		
Polishes / waxes		
Insecticides		
Furniture / floor remover		
Nail polish / polish remover		
Hairspray		
Cologne / perfume		
Air fresheners		
Fuel tank (inside building)		NA
Wood stove or fireplace		NA
New Furniture / upholstery		
New carpeting / flooring		NA
Hobbies – glues, paints, lacquers, photographic darkroom chemicals, etc		
Scented trees, wreaths, potpourri, etc.		
Other (specify):		

#### Part V – Miscellaneous Items

Do any occupants of the building smoke? Yes  No  How often? \_\_\_\_\_

Last time someone smoked in the building? \_\_\_\_\_ hours / days ago

Does the building have an attached garage directly connected to living space? Yes  No

If so, is a car usually parked in the garage? Yes / No

Are gas-powered equipment or cans of gasoline/fuels stored in the garage? Yes / No

Do the occupants of the building have their clothes dry cleaned? Yes  No

If yes, how often? Weekly / monthly / 3-4 times a year

When was the last dry cleaned garment brought home? \_\_\_\_\_

Do any of the occupants use solvents in work? Yes  No

If yes, what types of solvents are used? \_\_\_\_\_

If yes, are their clothes washed at work? Yes / No

Have any pesticides/herbicides been applied around the building or in the yard? Yes  No

If so, when and which chemicals? \_\_\_\_\_

Has there ever been a fire in the building? Yes  If yes, when? \_\_\_\_\_

Has painting or staining been done in the building in the last 6 months? Yes / No

If yes, when?  and where? \_\_\_\_\_

## Part VI – Sampling Information

Company/Consultant: PATRIOT ENGINEERING Phone number: ( ) \_\_\_ - \_\_\_

Sample Source: Indoor Air  Sub-Slab  Near Slab Soil Gas / Exterior Soil Gas

Sampler Type: 400 mL – 1.0 L Summa Canister  6 L Summa Canister  Other  
(specify): \_\_\_\_\_

Analytical Method: TO-14A  TO-15  TO-15 SIM / other: \_\_\_\_\_

Laboratory: PACE ANALYTICAL

Sample locations (floor, room):

Field/Sample ID# SEE FIELD DATA SHEETS Field/Sample ID# \_\_\_\_\_

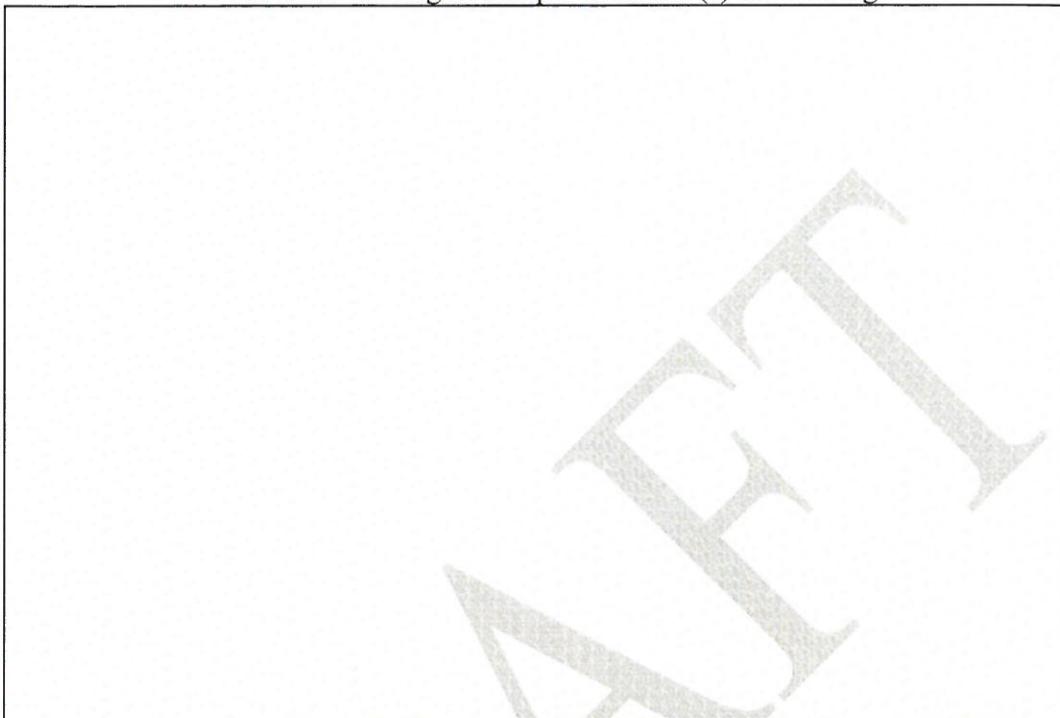

Field/Sample ID# \_\_\_\_\_ Field/Sample ID# \_\_\_\_\_

Field/Sample ID# \_\_\_\_\_ Field/Sample ID# \_\_\_\_\_

Were "Instructions for Occupants" followed? Yes  No

If not, describe modifications: \_\_\_\_\_

Provide Drawing of Sample Location (s) in Building

#### Part VII – Metrological Conditions

Was there significant precipitation within 12 hours prior to (or during) the sampling event?  
Yes  No

Describe the general weather conditions: COLD 37° DRY

#### Part VIII – General Observations

Provide any information that may be pertinent to the sampling event and may assist in the data interpretation process.

## **Recommended Instructions for Residents**

The following is a suggested list for residents to follow (to the extent practical) in order to reduce interference in obtaining representative samples. IDEM suggests that these items be followed starting at least 48 hours prior to and during the sampling event.

- Do not open windows, fireplace opening or vents
- Do not keep doors open.
- Do not operate ventilation fans.
- Do not use air fresheners or odor eliminators.
- Do not smoke in the house to the extent practical.
- Do not use wood stoves, fireplace or auxiliary heating equipment (e.g., kerosene heater)
- Do not use paints or varnishes.
- Do not use cleaning products (e.g., bathroom cleaners, furniture polish, appliance cleaners, and floor cleaners).
- Do not use cosmetics, including hair spray, nail polish, nail polish remover, perfume, etc.
- Do not partake in indoor hobbies that use solvents.
- Do not apply pesticides.
- Do not store containers of gasoline, oil or petroleum-based or other solvents within the house or attached garage (except for fuel oil tanks).
- Do not operate or store automobiles in an attached garage.

RE: Project: GYMNASTICS CENTER-Revised Report  
Pace Project No.: 10505193

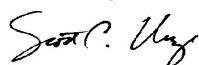

Dear Mike Casper:

Enclosed are the analytical results for sample(s) received by the laboratory on January 13, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

This report was revised on January 24, 2020, to report to the method detection limits.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Scott Unze for

## PROJECT NARRATIVE

Project: GYMNASTICS CENTER-Revised Report

Pace Project No.: 10505193

---

**Method:** TO-15

**Description:** TO15 MSV AIR

**Client:** Patriot Engineering-IN

**Date:** January 24, 2020

### General Information:

6 samples were analyzed for TO-15. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

### Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

### Initial Calibrations (including MS Tune as applicable):

All criteria were within method requirements with any exceptions noted below.

QC Batch: 654698

SS: This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.

- LCS (Lab ID: 3519359)
- Vinyl acetate

### Continuing Calibration:

All criteria were within method requirements with any exceptions noted below.

### Internal Standards:

All internal standards were within QC limits with any exceptions noted below.

### Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

### Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

### Duplicate Sample:

All duplicate sample results were within method acceptance criteria with any exceptions noted below.

### Additional Comments:

Analyte Comments:

QC Batch: 654698

E: Analyte concentration exceeded the calibration range. The reported result is estimated.

- DUP (Lab ID: 10505193003)
  - Ethanol
- SS-1 (Lab ID: 10505193001)
  - Ethanol

This data package has been reviewed for quality and completeness and is approved for release.

## QUALIFIERS

Project: GYMNASTICS CENTER-Revised Report  
Pace Project No.: 10505193

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.  
ND - Not Detected at or above adjusted reporting limit.  
TNTC - Too Numerous To Count  
J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.  
MDL - Adjusted Method Detection Limit.  
PQL - Practical Quantitation Limit.  
RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.  
S - Surrogate  
1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.  
Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.  
LCS(D) - Laboratory Control Sample (Duplicate)  
MS(D) - Matrix Spike (Duplicate)  
DUP - Sample Duplicate  
RPD - Relative Percent Difference  
NC - Not Calculable.  
SG - Silica Gel - Clean-Up  
U - Indicates the compound was analyzed for, but not detected.  
N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.  
Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.  
TNI - The NELAC Institute.

### ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.  
SS This analyte did not meet the secondary source verification criteria for the initial calibration. The reported result should be considered an estimated value.
