EXECUTIVE SUMMARY

Arcadis U.S., Inc. (Arcadis), on behalf of CSX Transportation, Inc. (CSX) has prepared this Current Conditions Report to document the investigative and remedial activities that have occurred at the former Indiana Creosoting Facility located at 240 Country Club Drive, Bloomington, Monroe County, Indiana, (Site). The objective of this report is to document the Site activities that have occurred since the previous *Geology and Hydrogeology Report was* submitted to the Indiana Department of Environmental Management (IDEM) on October 27, 2011. This report documents the site activities that occurred from October 2011 through December 7, 2018. The following bullets summarize key findings and conclusions associated with the various investigations and remedial activities conducted at this site.

- An extensive free product recovery program was initiated in 2011 for the project, monitoring 40 select wells on a weekly basis. Over 10,200 gallons of free product/water has been recovered from the site; with over 5,200 gallons of that total being free product only. The recovered volumes peaked in 2013 and continue to decline with only 400 gallons of free product/water (250 gallons of free product only) recovered in 2018.
- The *Human Health Risk Assessment* (HHRA) and *Screening-Level Ecological Risk Assessment* (SLERA) both were submitted in 2015, reviewed by the IDEM and indicate no significant risk associated with the site.
- As a proactive measure, a Vapor Intrusion Assessment was conducted on the commercial businesses (Walnut Station Commercial Plaza) on the eastern portion of the site in 2010. Sub-slab and Indoor Air samples were collected from each of the tenants of the commercial plaza as part of the assessment. Concentrations were below the screening levels and indicate vapor intrusion is not an issue with this property.
- The recent groundwater sampling event (March 2018) requested by the IDEM from their review of the risk assessments, indicates the groundwater concentrations continue to be stable and/or declining. Furthermore, groundwater monitoring has occurred at the site for over 20 years through a network of 76 monitoring wells analyzing for the IDEM approved constituent of concern (COC) list of benzene, toluene, ethylbenzene, and xylenes (BTEX), semi volatile organic compounds (SVOCs), and total/dissolved metals.
- A total of eight (8) additional monitoring wells, twelve (12) recovery wells, and four (4) pilot study recovery wells have been installed since October 2011 to further define impacts in the subsurface and/or for increased dense non-aqueous phase liquid (DNAPL) recovery. The nature and extent of the residual creosote impacts has been delineated through site characterization and coordinated with the IDEM.
- Impacted surface soil, subsurface soil and sediments have been removed from the site to allow for Exposure Point Concentrations (EPCs) to be utilized for risk-based exposure. All excavation activities were conducted with approval from the IDEM Voluntary Remediation Process (VRP) section and appropriate permits through the United States Army Corps of Engineers (USACE), IDEM Water Quality Section, and Indiana Department of Natural Resources (IDNR).

- Approximately 9,000 tons of creosote bleed soils and impacted surface soils, with elevated levels of benzo(a)pyrene were excavated from twenty (20) areas of interest across the northern and southern tracts of the Site from late 2011 through 2013.
- Approximately 550 tons of sediment, from two (2) point bar areas within Clear Creek, immediately adjacent to the site, were excavated in 2012. The purpose of the work was to remove sediments with residual impacts within Clear Creek, south of Country Club Drive. The two sediment removal areas were dewatered with the assistance of a series of aqua dams and trash pumps; the aqua dams assisted in diverting the creek channel around the sediment removal areas, reducing the amount of water in the removal areas.
- Arcadis performs an annual walk-through of Clear Creek, which flows north-south through the center of the property, to observe any visible sheens that may be migrating from the site. During the creek walk, Arcadis monitors for the presence of sheens and/or creosote bleeds emanating from the bedrock fractures along the creek bottom. The creek is inspected for the entire distance it traverses through to the Site. No visible sheens have been observed during the walk-through.
- As part of the permits optioned for the excavation activities, a tree mitigation project was implemented by CSX at the site. A total of eighteen (18) trees at sizes greater than 10 inches diameter-at-breast-height (DBH) were removed as part of the soil excavation activities. In accordance with the IDNR Construction in a Floodway Permit No. FW-25726, these trees were to be replaced at a 5:1 ratio (90 trees). In October 2012, ninety-one (91) trees were planted within five (5) separate excavation areas (zones). Annual tree reports have been submitted to the IDNR, detailing the survival rates for years: 2013, 2014, 2015, and 2016. A letter from the IDNR granting the release from further annual tree monitoring was received on November 20, 2017.
- Two temporary remediation storage areas were constructed at the Site in 2014. A storage compound (eastern compound) was constructed on Lot #3 (Figure 6), located south of Country Club Drive and east of Clear Creek consisting of a 40’ x 40’ x 8’ chain link fenced compound, containing a 20’ x 20’ x 4” concrete pad. A temporary storage building and compound (western compound) was constructed south of Country Club Drive, west of Clear Creek consisting of an 80’ x 50’ x 8’ chain link fenced compound, containing a 60’ x 40’ x 4” concrete pad, and a 36’ x 32’ post frame building. The purpose of the compounds is for the storage of remediation equipment (gator, trailers, transfer containers and equipment) necessary for DNAPL removal, and for the storage of fifty-five (55) gallon drums containing free product/water generated from the free product recovery program.
- To prepare for initiation of the free product recovery program, approximately 2,600 linear feet temporary access roads were constructed to improve site access and enable continued remediation cleanup at the Site from December 2011 through February 2012. Additionally, in February 2012, a 24’ long by 36” diameter concrete culvert was installed within a drainage ditch leading to Clear Creek, located south of County Club Drive and east of Clear Creek. The Culvert was placed to allow for temporary roadway access across the drainage ditch for free product recovery operations. The temporary access roads and culvert will be removed once remedial objectives for regulatory closures at the Site are met. The affected wetland area will then be planted with a marsh-appropriate seed mixture.
- In November 2011, the City of Bloomington replaced an existing 30” diameter storm water drainage culvert pipe which had fallen into disrepair, with a new 36” diameter x 246’ long reinforced concrete pipe along a similar alignment as the existing culvert. Once the culvert was fully installed, some culvert sections were approximately 1.0’ above ground surface as they crossed onto CSX property. The City of

Bloomington was required to construct two 50’ x 12’ x 8” concrete pads over the culvert piping to allow continual access the northern tract of CSX property with heavy vehicular traffic.

- On December 7, 2011, CSX and Arcadis conducted a public open house meeting at Lora L. Batchelor Middle School. The purpose of the public open house was to update the public on site activities and inform the public of a large soil removal project in the near future at the Site, and that the Site was being monitored with oversight by the IDEM, to ensure public safety.

The following report documents the findings in greater detail. CSX Transportation will continue to work with the IDEM to ensure there is no risk to human health and the environment from the residual impacts from the former operations of the Indiana Creosoting Company.

1 INTRODUCTION

Arcadis U.S., Inc. (Arcadis), has prepared this Current Conditions Report, at the request of CSX Transportation, Inc. (CSX) for the former Indiana Creosoting Facility located at 240 Country Club Drive, Bloomington, Monroe County, Indiana, (Site). This report documents the site activities that occurred from October 2011 through December 7, 2018. A Site Location Map is included as Figure 1.

2 Site History and Background

The Site is located in Township 8 North, Range 1 West, Sections 9 and 16 within Perry Township in Bloomington, Indiana (Figure 1). The Site is bordered to the north and east by commercial/industrial properties; and to the southeast, south and west by predominantly residential properties, although there is some commercial/industrial property along these boundaries as well. Except for the majority of the commercial land acquired by CSXT in 2010, the Site occupies the valley floor of Clear Creek and is relatively flat, with a gentle slope toward the creek. The commercial property acquired in 2010 is also predominantly flat lying and is elevated about 10 feet above the valley floor. The exception is toward the western edge of this property, where the land surface drops off steeply to the valley floor.

The Site is a generally rectangular shaped parcel of land approximately 40 acres in size and is divided into two portions by Country Club Road (Figure 2). The first portion, approximately 14 acres in size, is located north of Country Club Road and is divided by Clear Creek, which flows from north to south through the portion. This entire portion of the site generally lies in or near the floodplain of Clear Creek. The area west of Clear Creek (north of Country Club Road) is where the former creosoting operations took place. Creosote storage tanks and various railroad spurs were also located here. The area to the east of Clear Creek is a marshy area of floodplain that was included among land that CSX purchased in 2006 and was not part of the former wood-treating operation.

The second portion of the Site, which is also divided by Clear Creek, is located south of Country Club Road, and comprises approximately 26 acres. The area to the west of Clear Creek was historically used to store untreated railroad ties and was never developed. The area to the east of Clear Creek consists of floodplain land that was included in CSXT's 2006 purchase described in the preceding paragraph, as well as approximately 6 acres of commercial land located predominantly above the floodplain that CSXT purchased in 2010. This area (east of Clear Creek) has historically been undeveloped.

The Site is currently undeveloped, except for a portion of the land purchased in 2010, which contains a small strip mall and oil change facility. In the former operations area, a few concrete foundations remain (Figure 2). Most of the site is covered either with brush and grasses, or by trees (particularly along Clear Creek). Property access has been restricted by the installation of a fence along Country Club Road.

Wood-treating operations began circa 1914 by the American Creosoting Company and ceased in 1976. The Indiana Creosoting Company, a subsidiary of the Monon Railroad, purchased the property from the American Creosoting Company in 1961. The Monon Railroad merged with the Louisville and Nashville Railroad in 1971, which was the predecessor company to CSXT. All creosote storage, handling, and use appears to have occurred north of Country Club Road in the former operations area. Known locations of creosote storage tanks and other former operational features are shown on Figure 2.

The Site was formally entered into the Indiana Department of Environmental Management (IDEM) Voluntary Remediation Program (VRP) upon receipt of a signed application acceptance letter dated May 13, 1997. The VRP Application and subsequent Voluntary Remediation Agreement (VRA) reflect CSXT's intention to investigate and remediate the Site, as necessary, to achieve VRP closure for surface soil, subsurface soil, and groundwater for a non-residential property, and to ultimately obtain a Certificate of Completion and Covenant Not to Sue. The current remediation and clean-up objectives for soil and groundwater at the Site are 1996 VRP Tier II Default Non-residential (Industrial) Scenario for on-site impacts and residential for off-site impacts, unless an Environmental Restrictive Covenant (ERC) is agreed upon by the off-site property owners. CSXT expects the land-use of this property to remain industrial at this time. The Site's constituents of concern (COCs) are BTEX (benzene, toluene, ethylbenzene, and xylenes), poly aromatic hydrocarbons (PAHs), phenolic compounds, phthalates, arsenic, and lead. The specific analytes and their respective closure levels are shown on Table 1. The affected media is surface soils, subsurface soils and bedrock, sediments and groundwater.

If cleanup goals for specific COCs were not established in the 1996 manual, then other cleanup goals were utilized including the 1996 IDEM Non-Rule Lead Policy and 2006 RISC Default Industrial Goals. Additionally, Exposure Point Concentrations (EPCs) may be calculated for constituents which may be detected above the applicable Cleanup Goals; these EPCs may in turn be compared to the applicable Cleanup Goals.

2.1 Site Name, Address and Owner Contact Information

Site Name:	Former Indiana Creosoting Facility
Facility Identification Number:	IDEM VRP No. 6970403
CSX Site Number	9415829
Site Address:	240 Country Club Drive Bloomington, Monroe County, Indiana 47401
Site Contact:	Daniel Dyer, CSX
Phone No:	(317) 267-4151
Property Owner Contact:	CSX Transportation, Inc. 500 Water Street Jacksonville, FL 32202 Phone No: (904) 475-0353

2.2 Site Contact Responsible for VRP Process

The CSX contact for the project is:

Mr. Daniel Dyer, CPG
Manager Environmental Remediation
CSX Transportation, Inc.
31 East Georgia Street
Indianapolis, IN 46204
Phone No.: (317) 267-4151

CSX has contracted Arcadis to perform the investigations and remedial activities at the Site. The Arcadis contact is:

Mr. Steven C. Sharp, LPG
150 West Market Street, Suite 728
Indianapolis, Indiana 46204
Phone No.: (317) 236-2829

2.3 Previously Submitted Reports and Correspondence

There have been numerous environmental investigations conducted throughout the Site as well as off-site areas. The following reports have previously been submitted to the IDEM.

- *Indiana Department of Environmental Management Site Investigation – August 1987*
- *Limited Remediation Activity – January 1989 – ENSR*
- *Initial Assessment – December 1989 – ATEC*
- *Soil Sampling and Analysis Report – March 1990 – ATEC*
- *Site Characterization Work Plan – March 1990 – Weston, Inc.*
- *Sampling and Analysis Plan – January 1991 – ARCADIS G&M*
- *Soil Remediation Report – March 1992 – ARCADIS G&M*
- *Remedial Investigation / Hazard Characterization – August 1992 – ARCADIS G&M*
- *Additional Subsurface Investigation – June 1995 – ARCADIS G&M*
- *Supplemental Subsurface Investigation – December 1995 – ARCADIS G&M*
- *Risk Assessment, Former Indiana Creosoting Company – September 1996 – ARCADIS G&M*
- *Phase II Investigation Work Plan – August 1999 – ARCADIS G&M*
- *Phase II Investigation Report – January 2003 – ARCADIS G&M*
- *Further Site Investigation Report – September 2006 – ARCADIS*
- *Remediation Work Plan – December 2009 – ARCADIS*
- *Geology and Hydrogeology Report – October 2011 – ARCADIS*
- *Community Relations Plan – November 2011 – ARCADIS*
- *Screening Level Ecological Risk Assessment (SLERA) Report – November 2011 – Arcadis*
- *Human Health Risk Assessment (HHRA) Limited Risk Assessment Report – May 2015 – Arcadis*
- *Vapor Intrusion Investigation Report – May 2015 – Arcadis*

2.4 Site Geology/Hydrogeology

The site lies on the floor of a shallow north-south trending valley drained by Clear Creek. The creek runs southward through the Site dropping approximately 8 ft in elevation over the ½ mile between the north and south ends of the Site. Clear Creek is a gaining stream which flows on or very near bedrock but has

not developed an entrenched bedrock channel. The banks of the creek are typically composed of 3 feet of fine-grained flood-plain alluvium, often with low natural levies. The majority of the Site is within the active flood plain and has been observed to flood several times a year. Moving outward (east and/or west) away from Clear Creek, the surface elevation increases dramatically as much as 15 ft at the Site and then substantially higher (up to 30 ft) as little as a block away from the Site.

The site geology consists of alluvium in the upper 5 to 15 ft thickening away from Clear Creek. The alluvium is underlain by a thin (0 to 5 ft) Harrodsburg Limestone unit in some areas. The Harrodsburg is underlain by the Ramp Creek Formation which is an interbedded siltstone and limestone unit as thick as 50 ft at the Site. The Ramp Creek Formation is underlain by the Borden Group which is a massive siltstone unit several hundred feet thick. The Borden Group, as detailed later, forms an aquitard which prevents the creosote from penetrating deeper than the depth of the Borden (approximately 40 ft below ground surface (bgs) on-site).

3 ACTIVITIES UPDATE AND CURRENT CONDITIONS

The following sections document the activities that have taken place at the Site since the *Geology and Hydrogeology Report* was submitted to the IDEM in October 2011. Each of the activities that have occurred at the site since October 2011 will be discussed below.

3.1 Risk Assessment

3.1.1 Human Health Risk Assessment (HHRA) Limited Risk Assessment

Arcadis prepared a limited risk assessment on behalf of CSX to assist with closure activities under the IDEM VRP at the former Indiana Creosoting Company facility. The risk assessment focused on the COCs at the Site which included dense non-aqueous phase liquid (DNAPL [creosote]), selected SVOCs (phenols, phthalates, and alkylated PAHs), selected VOCs (benzene, toluene, ethylbenzene, and xylenes [BTEX]), and select metals (arsenic, lead). The *HHRA Limited Risk Assessment Report* was submitted to the IDEM in March 2016.

Due to the ongoing groundwater remediation activities and the lack of human exposure to groundwater, the only exposure pathways determined to be complete is for contact with surface soil by a site worker, and the inhalation of vapors in indoor air by an off-Site worker. Thus, this risk assessment focused on the human health risks to the exposure of on-site surface soil and the potential for off-site vapor intrusion.

Numerous soil excavations have occurred at the Site since 2006, resulting in the removal of approximately 9,941 tons of impacted soil, approximately 550 tons of impacted sediment, and approximately 890 tons of soil from the interceptor trenches, bedrock, and sandbar sediment during the creek liner installation. The surface soil COCs were evaluated and EPCs were calculated where possible. All surface soil EPCs are below their respective default closure goals on-site north and south of Country Club Road, and therefore not a significant risk.

Based on the off-site groundwater data, off-site soil data, and the results of the vapor intrusion study conducted at a building adjacent to the Site, vapor intrusion related to COCs is not a concern. Though Clear Creek has been identified as an ecologically susceptible area, a SLERA was conducted for the

portion of the Clear Creek that is associated with the Site. The results of the definitive SLERA indicate that ecologically significant adverse effects are unlikely at the Clear Creek Study Area due to site- related COCs.

The exposure pathways and exposure routes for the current and future use of the Site evaluated in this limited risk assessment conclude there are no unacceptable risks at the former Indiana Creosoting Company facility based on the supporting lines of evidence detailed below:

3.1.1.1 Surface Soil

Approximately 10,000 tons of surface soil on site have been excavated since 2001. EPCs were calculated with the remaining surface soil data and all COCs are below their respective Tier II default Non-residential closure goals. Off-site surface soil impacts have not been identified. There are no occupied buildings on the Site, and an ERC will restrict future building on the Site. In the unlikely event a building is constructed onsite, a focused soil gas investigation is recommended in the area of the planned building and/or engineering controls be implemented such as a vapor barrier. Based on these lines of evidence the risk to human health from exposure to surface soil via ingestion, dermal contact, or inhalation of dust and vapors in the outdoor air are minimal.

3.1.1.2 Subsurface Soil

The Site is currently vacant, and CSX intends to deed restrict future residential and commercial/industrial development of the property. Thus, redistribution of soil will not be allowed under the terms of the proposed deed restriction. Therefore, contact with subsurface soil will not occur in the future. In the unlikely event construction does occur on site a soil gas investigation and/or engineering controls are recommended as outline above and a Construction Management Plan is recommended to address potential exposure to COCs via incidental ingestion, dermal contact and the inhalation of dust and vapors in outdoor air. Based on these lines of evidence the risk to human health from exposure to subsurface soil via ingestion, dermal contact, the inhalation of dust and vapors in the outdoor air, or the inhalation of indoor air vapor can be eliminated.

3.1.1.3 Groundwater

There are no known drinking water wells in the vicinity of the Site. An ERC will restrict the installation of new drinking water wells on the Site, and an ERO will restrict drinking water wells in the vicinity of the Site. There no occupied buildings on-Site and an ERC will restrict future building on the Site. In the unlikely event a building is constructed on site, ARCADIS recommends a focused soil gas investigation in the area of the planned building and/ engineering controls are implemented such as a vapor barrier. An off-site VI investigation and data evaluation determined the potential for vapor intrusion to occur off site can be eliminated. Ongoing groundwater remediation activities are significantly reducing the levels of free product. Based on these lines of evidence the risk to human health from exposure to COCs in groundwater via ingestion, dermal contact or inhalation of indoor air vapor can be eliminated.

3.1.1.4 Sediment and Surface Water

A definitive SLERA was conducted using sediment and surface water samples obtained from Clear Creek in 2010 to evaluate the effectiveness of the mitigation efforts. The results of the definitive SLERA indicate that ecologically significant adverse effects are unlikely at the Clear Creek Study Area due to Site related COCs. Based on the lines of evidence outlined in the SLERA ecologically significant adverse effects are unlikely at the Clear Creek Study Area due to COCs.

3.1.2 Vapor Intrusion Investigation

As a proactive measure, Arcadis completed a vapor intrusion (VI) evaluation at the Walnut Station Commercial Plaza building, which is adjacent to the Site. Groundwater impacts and free product have been discovered near and/or below the Walnut Station Commercial Plaza. Based on years of investigation the groundwater impacts and free product appear to be closer to the Walnut Station Commercial Plaza than any other structure near the site. Groundwater concentrations and free product combined with the unique geological conditions warranted investigation of the vapor intrusion pathway. Paired indoor air and sub-slab vapor sampling was conducted within the structure. The *Vapor Intrusion Investigation Report* was submitted to the IDEM in May 2015.

In November 2010, ARCADIS collected information on the building, installed permanent sub-slab vapor points, and collected paired sub-slab vapor and indoor air samples to determine if the vapor intrusion pathway was complete. A representative from the Center for Toxicology and Environmental Health accompanied ARCADIS personnel throughout the sampling process.

The Walnut Station Commercial Plaza is a one-story slab-on-grade structure that is divided into five sections. Indoor air samples were collected from each building façade immediately prior to sub-slab vapor sampling in accordance with IDEM's Draft Vapor Intrusion Pilot Program Guidance dated 2006. Indoor air and sub-slab samples were collected in each façade of the building by both USEPA Method TO-15 GC/MS and USEPA Method TO-17 GC/MS.

3.1.2.1 Indoor Air Sampling

Indoor air samples were collected from the Crosstown Cleaners (2622 S. Walnut), Advanced Cash (2618 S. Walnut) and AT&T (2626 S. Walnut) on November 15, 2010. Concurrently, two outside ambient air samples were collected. Indoor air samples were collected at Domino's Pizza (2620 S. Walnut) and the vacant space (2616 S. Walnut) on November 16, 2010. The analytical results were compared to the IDEM (February 2010) indoor air screening levels.

The indoor air and outside ambient air sample results by method TO-15 detected benzene, toluene, ethyl benzene, m,p-xylene, and o-xylene at concentrations below the IDEM screening levels for the 30-year exposure duration under the residential and commercial scenario in all samples. Naphthalene was not detected in any of the indoor air or outside ambient air samples by method TO-15. These concentrations indicate vapor intrusion is not an issue at the Walnut Station Commercial Plaza.

The indoor air and outside ambient air sample results by method TO-17 were all below the detection limit for the constituent list (naphthalene, 2-methylnaphthalene, acenaphthylene, and phenanthrene).

3.1.2.2 Sub-Slab Air Sampling

Sub-slab vapor samples were collected on November 17, 2010 in each façade of the commercial building. The analytical results were compared to the IDEM (February 2010) sub-slab screening levels. The IDEM did not provide sub-slab screening levels for toluene, ethylbenzene, xylenes or naphthalene. Therefore, screening levels for these constituents were back-calculated from IDEM commercial indoor air screening levels using an attenuation factor of 0.1 for sub-slab vapor to indoor air.

The sub-slab sample results by method TO-15 were non-detect for ethyl benzene, m,p-xylene, and o-xylene at all sub-slab ports. Benzene and toluene were non-detect in all sub-slab ports except at Domino's Pizza (2620 S Walnut) with concentrations of 3.9 µg/m^3 and 8.5 µg/m^3, respectively. These concentrations are well below the IDEM screening levels for prompt action at the 30-year exposure duration for both benzene and toluene (53 µg/m^3 and 72,000 µg/m^3, respectively) under the commercial scenario.

The sub-slab sample results by method TO-17 were non-detect for 2-methylnaphthalene, acenaphthylene, and phenanthrene at all sub-slab ports. Naphthalene was non-detect in all sub-slab ports except for Crosstown Cleaners (2622 S Walnut) where a concentration of 7.1 µg/m^3 was detected. This concentration is well below the IDEM screening level for prompt action at the 30-year exposure duration (44 µg/m^3) under the commercial scenario. These concentrations indicate there is not a significant vapor source below the Walnut Station Commercial Plaza.

3.1.3 Screening-Level Ecological Risk Assessment (SLERA)

Arcadis developed a definitive SLERA on behalf of CSXT to assist with closure activities under the IDEM VRP at the former Indiana Creosoting Company facility. Due to ongoing investigation and remediation activities, the SLERA focused on the portion of Clear Creek that is associated with the Site as the Study Area. The SLERA Report was submitted to the IDEM in March 2016.

The SLERA focused on the COCs at the Site which included DNAPL (creosote), selected SVOCs (phenols, phthalates, and priority pollutant and alkylated PAHs), and selected VOCs (BTEX), and metals (total, dissolved, and as simultaneously extracted metals/acid-volatile sulfide [SEM-AVS]).

The SLERA was conducted in two phases. A preliminary SLERA was conducted in 2004 based on sediment, surface water and porewater data collected in 1991 and 2003. The preliminary SLERA concluded that the only COCs that may cause potential risk to ecological receptors in Clear Creek are PAHs in sediment. Based in part on the results of the preliminary SLERA, and intermittent presence of DNAPL globules on the creek bottom, a creek liner was installed along an approximate 170-foot section of Clear Creek within the northern tract of the Site, immediately adjacent to the former operations area, in the Summer-Fall of 2007.

Sediment and surface water samples were obtained from Clear Creek in 2010 to evaluate the effectiveness of the mitigation efforts. The data was used to conduct a definitive SLERA for the Study Area at Clear Creek. The results of the definitive SLERA indicate that ecologically significant adverse effects are unlikely at the Clear Creek Study Area due to Site related COCs. Therefore, further investigation of potential ecological risks and remediation to reduce potential ecological risks are not warranted for Clear Creek.

3.2 Nature and Extent: Site Characterization

3.2.1 Monitoring Well Installation

Eight (8) monitoring wells (MW-32B/C, MW-54A/B, MW-55 A/B, and MW-56A/B) have been installed at the Site since October 2011. MW-32B and MW-32C were installed on the southern Site boundary, to monitor deeper groundwater conditions. MW-54A and MW-54B were installed to assess groundwater conditions at Lot 3, and to assess groundwater conditions between the former MW-27A location and MW-28 series. MW-55A and MW-55B were installed near the center of the Site to monitor deeper groundwater conditions. MW-56A and MW-56B were installed offsite, southwest of the Site boundary, to monitor groundwater conditions.

Bedrock drilling was conducted utilizing a water rotary rock coring HQ diamond bit mounted on a mini-sonic rig. The bedrock was cored using a five-foot-long, HQ core barrel that produced a five-foot-long by 2.5-inch diameter core; creating a 3.78-inch diameter borehole. Drilling was performed using water (only) as drilling fluid. Drilling fluids (water) were recovered to the extent practicable and properly containerized for disposal.

Field geologists documented the volume of drilling water used, drilling water returned, and calculated the volume of water lost for each drilling interval. Field geologists also noted any sheens, odors, or color changes in the drilling water return. Drilling fluids were not reused at subsequent well locations, and fresh water was used at each borehole. During the drilling process, water loss volumes where closely evaluated to identify potential zones of increased permeability. Recorded water loss volumes were considered during the well construction design process in order to select appropriate intervals within the bedrock for groundwater screening.

Recovered bedrock core was characterized in the field and observations were recorded in the bedrock coring log for each well location. These logs provide detailed characterizations of all recovered rock cores within a consistent comprehensive word description, which documents the encountered subsurface environment and the procedures used to gain that description. All logs, for wells installed at the Site since October 2011, are provided in Appendix A. The rock cores were logged in the field using standard methods for identifying rock type, texture, hardness, solution and void conditions, rock quality designations, and percent recovery. Additionally, the rock core was logged for more detailed analysis of mineralogy, dissolution features, and structural characterization. The recovered core was closely examined for the presence of DNAPL and/or sheens. The depths of all naturally occurring fractures, structural and lithographic features were documented on the bedrock coring log. Upon the completion of each core run, the depth of core hole was measured to properly document the termination depth after each core run. The percentage of bedrock core recovery for each core run was calculated and recorded on the bedrock coring log and core box. Rock Quality Designation (RQD) values were calculated for each core run. RQD values were calculated to indicate rock-mass properties according to Deere (1986) by summarizing all the bedrock core portions greater than four inches in length and dividing the sum of these pieces by the length of the bedrock core run. RQD is expressed as a percentage.

All retrieved bedrock core was handled in a manner as to cause the least amount of mechanical fractures. The bedrock cores were boxed in vertical succession in an appropriately sized core box. Increasing

depths were aligned left to right, and all bedrock core runs were separated, and core depths marked utilizing wooden blocks. All cores have been stored on-Site.

Prior to the installation of bedrock monitoring wells, the core hole was reamed to a 6" diameter and was flushed to remove all residual bedrock cuttings and measured to confirm final depth. Once the final depth was determined and approved by field geologist/project team, well installation was initiated. Well screen and sump intervals were reviewed and approved by the project team. The sand pack was completed to a depth of at least two feet above the top of screen. Above the sand pack, one foot of bentonite chips was installed using a dry tremie (slow pour) method; bentonite chips were then allowed to hydrate. Above the bentonite chips, a temporary tremie pipe was installed between the outside of the PVC well riser and the inside of the temporary sonic-rig casing to the top of the bentonite chip layer (well seal). Bentonite cement grout was pumped through the pipe until undiluted grout return was noted at depth of approximately one foot below the top of the ground surface. The temporary sonic-rig casing was then gradually withdrawn, and the tremie pipe was disconnected from the grout pump without removing it from the bottom of the borehole. The mini-sonic temporary casing sections were then withdrawn one at a time. The tremie pipe was then re-connected and additional grout was pumped until grout return was again observed. This procedure was repeated for each temporary mini-sonic casing section until all sections were withdrawn from the boring. Additional grout was pumped through the tremie pipe if necessary, to achieve and maintain undiluted grout to a depth at or near one foot below the ground surface.

Monitoring wells were installed to analyze identified site-specific constituent of concern concentrations and mobility in ground water across the site. All monitoring wells were constructed from threaded two-inch diameter PVC riser with a 0.010 slot stainless steel screen, and a secure bottom cap. Wells were finished with a shale trap and at least a two-foot sump at the bottom of the screen if DNAPL impacts were noted and/or suspected in the uncased borehole. The filter pack surrounding the screen was sized appropriately for the screen slot size (#5 sand). The annular seal material used was hydrated bentonite chips and bentonite slurry (grout/cement). The top of the PVC riser/casing extend approximately 3ft above ground surface and was covered with a steel protective casing. The steel protective cover was finished with a 24" by 24" by 4" thick concrete pad. All monitoring well construction data was recorded on a monitoring well construction log and is summarized in Table 2 and is presented in Appendix A.

Monitoring well development was completed no less than 48 hours after each well was constructed, allowing the bentonite-cement grout to fully cure. Well development was completed by surging the well with a submersible pump. Wells that produced sufficient water were purged until there was no visible sediment when surged. Wells that did not produce sufficient water were surged and purged dry, allowed to recovery, and then purged again. In either case, it was attempted to purge a greater amount of water from the well than was lost during rock coring.

3.2.2 Groundwater Monitoring Well Sampling

Groundwater monitoring was conducted to investigate the groundwater impacts across the Site. Since October 2011, six (6) groundwater monitoring sampling events have taken place at the Site. Routine (quarterly) groundwater monitoring at the Site ceased in late 2012, until the DNAPL Recovery System (see section 3.3.2) was in full operation. Groundwater monitoring activities resumed in July 2015, and then once again in March-April 2018.

In order to establish a thorough dataset to evaluate groundwater conditions, Arcadis began to conduct quarterly groundwater monitoring events beginning in April 2010. In addition to conducting groundwater sampling events once every quarter, Arcadis performed an initial collection of groundwater samples immediately after a monitoring well had been installed. Low-flow groundwater collection procedures and methodologies have been implemented at the Site during the quarterly sampling events in accordance with the IDEM, Office of Land Quality (OLQ), Technical Memorandum (January 8, 2003). Prior to November 2008, bailer sampling methodologies were typically used during sampling events; however, subsequent purging and sampling events have been performed using a combination of low flow via submersible pumps and bailer sampling methodologies. In instances where less than three feet of water column was available for sampling, all sample constituents were collected via bailer, with minimal purging, in order to obtain a sufficient volume of water for sample analysis. The following table summarizes these events.

Date	Sampling Rationale	# of Wells Sampled	Sampling Type
Nov. / Dec. 2011	Quarterly, Pre Abandonment	69	Low Flow and Bailer
Apr. / May 2012	Quarterly, Post Installation	55	Low Flow
Jul. 2012	Quarterly	63	Low Flow and Bailer
Oct. 2012	Quarterly	55	Low Flow
Jul. 2015	Post DNAPL Recovery System	86	Low Flow and Bailer
Mar. / Apr 2018	IDEM Recommendation	80	Low Flow and Bailer

The sampling procedure consists of initially measuring the depth to water in each monitoring well using an audible electronic water level indicator. Groundwater elevation data obtained during these sampling events, as well as historical groundwater elevation data previously collected, is presented in Table 3. Using a submersible variable rate pump, groundwater was pumped from the formation while continually gauging the static water level in the monitor well using an electronic water level indicator. Pumping rates were reduced and maintained as necessary to ensure that the water level in the well did not drop and that purging, and sampling activities yield data that was representative of the formation. Pumping rates ideally ranged between 200-400ml/min, depending on well yield. Using a flow-through cell, water quality information including pH, temperature, specific conductance, oxidation/reduction potential (ORP), dissolved oxygen (DO), and turbidity, was continuously monitored and recorded every two minutes until readings become stable, or the maximum purge limit of 18 minutes had been reached. Readings were considered stable when all parameter readings were within 10% of each other, for three consecutive readings.

Groundwater samples were containerized with minimal headspace, sealed using a Teflon®-lined cap, placed in an ice-packed cooler, and shipped to Accutest Laboratories in Orlando FL, using appropriate chain-of-custody documentation. Groundwater samples analyzed for the following constituents: benzene, toluene, ethylbenzene, and xylenes (BTEX), semi volatile organic compounds (SVOCs), and total; and dissolved metals. Analytical results can be found in Table 4 (BTEX and Metals), Table 5 (SVOCs), and Appendix B.

Reusable equipment (non-dedicated equipment) was decontaminated between sampling in a clean plastic five-gallon bucket with a non-residue detergent/distilled water solution. A separate five-gallon bucket was filled with distilled or laboratory prepared deionized water and utilized as the rinse water. The submersible centrifugal pumps were decontaminated by placing the pump and wiring in the

detergent/water mixture, energizing the pump, and allowing it to run for 2 minutes re-circulating the wash water. This process was then repeated using the rinse water.

When Arcadis conducts monitoring groundwater events, we utilize a Level IV Quality Assurance and Quality Control QA/QC during laboratory analyses. For every twenty groundwater samples collected from the monitoring wells and submitted for laboratory analysis, one field blank sample and one duplicate sample will be collected and submitted for the appropriate analyses. These samples will serve as QA/QC samples.

3.2.3 Monitoring Well Abandonment

Sixteen (16) groundwater monitoring wells have been abandoned at the Site since October 2011. The rationale behind the monitoring well abandonment includes the following: proximity to an excavation area, damaged beyond repair, improper construction, non-detect for 8 consecutive quarters, and/or location on residential property.

A total of eight (8) monitoring wells were abandoned in December 2011, in preparation for excavation activities at the site. These monitoring wells include: MW-2S, MW-2D, MW-4S, MW-4D, MW-13, MW-14S, MW-14D, AND MW-P3. Two (2) additional monitoring wells were abandoned in December 2011, due to damage or improper well installation. These wells include: MW-1S AND MW-11S. Three (3) monitoring wells located on residential property, all exhibiting non-detect concentrations for a period of eight (8) quarters, were abandoned in July 2013. These wells included: MW-33A, MW-33B, AND MW-33C. One monitoring well (MW-49C) was abandoned in July 2015, due to being damaged beyond repair. Two (2) additional monitoring wells were abandoned in July 2017, due to the installation of a new sewer line. These wells include: MW-49A and MW-49B. All monitoring wells were properly abandoned by a licensed driller in accordance with IAC31213-10-2, and well abandonment records were provided to the IDEM post abandonment.

3.3 Remedial Action

3.3.1 Recovery Well Installation

Twelve (12) recovery wells (RW-8 through RW-19) have been installed at the Site since October 2011. RW-8 was installed in April 2012, near the southwestern corner of the Site, along the western property line, due to the presence of DNAPL at two off-site monitoring well locations (MW-48A and MW-51A), located directly to the west (Figure 3). Due to the amount of DNAPL initially observed and recovered at RW-8 (Table 6), three additional recovery wells (RW-9 though RW-11) were installed near the same area of the Site in October 2012 (Figure 2).

Refer to section 3.2.1 for the initial bedrock drilling and well completion process. These four recovery wells (RW-8 through RW-11) were installed approximately five (5) feet into the Borden siltstone with a modified, open borehole design. Upon reaming the borehole to a final diameter of 6 inches, and after suspended sediments had been flushed out; approximately 3 gallons of cement grout slurry were tremie grouted to the bottom of the borehole. Once the cement grout slurry had been tremie grouted in place, 4-inch diameter, stainless steel well material was inserted into the borehole. The stainless-steel well material included the following: 4-foot-long sump at the bottom of the well, 10-foot-long section of 0.010

slot well screen, and riser pipe to the surface. The pre-determined amount of cement grout slurry was used to hold the bottom section of the stainless-steel well material in place, thus eliminating the use of a shale trap. The middle and upper sections of the stainless-steel well material were stabilized by the use of two K-packers, which fit around the 4-inch well material, and flared out to a diameter of 6 inches; thus, creating a seal against the borehole wall. No sand pack, bentonite, or any additional grout was added to the well; thus, maintaining the open borehole construction. The stainless-steel well material was added to continually maintain well and sump access, due to prior instances of PVC well material becoming compromised when subject to prolonged DNAPL exposure.

Beginning in May 2013, a Pilot Hole program was initiated, to potentially reduce the costs associated with installing additional recovery wells across the Site. Eleven (11) pilot holes (PH-1 though PH-11) were installed across the southern tract of the Site. The pilot holes were installed as a study to evaluate and analyze the rate of DNAPL accumulation, recharge and/or recovery at certain locations across the Site, without incurring the additional costs of having to install a fully functional recovery well. Bedrock drilling for the pilot holes was conducted utilizing a water rotary rock coring HQ diamond bit mounted on a mini-sonic rig. Pilot holes were completed with temporary 6-inch diameter casing into the top of bedrock, and HQ drill bit (3.78-inch diameter) at least 2 feet into the Borden Siltstone to allow for a natural sump, for possible DNAPL accumulation; total depths ranged from 40’ to 60’ bgs. The pilot holes were allowed to equilibrate to allow for DNAPL to collect, and for analysis. Drilling was performed using water (only) as drilling fluid. Drilling fluids (water) were recovered to the extent practicable and properly containerized for disposal.

By June 2013, six (6) of the eleven (11) pilot holes had exhibited a high rate of DNAPL accumulation and recharge. These six (6) pilot holes were converted into recovery wells: RW-12, RW-13, RW-14, RW-15, RW-16, and RW-18. During the same mobilization, the previously obstructed monitoring well MW-27A, was over drilled and converted into RW-17. MW-27A had encountered a fracture in the PVC well screen; causing sand to enter the well, prohibiting the recovery of DNAPL.

For two years, Arcadis continually monitored the five (5) remaining pilot holes at the Site. Arcadis performed DNAPL gauging events to track DNAPL accumulation, and also removed groundwater from the pilot holes in an attempt to stimulate DNAPL migration. While all of the pilot holes had exhibited some DNAPL accumulation over the prior two years, one (PH-7) exhibited the significant recharge and was converted into RW-19 in June 2015.

Recovery well construction was modified for recovery wells RW-12 through RW-19. The modifications were: final borehole diameter of 8 inches, stainless steel well material diameter of 6 inches, 10-foot-long sump installed at least 12 foot into competent Borden siltstone, and tremie grouting of ~10 gallons of concrete grout slurry.

All recovery wells were constructed with the stainless-steel riser extended approximately 3 foot above ground surface and was covered with a steel protective casing. The steel protective cover was finished with a 24” by 24” by 4” thick concrete pad. All recovery well construction data was logged on a monitoring well construction form which is provided in Appendix A and summarized in Table 2. Installation of screened recovery wells followed the same procedures as monitoring well installation.

It should be noted that in June 2013, 2-inch stainless steel well material (riser and 10 foot section of screen) was placed in RW-4 and RW-7 due to limited access to the sump after initially being installed as

open borehole recovery wells. The limited access is believed to have been a result of the displacement of the shale trap within the borehole.

Mobilization #	Date	# of Wells Drilled
1	Apr-12	1 RW
2	Oct-12	3 RW's
3	May-13	11 PH's
4	Jun-13	7 RW's
5	Oct-15	1 RW

3.3.2 DNAPL Recovery System Design, Construction & Operation

In November 2011, manual DNAPL recovery was halted to reduce DNAPL (creosote) exposure to field staff and the general public. CSX requested Arcadis to design a system to reduce DNAPL exposure during recovery events. The reduced exposure DNAPL recovery system began its design phase in December 2011.

Arcadis designed, constructed, tested, and implemented a portable DNAPL remedial system that drastically minimizes the exposure to free phase creosote and creosote vapors to ARCADIS field staff and to the general public; this enhanced DNAPL recovery system began initial operations in May 2012. The remedial system developed is an enclosed process known as the Enhanced DNAPL Recovery System. Prior to November 2011, DNAPL at the site had been recovered utilizing the manual bailing technique; this manual method had become extremely unpleasant and unsightly. With the addition of several recovery wells across the Site, Arcadis field staff were being exposed to, and manually removing, an increased amount of creosote during each removal event.

Safety Data Sheets (SDSs) indicated there should be minimal risk associated from exposure to the residual free product creosote. Also, real-time air quality monitoring was conducted by the Indianapolis office using the PDR Data RAM 1000 (for PAHs), a photoionization detector [(PID) for VOCs], and a Chip Measurement System (CMS) (for benzene) during a routine manual DNAPL bailing event. All results from the real-time monitoring indicated the concentrations were below any action level. However, it was noted that ARCADIS field staff were complaining about the adverse effects felt during and/or after manually bailing creosote from monitoring wells and/or recovery wells at the former creosoting facility. These adverse effects included the development of headaches from exposure to creosote vapors, and the development of chemical burns from dermal exposure to creosote coming in contact with the epidermis. In addition to the project challenge of the recovery of free product creosote, the task was further complicated because the Site and some of the recovery wells/monitoring wells are located immediately adjacent to the City of Bloomington's Rails-to-Trails and B-Line Trail, with the public observing and being exposed to the DNAPL recovery activities.

The final Enhanced DNAPL Recovery System design utilizes a diesel powered utility vehicle, industrial sized pull cart, mobile air compressor, gas powered generator, dedicated ¾" stainless steel piping air lift assembly for each well, nylon tubing for creosote discharge, ¾" hose reel for air discharge, vapor proof wellhead assembly, vapor collection system, six (6) 15 gallon drums, an echo pod that digitally displays the total gallons removed, and solenoids that can shut down the system automatically. The system is easily assembled and disassembled through a series of quick connects/disconnects and/or shark bite compression fitting connections. The portable Enhanced DNAPL Recovery System has also changed

recovery operations from manual bailer recovery in Modified Level C Personal Protective Equipment (PPE) – Respirator not required (Chemical suits and gloves) to normal Level D PPE.

Active recovery began in May 2012, starting with recovery well RW-8 and monitoring well MW-21D. Since May 2012, sixteen (16) additional recovery and/or monitoring wells containing DNAPL were equipped to support the DNAPL recovery system. Initially, the enhanced DNAPL recovery system was controlled and operated by a QED pulse pump and control assembly. In April 2013, a ¾" stainless steel piping air lift assembly was installed in RW-10 as a pilot test, to evaluate the operation, effectiveness, and maintenance required as a secondary option for DNAPL recovery techniques. During the pilot study at RW-10, it was noted that the air lift system was more efficient, easier to operate, and required less maintenance when compared to the QED pulse pump operations. Throughout 2013, wells containing the QED pulse pumps were transitioned over to the stainless-steel air lift assembly. Wells currently equipped for DNAPL recovery include: MW-21D, MW-24A, MW-51A (still has QED pulse pump), MW-54A, RW-2, RW-3, RW-4, RW-5, RW-7, RW-8, RW-9, RW-10, RW-12, RW-13, RW-14, RW-15, RW-17, AND RW-18. See Table 6 for DNAPL recovery data since November 2011.

Once all connections are in place, and air flow is applied to the air lift system, DNAPL is forced up the stainless-steel piping system toward the wellhead. At the well head, the stainless-steel piping is equipped with a ¾" brass, female quick connect fitting. From the quick connect at the well head, there is a ¾" nylon hose, fully equipped with a ¾" brass, male quick connect fitting and a brass check valve (to prevent backflow into the well). At the opposite end of the ¾" nylon hose is another brass, male quick connect fitting; which connects to a steel, 15-gallon drum, equipped with a ¾" brass, female quick connect fitting, allowing the DNAPL to enter the drum. The 15-gallon drum also contains a port for vapor to be transported to the vapor collection system (carbon filters), and a port for the echo pod connection. The drums (6) are staged within the garden trailer, being pulled behind the utility vehicle. The echo pod and solenoids (located on the hose reel and vapor collection system) have been engineered to stop air flow to the well once a level of twelve (12) gallons has been achieved within a given drum; although field staff are instructed only remove a certain amount from each location and/or until 10 gallons have been recovered per drum.

Once DNAPL removal has been completed, the 15-gallon drums of DNAPL are transported back to one of two DNAPL storage areas (Figure 6). There, the contents of the 15-gallon drums from are transferred by diaphragm pump into dedicated fifty-five (55) gallon drums for each well. The same type of quick connect assembly is used between the 15-gallon drums, the diaphragm pump, and the 55-gallon drums; as was used when at the well head. The Site was considered a large quantity generator (LQG) per the Resource Conservation and Recovery Act (RCRA) from July 23, 2013 through August 25, 2017; therefore, each fifty-five (55) gallon drum containing DNAPL was removed prior to its 90-day storage limit. On February 20, 2017, Arcadis and CSX petitioned the IDEM to change the Site's generator status from LQG to Small Quantity Generator (SQG). On August 25, 2017, IDEM approved the change in generator status to SQG.

A detailed DNAPL creosote monitoring and recovery program has been implemented at the site, utilizing the enhanced DNAPL recovery system. The program monitors 40 wells on a quarterly basis with some wells more or less often depending on the measured thickness. To date, DNAPL creosote has been detected in 32 monitoring or recovery wells both on-site and off-site. Of those 32 wells, 18 have been retrofitted for product removal, using the DNAPL recovery system. Over 7,400 gallons of DNAPL/water

mixture have been recovered since the inception of the enhanced DNAPL recovery system in April 2012, through December 7, 2018; with over 2,500 gallons recovered from one location (RW-8). See Table 6 for all historical DNAPL recovery values. Just under 10,000 gallons of DNAPL/water mixture have been recovered since August 2000. See Appendix C for DNAPL waste disposal documentation. Prior to each drum's disposal; each drum is gauged to assist with DNAPL removal volumes and calculations.

3.3.3 Pilot Hole Abandonment

Eleven (11) pilot holes were completed in May 2013. Pilot holes were completed with temporary 6" diameter casing into the top of bedrock, and HQ drill bit (3.78" diameter) at least 2 feet into the Borden Siltstone to allow for a natural sump, for possible DNAPL accumulation. The pilot holes were allowed to set and equilibrate to allow for DNAPL to collect and for analysis. Four (4) pilot holes were abandoned on October 20, 2015 (PH-1, PH-3, PH-9, and PH-11), after exhibiting minimal DNAPL accumulation and recharge. All pilot holes were properly abandoned by a licensed driller in accordance with IAC31213-10-2, and well abandonment records were provided to the Indiana Department of Environmental Management (IDEM) post abandonment. The other seven (7) pilot holes were previously completed into recovery wells, as noted in section 3.3.1.

3.3.4 Soil Excavations (Creosote Bleeds, Surface Soils, Benzo(a)pyrene Areas)

CSX and Arcadis conducted voluntary excavations of onsite creosote bleeds, impacted surface soils, and areas with elevated benzo(a)pyrene levels at the Site, from December 2011 through October 2013 (Figure 4). The creosote bleed soils and impacted surface soils at the Site were due to the past operations of the former Indiana Creosoting Company that operated from the early 1900s to 1976. The elevated benzo(a)pyrene areas were identified following a limited risk assessment (section 3.1.1) on behalf of CSX. Excavations were conducted at twenty (20) different areas across the Northern and Southern tracts of the Site.

Prior to implementation of excavation and/or construction activities, Arcadis conducted waste characterization investigations in 2007 and 2013 on the surface and subsurface soils within the twenty (20) areas of interest. All results analyzed for toxicity characteristic leaching procedure (TCLP) were classified as non-hazardous. See section 3.4.1 for permitting.

A total of 9,051.69 tons of creosote bleed soils, impacted surface soils, and soil boring locations (surface soil) with elevated levels of benzo(a)pyrene were excavated from areas of interest across the northern and southern tracts, and disposed off-site at Twin Bridges RDF Waste Management Subtitle D facility located in Danville, Indiana (Appendix C). Excavation depths ranged from 2 feet bgs to 5 feet bgs, depending on the interest area (Figure 4).

3.3.4.1 Confirmation Sampling

Following the excavations, a total of 36 subsurface soil confirmation samples were collected across the eight (8) areas of interest (on-site creosote bleeds & impacted surface soils) excavated from late 2011 to early 2012, prior to the backfilling of each excavation area. The soil confirmation samples were analyzed for Metals (Arsenic and Lead) US EPA SW-846 Method 6010; Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) SW-846 Method 8260; and SVOCs US EPA SW-846 Method 8270. Confirmation

samples were collected across the bottom extents of each excavation area; the depths of which ranged from 2 feet to 5 feet below pre-excavation ground surface.

No BTEX or Metals concentrations were detected above Tier II Industrial IDEM VRP cleanup goals in the subsurface soil confirmation samples submitted for laboratory analysis. SVOC concentrations were detected in 2 of the 36 subsurface soil samples above the Tier II Industrial IDEM VRP cleanup goals (Area-J-CS-3 and Area-J-CS-4). These subsurface soil confirmation samples were collected in excavation Area J, along the unpaved road, and former rail bed, which runs north to south through the northern tract of the Site. Sample Area-J-CS-3 was above the Tier II Industrial IDEM VRP cleanup goals for: Carbazole, 2-Methylnaphthalene, and Phenanthrene. Sample Area-J-CS-4 was above the Tier II Industrial IDEM VRP cleanup goals for: Carbazole, Dibenzofuran, 2-Methylnaphthalene, and Phenanthrene.

An additional eleven (11) confirmation samples were collected across the eleven (11) benzo(a)pyrene areas of interest, excavated in late 2013, prior to the backfilling of each excavation area. The soil confirmation samples were analyzed for SVOCs US EPA SW-846 Method 8270, benzo(a)pyrene only. No benzo(a)pyrene concentrations were detected above Tier II Industrial IDEM VRP cleanup goals in the surface soil confirmation samples submitted for laboratory analysis. Refer to the HHRA for additional rationale on the additional excavations of the eleven (11) benzo(a)pyrene areas.

3.3.4.2 Backfilling

Following confirmation sampling, excavation areas were backfilled with clay, sand, and/or stone to match pre-excavation surface materials and contours. Sand was utilized as backfill on the excavations completed on the southern tract of property due to inaccessibility of a clay source at the time of backfilling. Stone was utilized as backfill, in a mixture with clay, to help stabilize excavation areas on the northern tract where surface waters from heavy rainfall events combined with ground water infiltration.

3.3.4.3 Interim Restoration

Following backfilling, areas of the Site disturbed during excavation activities were stabilized with straw matting and/or loose straw for erosion control. Due to the saturation levels of Site soils and backfill, the excavation areas were allowed to settle during the spring and summer of 2012. These excavation areas were fully restored during the fall of 2012, which included grading to match pre-existing contours, placing of topsoil and re-vegetating with IDNR approved native herbaceous seed mixtures and planting 91 approved hardwood tree species (non-wetlands vs. wetlands).

3.3.4.4 Monitoring

From December 13th, 2011, through December 19th, 2011, and from January 11th, 2012, through February 8th, 2012, Arcadis conducted air monitoring activities at the Site; during excavations of creosote contaminated soils located on the Northern and Southern transects of the Site.

Air monitoring was performed during remediation activities which disturbed contaminated soil or other materials. Monitoring was performed using portable direct-reading instrumentation, and collection of ambient samples for laboratory analysis. The purpose of the monitoring was to quantitatively measure concentrations of chemicals of concern and particulate emissions and determine if measured

concentrations were in excess of applicable action levels. The monitoring was also used to document that engineering controls were effective in controlling creosote-related emissions during soil and sediment handling operations. The air monitoring was performed around the perimeter of the Site, inside the remediation work zone, and also included personal air monitoring to measure worker exposures to contaminants of concern.

Based on the Site contaminant, the target analytes for the air monitoring were the volatile and particulate-phase constituents of creosote as well as particulate matter potentially generated during soil excavation and handling operations on-site. The air monitoring included a combination of real-time field monitoring using portable equipment, and analytical sampling for submission for laboratory analysis. Target analytes included: Coal Tar Pitch Volatiles (CTPVs), Particulate Matter (PM10, respirable particulate), VOCs, and PAHs.

3.3.4.5 Perimeter Monitoring

The perimeter air monitoring included the following constituents:

- **Particulates:** Real-time monitoring for particulate matter was performed at each site perimeter location for the duration of each work shift. Monitoring was performed using a calibrated, portable TSI Sidepak AM510 Personal Aerosol Monitor (AM510). The monitors were equipped to collect respirable particulate 10 microns or less in size. The monitors collected data at a one-minute (or less) interval, which were recorded for the full shift. Data from each monitor was downloaded at the end of each shift and reviewed to determine if respirable particulate levels were acceptable.

- **PAHs:** Ambient air samples were collected each shift from each site perimeter location for analysis for PAHs by NIOSH Method 5506. Samples were collected using a calibrated sampling pump using laboratory recommended procedures and media. Sampling media was submitted to Galson Laboratories in East Syracuse, New York, initially for 24-hour turnaround time.

- **VOCs:** Real-time monitoring for VOCs was performed at each site perimeter location for the duration of each shift. VOC monitoring was performed using a calibrated RAE Systems, Inc. PID such as the RAE Systems MultiRAE Plus and AreaRAE PID. The meters were formatted to record data at a one-minute interval and log the data for download at the end of the shift. Data was reported as total VOCs.

3.3.4.6 Remediation Work Zone Air Monitoring

Work area air monitoring was performed daily for the duration of each shift. The monitoring was performed in the direct vicinity of remediation activities which disturbed contaminated soil or other materials. The work area air monitoring included the following constituents:

- **Particulates:** Real-time monitoring for particulate matter was performed at each site perimeter location for the duration of each work shift. Monitoring was performed using a calibrated, portable TSI Sidepak AM510 Personal Aerosol Monitor (AM510). The monitors were equipped to collect respirable particulate 10 microns or less in size. The monitors collected data at a one-minute (or less) interval, which were recorded for the full shift. Data from each monitor was downloaded at the end of each shift and reviewed to determine if respirable particulate levels were acceptable.

- **VOCs:** Real-time monitoring for VOCs was performed at each site perimeter location for the duration of each shift. VOC monitoring was performed using a calibrated RAE Systems, Inc. PID such as the RAE Systems MultiRAE Plus and AreaRAE PID. The meters were formatted to record data at a one-minute interval and log the data for download at the end of the shift. Data was reported as total VOCs.

3.3.4.7 Personal Air Monitoring (Exposure Assessment)

Personal air monitoring was performed on selected employees performing remediation activities on a daily basis. Workers considered to have the greatest exposures participated in this monitoring. Monitoring was limited to one or two workers in each area of interest per day. The purpose of the monitoring was to document worker exposures as compared to the Occupational Safety and Health Administration's (OSHA) Permissible Exposure Levels (PELs) for the particulate and chemical constituents of concern. Results of personal samples were compared to applicable OSHA exposure limits. Personal air samples were collected for analysis for the following: Particulate Matter (respirable) NIOSH 0600 and Coal Tar Pitch Volatiles (OSHA 58).

Samples were collected using calibrated sample pumps using laboratory-recommended procedures. Sampling media was submitted to Galson Laboratories in East Syracuse, New York, initially for 24-hour turnaround time.

- **Air Monitoring Results:**

  Respirables (personal air monitoring): All samples collected for the northern tract and southern tract excavations were below the action limit of 3.0 mg/m^3.

  CTPVs (personal air monitoring): All samples collected for the northern tract and southern tract excavations were below the action limit of 0.2 mg/m^3.

  PAHs (perimeter air monitoring): All samples collected for the northern tract and southern tract excavations were below the action limits for the constituents of concern.

  VOCs (perimeter air monitoring): Two monitoring locations on the southern tract sustained readings greater than the action limit of 0.5 ppm for longer than 5 minutes; these locations were the Work Area W Perimeter, collected on 12/14/2011 (this location was set too close to excavation Area L, and was moved to the site perimeter at a later date), and the East Perimeter, collected on 12/15/2011. All other monitoring locations on the southern tract did not contain sustained reading above the action level for greater than 5 minutes.

  Three monitoring locations on the northern tract sustained readings greater than the action limit of 0.5 ppm for longer than 5 minutes; these locations were the South Perimeter 1, collected on 1/16/2012 and 1/19/2012 (this location was set too close to excavation Area J, and was moved to the site perimeter at a later date); the South Perimeter 2, collected on 2/6/2012, 2/7/2012, and 2/8/2012; and the Northwest Perimeter, collected on 1/16/2012. All other monitoring locations on the northern tract did not contain sustained reading above the action level for greater than 5 minutes.

  Particulates (perimeter air monitoring): All monitored daily averages were below the action limit of 0.15 mg/m^3 for the southern tract. One monitored daily average from the northern tract, collected on 2/2/2012 from the South Perimeter 2, was above the action limit of 0.15 mg/m^3.

VOCs (work area air monitoring): All monitoring locations on the southern tract did not sustain readings above the action limit of 1.0 ppm for longer than 5 minutes. One monitoring location on the northern tract sustained readings greater than action limits for longer than 5 minutes; this monitoring location was Work Area 3, collected on 1/13/2012.

Particulates (work area air monitoring): All monitored daily averages were below the action limit of 3.0 mg/m^3 for northern tract and southern tract.

3.3.5 Sediment Removal

In December 2012, sediments from two point bar areas (Area A and Area B) within Clear Creek, immediately adjacent to the site, were removed (Figure 5). The purpose of the work was to remove sediments with residual impacts from the historic creosote manufacturing operations found within Clear Creek, South of Country Club Drive. See section 3.4.1 for permitting approvals. The two sediment removal areas were dewatered with the assistance of a series of aqua dams and trash pumps; the aqua dams assisted in diverting the creek channel around the sediment removal areas, reducing the amount of water in the removal areas, creating a dry work zone. The aqua dams also assisted in retaining and impacts that mobilized during the sediment removal. The depth of sediments removed, residing atop the creek bed, ranged from six inches to three feet. Sediment removal Area A extended for approximately 270 feet, and sediment removal Area B extended for approximately 165 feet within Clear Creek. Machinery used to assist in the sediment removal activities accessed the creek from a temporary access roadway (section 3.4.4) constructed adjacent to the west bank of Clear Creek. A total of 550.29 tons of sediment were removed, dewatered, and transported to Twin Bridges RDF Waste Management Subtitle D facility located in Danville, Indiana (Appendix C), for disposal. See SLERA for sediment and water analysis.

3.3.6 Remedial Compound(s) Construction

In 2014, two temporary storage areas used for remediation activities were constructed at the Site (Figure 6). From March 2014 through April 2014, a storage compound was constructed on Lot #3 (Figure 6), located south of Country Club Drive and east of Clear Creek (eastern compound). The eastern compound consists of a 40'x40'x8' chain link fenced compound, containing a 20'x20'x4" concrete pad. The purpose of the eastern compound is for the storage of fifty-five (55) gallon drums containing characteristically hazardous classified creosote impacted groundwater that were generated from wells located east of Clear Creek. See section 3.4.1 for permitting.

From September 2014 through November 2014, a temporary storage building, and compound was constructed south of Country Club Drive, west of Clear Creek (western compound), outside of the floodplain (Figure 6). The western compound consists of an 80'x50'x8' chain link fenced compound, containing a 60'x40'x4" concrete pad, and a 36'x32' post frame building. The purpose of the western compound is for the storage of remediation equipment necessary for DNAPL removal, and for the storage of fifty-five (55) gallon drums containing characteristically hazardous classified creosote impacted groundwater that was generated from wells located west of Clear Creek. See section 3.4.1 for permitting.

3.4 Permit Applications, Submittals & Requirements

3.4.1 DNR, ACE, City of Bloomington & Monroe County

Permits were required to perform excavation and construction activities at the Site due to the planned work taking place within the Clear Creek flood plain. A total of three permits were submitted and approved prior to the implementation of the excavation of creosote bleed soils and impacted surface soils, temporary access roadway construction, drainage ditch culvert installation, removal of sediment from Clear Creek, and completion of a remediation and storage building. These permits include:

- Army Corp of Engineers (ACE) – NWP-38 Permit No. LRL-2010-358-kjs; jurisdiction over waters of the United States (Clear Creek and Site wetlands).
- Indiana Department of Environmental Management (IDEM) – 401 WQC Permit No. 2011-147-53-DDC-A; jurisdiction over Clear Creek, Clear Creek flood plain, and Site wetlands.
- Indiana Department of Natural Resources (IDNR) – Construction in a Floodway Permit No. FW-25726; jurisdiction over Clear Creek, Clear Creek flood plain, Site wetlands, and Site vegetation and wildlife.

Additional permits were required to perform the temporary roadway construction activities on the southern tract of the Site. Two permits were submitted and approved prior to the implementation of the construction of temporary access roads throughout the southern tract of property.

- Monroe County Highway Department Driveway Permit No. 2011234; jurisdiction south of Country Club Drive, west of Clear Creek.
- City of Bloomington Engineering Department Right of Way Excavation Permit No. C11-ROW-232; jurisdiction south of Country Club Drive, east of Clear Creek.

A building permit was required to construct the remediation compound on the southern tract of the Site, west of Clear Creek. One permit was submitted and approved prior to the implementation of the construction of the remediation compound building.

- Monroe County Building Department Building Permit No. 2014-0208; jurisdiction south of Country Club Drive, west of Clear Creek.

A Use Variance was petitioned for and granted by the City of Bloomington Planning Commission for the construction of a temporary outside storage area located in Lot #3, located south of Country Club Drive, and east of Clear Creek. A Variance was also petitioned for and granted by the City of Bloomington Planning Commission for the construction of an 8’ tall security fence around the temporary storage area located on Lot #3.

- City of Bloomington Board of Zoning Appeals, October 24, 2013, Petition UV/V-47-13.

A copy of the various approved permits is included as Appendix E.

3.4.2 Tree Mitigation

In order to facilitate the excavation of creosote bleed soils and impacted surface soils, trees within the Clear Creek floodplain were required to be removed. In accordance with the IDNR Construction in a Floodway Permit No. FW-25726, any trees removed at sizes greater than 10 inches diameter-at-breast-

height (DBH) were required to be replaced with approved native trees at sizes greater than 2 inches DBH at a rate of 5:1. A total of eighteen (18) trees at sizes greater than 10 inches DBH were removed as part of the soil excavation activities. Tree species removed include: green ash, American elm, black walnut, boxelder, sycamore, and cottonwood. In accordance with the Construction in a Floodway Permit No. FW-25726, these trees were to be replaced at a 5:1 ratio (90 trees), within twelve months of the project initiation (December 12, 2012). In October 2012, ninety-one (91) trees were planted within five (5) separate excavation areas (zones); see Figure 7. The native Indiana tree species planted included: red bud, tulip poplar, sugarberry, northern pecan, burr oak, swamp white oak, and chinquapin oak.

The ninety-one (91) trees were inspected twice a year since their planting, up through September 2016. In accordance with the Construction in a Floodway Permit No. FW-25726, it is required to maintain a 75% survival rate for a period of at least four (4) years after the trees have been planted. As of September 2016, the conclusion of the four-year survival period, fourteen (14) of the ninety-one (91) trees had perished; resulting in an 84.6% survival rate. Annual tree reports were submitted to the IDNR, detailing the survival rates for years: 2013, 2014, 2015, and 2016. Arcadis petitioned to discontinue the annual tree monitoring and reporting program in the 2016 annual tree report. A letter from the IDNR granting the release from any further annual monitoring requirements was received on November 20, 2017.

3.4.3 Southern Culvert Installation

In February 2012, a 24-foot-long by 36-inch diameter concrete culvert was installed within a drainage ditch leading to Clear Creek, located south of County Club Drive and east of Clear Creek (Figure 8). The Culvert was placed to allow for temporary roadway access across the drainage ditch. In accordance with Army Corp of Engineers– NWP-38 Permit No. LRL-2010-358-kjs, all materials placed in the ditch channel, around the culvert and on the surface of the crossing were composed of rock or aggregate equal to or larger than No. 1 rock per the American Association of State Highway and Transportation (AASHTO) M 43 design. Rip Rap was utilized around the surface of the culvert and for stabilization on the along the sides of the access road across the culvert. No. 53 stone was used to finish and complete the temporary access roadway. A total of 189.60 tons of stone were used in the culvert installation and temporary access roadway construction.

3.4.4 Temporary Access Roads

Following interim restoration activities at the Site, temporary access roads were constructed and/or restored to improve site access and enable continued remediation and cleanup at the Site (Figure 8). Temporary access roads were constructed from December 2011 through February 2012.

3.4.4.1 Southern Tract

Approximately 2,600 linear feet of temporary access roads were constructed on the southern tract of property to enable continued remediation and cleanup onsite that required the use of vehicles and heavy equipment for remedial activities. The gravel access roads consisted of a combination of #53 stone, #2 stone, and #4 stone, depending on the moisture content of the ground surface. The gravel access roads were constructed to an approximate width of 10 feet and to a height of no greater than four inches above existing grade. A section of the temporary access road where it crossed a wetland was required by

IDEM's 401 WQC Permit No. 2011-147-53-DDC-A to be constructed by placing crane matting in the affected area.

As mentioned in section 3.4.3, a 24-foot-long by 36-inch diameter concrete culvert was installed within an unnamed drainage ditch on the east side of Clear Creek. The temporary culvert was installed to allow for a temporary access road to span the drainage ditch, which leads to Clear Creek. This temporary access road will enable continued remediation and cleanup onsite that required the use of vehicles and heavy equipment for remedial activities.

Two (2) temporary gravel access driveways were also constructed on the southern side of Country Club Drive, at the entrance to the southern tract of the property. One driveway is located on the west side of Clear Creek, and the other driveway is located on the east side of Clear Creek. These temporary gravel driveways connect the temporary access roads within the southern tract to Country Club Drive.

The temporary access roads will be removed once remedial objectives for regulatory closures at the Site are met. If necessary, clean fill material will be used to return the disturbed areas to original grade and elevation after the removal of the temporary roadways. The affected wetland area will then be planted with a marsh-appropriate seed mixture.

3.4.4.2 Northern Tract

The historical property (access roadways) on the northern tract that were disturbed during excavation of Area J were also restored. Prior to excavation of Area J, there was a pre-existing, historical gravel access road which ran north-south through the Site. After Area J was backfilled completely, the gravel access road was reconstructed through Area J. A gravel apron was also re-constructed to allow for drive up access to the on-site conex box; the conex box has since been relocated adjacent to the western remediation compound. Gravel was also dispersed within soft spots in other areas of the pre-existing, historical gravel roadway, where dump trucks and equipment had travelled within the northern tract of property.

3.5 Other Items

3.5.1 City Culvert Repair

The City of Bloomington, Indiana, proposed to replace an existing 30-inch diameter storm water drainage culvert pipe which had fallen into disrepair. The 30-inch diameter culvert spanned approximately 235 feet in an east-west direction across the northern tract of CSX Transportation, Inc. (CSX) property, located at 240 Country Club Drive, Bloomington, Indiana; approximately 450 feet south of the northern tract entrance gate. The existing culvert began approximately 30 feet west of the CSX property boundary, and terminated on CSX property, approximately 50 feet east of Clear Creek.

The City of Bloomington was made aware that the area of the proposed culvert replacement would be conducted in an area of know soil contamination, and the Site on which the proposed project is to be conducted has been enrolled into IDEM's Voluntary Remediation Program and would thus require workers who have completed the 40-hour OSHA Hazardous Waste Operator (HAZWOPER) Training. The City of Bloomington was made aware that the ongoing site cleanup was being managed by CSX and/or its agent Arcadis, and that the culvert replacement would require close coordination with CSX and

Arcadis. The proposed culvert replacement was approved by Paul J. Kurzanski, REM (former CSX Manager Environmental Remediation) and by Steve Sharp (Arcadis Senior Project Manager) in 2011.

The City of Bloomington proposed to replace the existing culvert with a new 36-inch diameter x 246-foot-long reinforced concrete pipe along a similar alignment as the existing culvert. The new culvert was proposed to be backfilled with a 12-inch cap of compacted #53 stone and treated at each end of the pipe with riprap on geotextile. The City of Bloomington and Crider & Crider (contractor) stated that their plans called for that the bottom of the replacement culvert shall be the same as the pre-existing culvert; and that the replacement culvert shall be constructed with a slope -1.22° under CSX property, toward Clear Creek.

3.5.1.1 Waste Characterization Samples

The proposed culvert replacement area was titled Area U; and four grid boxes were spaced evenly across Area U, within CSX property. For each grid box, there were four individual borings randomly placed and installed to six feet bgs. The soils were segregated into two depth ranges for sampling, 0-2 ft bgs and 2-6ft bgs. The proposed borings for the area closest to Clear Creek (Area U GB-4) were only completed to 2ft bgs. The soil samples were shipped to Accutest Laboratories in Orlando, Florida, and analyzed for Toxicity Characteristic Leaching Procedure (TCLP) Volatile Organic Compounds (VOCs), TCLP Semi Volatile Organic Compounds (SVOCs), and TCLP Metals. The analytical data associated with the referenced waste characterization soil samples indicate that all compounds analyzed were below laboratory detection limits. The concentrations were evaluated against the 2009 Indiana Department of Environmental Management (IDEM) Risk Integrated System of Closure (RISC) Default Residential Closure Levels.

3.5.1.2 Project Activities

Project activities began on November 7, 2011, with Crider & Crider mobilizing equipment and concrete culvert piping sections onto CSX property. On November 8, 2011, Crider & Crider began to excavate the existing storm water drainage culvert under the City of Bloomington's B-Line, to the west of the Site. The soils/debris and culvert associated with this property were staged on top of plastic sheeting, as per CSX and ARCADIS instruction, within the CSX property boundary. It was Crider & Crider's plan to install the new sections of culvert as the older sections of culvert were removed.

Prior to placing the first section of replacement culvert to the west of the B-Line, Crider & Crider reviewed the plans provided by the City of Bloomington Engineering Department; and determined that the replacement culvert shall be constructed with a slope of -1.22° under CSX property, toward Clear Creek. Crider & Crider then installed the initial culvert sections at the same level as where the bottom of where the pre-existing culvert rested, and with a slope of -1.22°, toward Clear Creek. Upon removing the pre-existing culvert near the CSX property boundary, it was noted by Arcadis field personnel, Crider & Crider, and City of Bloomington Engineering Department that the existing culvert, once installed, may be above the ground surface once it crosses onto CSX property. Arcadis project managers were notified immediately of this issue.

On November 10, 2011, Crider & Crider returns to the site and removes the remaining sections of the pre-existing culvert and continues to install new culvert sections across the CSX property; moving towards Clear Creek. Arcadis field staff notes that the newly installed culvert sections are approximately

1.0 foot above ground surface as they cross onto CSX property. Arcadis project managers were again immediately notified of this issue. Crider & Crider installed the last piece of culvert on November 12, 2011; Arcadis noted an area of contaminated soils just east of the old concrete retaining wall, near the culvert outflow. Riprap was placed around the intake and outflow of the culvert, and the per the City of Bloomington Engineering Department plans, the trench was backfilled with #53 stone, with an additional 1.0 foot of #53 stone placed atop the culvert.

3.5.1.3 Site Restoration

The City of Bloomington was required by CSX and Arcadis to restore vehicular access to the northern tract of CSX property, due to the improper planning and installation of the storm water drainage culvert across the site. In December 2011, Crider & Crider removed approximately 9 inches of gravel from atop the culvert; leaving only 3 inches of #53 stone atop the culvert. Crider & Crider then utilized the excess soil piles from the culvert replacement to construct a gentle slope away from the culvert piping on both the north and south sides of the culvert. Crider & Crider also constructed two 50'x12'x8" concrete pads over the culvert piping for CSX and Arcadis to continually access the northern tract of CSX property with heavy vehicular traffic.

3.5.2 Clear Creek Inspection Walks

Arcadis performs a walk-through of Clear Creek, which flows adjacent to the property, on a frequency of at least once per year. During the creek walk, Arcadis monitors for the presence of sheens and/or creosote bleeds emanating from the bedrock fractures along the creek bottom. The creek is inspected for the entire distance it traverses adjacent to the Site. The most recent creek walk was completed on July 27, 2018. No sheens have been observed during these inspections.

3.5.3 Public Open House

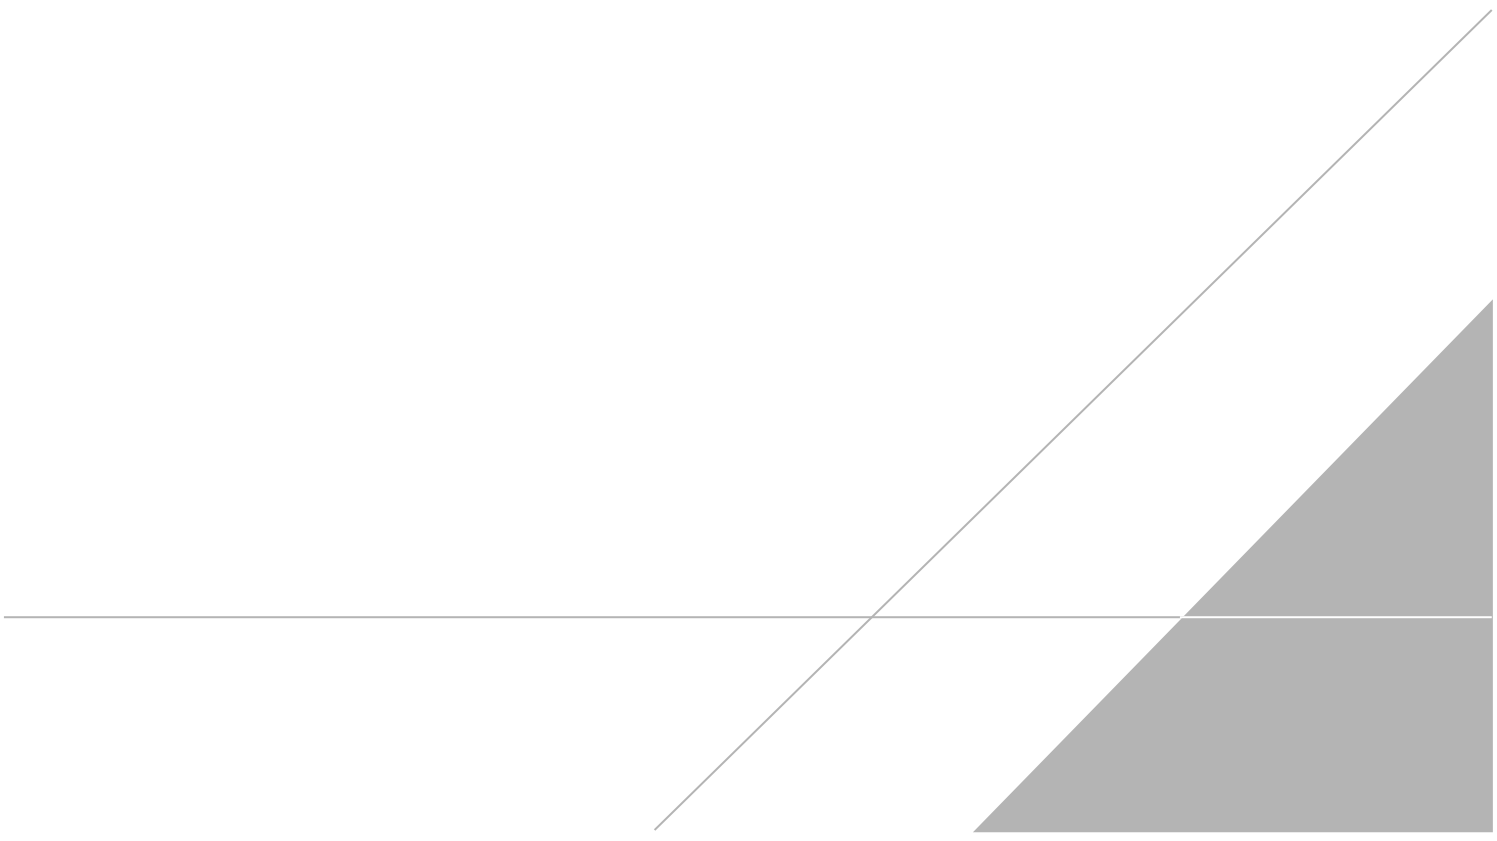
In November 2011, Arcadis developed a Community Relations Plan (CRP). The purpose of the CRP was to outline the program that CXS and Arcadis implemented to communicate with the community, government officials, and other interested parties to keep them informed about site activities during the VRP process. The CRP also seeks to increase community awareness and understanding of site activities and outline opportunities for public input in the process.

On December 7, 2011, CSX and Arcadis conducted a public open house meeting at Lora L. Batchelor Middle School. The purpose of the public open house was to inform the public of a large soil removal project in the near future at the Site (see section 3.3.4); and that CSX and Arcadis would be monitoring the Site continuously to ensure public safety.

3.5.4 Waste Management

Under the management of Arcadis, CSX has generated several waste streams at the Site since October 2011. Waste stream classifications include: hazardous, non-hazardous, and recyclables. Below is a list of waste streams, noting their final destination and amounts generated through December 2018:

- Soil: WM-Twin Bridges Landfill, Danville, IN, Non-Hazardous - 9,051.69 tons.



- Sediment: WM-Twin Bridges Landfill, Danville, IN, Non-Hazardous - 530.54 tons.
- Drilling and Purge Water: WM-Twin Bridges Landfill, Danville, IN, Non-Hazardous - 84.01 tons.
- Drill Cuttings: WM-Twin Bridges Landfill, Danville, IN, Non-Hazardous - 13.59 tons.
- DNAPL and Water Mixture: WM-Model City, NY/Ross-Grafton, OH; Hazardous - 7,650 gallons.
- DNAPL and Soil/Rock Mixture: WM-Model City, NY; Hazardous – ~1.45 tons.
- PPE/Trash/Debris: Heritage, WM-Twin Bridges Danville, IN/Ross-Grafton, OH; Non-Hazardous - 1.73 tons.
- Creosote Impacted Solids/Bulk Debris: WM-Twin Bridges Landfill, Danville, IN Non-Hazardous, - 9.98 tons.
- General Trash and Debris: WM-Twin Bridges Landfill, Danville, IN, Non-Hazardous - 12.31 tons.
- Railroad Cross Ties: CSX Hawthorne Yard, Indianapolis, IN, Recycled - 25 railroad ties.
- Tires: Grooms Tire Recycling, Indianapolis, IN, Recycled - 11 tires.
- Scrap Metal: JB Salvage, Bloomington, IN, Recycled - 0.685 tons.

4. CONCLUSION

Arcadis has prepared this Current Conditions Report, at the request of CSX for the former Indiana Creosoting Facility located at 240 Country Club Drive, Bloomington, Monroe County, Indiana. This report documents the site activities that occurred from October 2011 through December 7, 2018.

CSX, with the assistance of Arcadis, has conducted multiple investigations to limit the exposure pathways and exposure routes for the current and future use of the Site, and to reduce movement of the free product creosote on-site and off-site associated with this project. Based on the data to date, there appears to be minimal or no risk associated with the creosote impacts at the Site. CSX and Arcadis will continue to work with the IDEM to ensure there is no risk to human health and the environment from the residual creosote from the former operations of the Indiana Creosoting Company.

Notes: **Spreadsheet updated on 1/29/18 RW**
Elevations given in feet above Mean Sea Level (ft. AMSL), relative to the North American Vertical Datum of 1988 (NAVD88).
Coordinates referenced to the Indiana State Plane West (1302) grid; except decommissioned wells, which are referenced to the 1929 National Geodetic Vertical Datum (NGVD).
Coordinates and elevations for all wells surveyed by Cripe Architects and Engineers, Indianapolis, IN.
Abnd = well has been decommissioned.
SS = stainless steel. PVC = polyvinyl chloride.
ags = above ground surface.
ft/day = feet per day
TOC = top of well casing.
URC = Upper Ramp Creek LRC = Lower Ramp Creek BOR = Borden
SL = slug test average (slug in and slug out) RE = draw-down/recovery test ST = short duration step/draw-down test

Abbreviations:

AMSL = Above mean sea level.
MP = Measuring point (top of casing for wells).
NA = Not applicable.
NM = Not measured.

Notes:

1. Elevations are referenced to the North American Vertical Datum of 1988 (NAVD88).
2. Historical elevation data was recalculated based on the 2008 survey.

0.68	BOLD - Concentration exceeds 1996 IDEM VRP Tier II Default Residential Closure Levels.
770	BOLD/SHADE - Concentration exceeds 1996 IDEM VRP Tier II Default Non-residential (Industrial) Closure Levels
<	Analyte not detected above the laboratory's Run Detection Limit, displayed as ND (Non-detect) in laboratory analytical data packages.
<0.050	*Italics* - Analyte not detected above the labortory's Run Detection Limit, however Detection Limit is above VRP Closure Levels
NA	Not Analyzed
**	Lead closure levels are from the January 26, 1996 IDEM Non-rule Policy (ID# W-0048), *Guidance for Lead cleanup levels for Voluntary Remediation Program* Tier II sites.

- Creek Liner
- Pilot Hole Boring (abandoned)
- Recovery Well (Measureable DNAPL)
- Recovery Well (No Measureable DNAPL)
- Monitoring Well
- Monitoring Well (Historical DNAPL) - Sampled in 2018
- Monitoring Well (Historical Measureable DNAPL) - Sampled in 2018
- Monitoring Well (Measureable DNAPL) - Not Sampled in 2018
- Measured COC Concentration Groundwater Exceeds Industrial Closure Limits
- Measured COC Concentration Groundwater Exceeds Residential Closure Limits
- Measured COC concentrations are below Residential Cleanup Goals

NOTES:
1) In areas of tightly clustered data density, monitoring well locations have been offset for clarity.
2) Grayed out well numbers indicate well has been abandoned; analytical results from the well's last sampling event were utilized for the figure.
3) Figure reflects groundwater analytical data collected through Spring 2018.
4) All monitoring and recovery wells located north of Country Club Drive were sampled in July 2015.
5) Monitoring wells located on CSX property south of Country Club Drive, historically containing DNAPL, were not sampled in July 2015.

Monitoring Well and Construction Logs

SOIL BORING / SAMPLING LOG

Boring/Well: MW-32B & C | Project/No.: IN Creosote / IN000072.0064.00001 | Page 1 of 5

Site Location: Bloomington, Indiana

Drilling Date/Time Started: 4/9/12 0:00

Drilling Date/Time Completed: 4/10/12 0:00

Drilling Contractor: Boart Longyear

Driller: Jason Greer

Drilling Fluid Used: Water

Drilling Method: Sonic

Length and Diameter of Coring Device: 5.0' core barrel / 4"

Sampling Interval: 5.0 feet

Land-Surface Elev.: _____ feet ☐ Surveyed ☐ Estimated

Water: _____

Total Depth Drilled: _____ Feet

Hole Diameter: 4.0

Coring Device: 5.0' coring barrel

Prepared By: R. Woodruff / E. Gercke

Hammer Weight: _____

Hammer Drop: _____ ins.

Boring Termination Depth: _____

Water: _____ gallons

GPS Coordinates: _____

Sampling Data:

Depth	Grab/Composite	Time	QA/QC Samples	Laboratory Analysis
0'-2'	Grab	13:20	--	BTEX, SVOCs, Metals
6'-8'	Grab	13:25	--	BTEX, SVOCs, Metals

Boring/Well Location Sketch:

Soil Characterization:

Sample/Core Depth (Feet bls) From	To	Core Recovery (%)	OVM Reading (ppm)	Blow Counts per 6 inches		USCS Description/Depth From - To	Sample/Core Description
0.0	2.0	100	0.0	--		0.0' - 0.75'	**Topsoil,** organics; medium to dark brown
2.0	4.0	100	0.0	--		0.75' - 5.50'	**Clay,** reddish brown, gravels with weathered bedrock fragments, soft, slightly plastic; bedrock
4.0	6.0	100	0.0	--			fragments absent after 2.0', pebbles starting at 2.0'
6.0	8.0	100	0.0	--		5.50'- 6.25'	**Weathered Limestone Fragments**
8.0	10.0	100	0.0	--		6.25' - 8.00'	**Silty Clay,** medium brownish grey, soft, moist, pebbles and large gravels, trace sand
						8.00' - 10.00	**Bedrock;** fractured due to sonic drilling; set temporary 6" diameter stainless steel casing at 10.0'

ROCK CORING / SAMPLING LOG

Boring/Well PH-11 Project/No. IN Creosote / IN000072.0070.00001 Page 3 of 4

Site Location: Bloomington, Indiana

Drilling Date/Time Started: 5/15/13 @ 1503

Drilling Date/Time Completed: 5/16/13 @ 1331

Drilling Contractor: Layne Christensen

Driller: Tom Devick

Drilling Fluid Used: Water

Drilling Method: Roto Sonic

Length and Diameter of Coring Device: 5.0' core barrel / 4.25", 6.25" temporary casing

Sampling Interval: 5.0 feet

Land-Surface Elev.: 694.06 feet [X] Surveyed [ ] Estimated

Water: N/A

Total Depth Drilled: 40.93 Feet

Hole Diameter: 4.0 in.

Coring Device: 5.0' sonic coring barrel

Prepared By: Meryl Stuckey

Hammer Weight: N/A

Hammer Drop: N/A ins.

Boring Termination Depth: 40.93'

Total Water Loss: 900 gallons

GPS Coordinates: N/A

Sampling Data:

Depth	Grab/Composite	Time	QA/QC Samples	Laboratory Analysis
N/A				
			--	

Boring/Well Location Sketch:

Soil Characterization:

Sample/Core Depth (Feet bls) From	To	Core Recovery (%)	RQD (%)	Minutes/ Run	Water Loss	Sample/Core Description
						-20.82'-21.14', siltstone/mudstone, strong, dark grey competant
						-21.14'-22.39', thin interbedded siltstone
						-21.72'-22.64', vertical fracture, rough wet with minor seepage, creosote (DNAPL) present, odor, zone of water loss
						-22.25'-22.40', rock fragments, mechanically broken along vertical fracture
						-22.40'-23.00', thinly interbedded wackestone
						-24.13', fracture along styolite
						24.26'-31.75', Wackestone, strong, medium grey to dark grey, thinly interbedded siltstone/mudstone
						-26.45'-26.58', geode cluster
						-26.60'-26.70', gainstone layer
						-27.00'-30.50', increase in siltstone/mudstone
						-27.1'-27.19', grainstone layer
						-28.46', fracture along very small geodes
						-29.02'-29.23', geode
						-31.65'-31.75', grainstone layer
						31.75'-32.94', Packstone, light grey, strong, fossiliferous, moderately fractured
						-31.75', fracture along styolite
						-31.79'-31.90', fracture, partly healed, clay infill, some sand, fine to medium, some rock fragment, angular, high plasticity, damp, dark grey, zone of water loss?, slight odor
						-31.92'-32.08', mechanically fractured rock
						-32.9', healed fracture
						-32.93' BP fracture
						32.94'-39.96', Wackestone, strong, medium greyish blue with thinly interbedded siltstone/mudstone, trace geodes
						-33.32', increasing siltstone/mudstone with thinly interbedded wackestone
						-38.5'-38.85', packstone sequence
						-38.74', fracture, rough, dry
						-38.95'-39.2', grainstone sequence

4 Sample(s) and 1 Trip Blank were collected on 11/01/2011 and were received at Accutest on 11/02/2011 properly preserved, at 2.6 Deg. C and intact. These Samples received an Accutest job number of F87415. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VN2265

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87415-3MS, F87415-3MSD, F87415-3MSMSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** VN2266

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87388-1MS, F87388-1MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39314

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87492-9MS, F87492-9MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 2,4-Dimethylphenol, Carbazole are outside control limits. Probable cause due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Matrix Spike Duplicate Recovery(s) for 2,4-Dimethylphenol, 2-Methylphenol, 3&4-Methylphenol, Carbazole are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

RPD(s) for MSD for 3&4-Methylphenol, Carbazole are outside control limits for sample OP39314-MSD. Probable cause due to sample non-homogeneity.

Sample(s) OP39314-MS have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39315

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87415-5MS, F87415-5MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) Matrix Spike Duplicate Recovery(s) for Pentachlorophenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Sample OP39315-MSD has surrogates outside control limits. Probable cause is due to matrix interference.

OP39315-MSD for 2,4,6-Tribromophenol: Outside control limits.

OP39315-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39315-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39315-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39315-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39315

F87415-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F87415-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F87415-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F87415-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F87415-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F87415-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F87415-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F87415-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F87415-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F87415-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F87415-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F87415-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F87415-5 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F87415-5 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F87415-5 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F87415-5 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21665

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87385-1DUP, F87385-1MS, F87385-1MSD, F87385-1PS, F87385-1SDL, F87385-1DUP were used as the QC samples for metals.

RPD(s) for Duplicate for Arsenic are outside control limits for sample MP21665-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Lead are outside control limits for sample MP21665-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Matrix: AQ **Batch ID:** MP21667

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87423-4DUP, F87423-4MS, F87423-4MSD, F87423-4PS, F87423-4SDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21667-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job No:** F87416

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, Bloomington, IN **Report Date** 11/15/2011 5:19:18 PM

4 Sample(s) and 1 Trip Blank were collected on 11/01/2011 and were received at Accutest on 11/02/2011 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of F87416. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VN2267

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87416-2MS, F87416-2MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39314

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87492-9MS, F87492-9MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 2,4-Dimethylphenol, Carbazole are outside control limits. Probable cause due to matrix interference.Matrix Spike Duplicate Recovery(s) for 2,4-Dimethylphenol, 2-Methylphenol, 3&4-Methylphenol, Carbazole are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

RPD(s) for MSD for 3&4-Methylphenol, Carbazole are outside control limits for sample OP39314-MSD. Probable cause is due to sample non-homogeneity.

Sample(s) OP39314-MS have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39315

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87415-5MS, F87415-5MSD were used as the QC samples indicated.

Matrix Spike Recovery(s)/ Matrix Spike Duplicate Recovery(s) for Pentachlorophenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Sample(s) OP39315-MSD has surrogates outside control limits. Probable cause is due to matrix interference.

OP39315-MSD for 2,4,6-Tribromophenol: Outside control limits.

OP39315-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP39315-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39315-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39315-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F87416-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F87416-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F87416-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F87416-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39315

F87416-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F87416-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F87416-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F87416-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F87416-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F87416-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F87416-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F87416-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F87416-5 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F87416-5 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F87416-5 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F87416-5 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21667

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F87423-4DUP, F87423-4MS, F87423-4MSD, F87423-4PS, F87423-4SDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21667-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88167

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 12/12/2011 1:22:25 PM

3 Sample(s) and 1 Trip Blank were collected on 11/29/2011 and were received at Accutest on 11/30/2011 properly preserved, at 3 Deg. C and intact. These Samples received an Accutest job number of F88167. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VJ3785

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88053-1MS, F88053-1MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39620

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88169-2MS, F88169-2MSD were used as the QC samples indicated.
Matrix Spike Recovery(s) for Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.
Matrix Spike Duplicate Recovery(s) for 2,4-Dichlorophenol, 2-Methylphenol, 3&4-Methylphenol, Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Matrix Spike Recovery(s) for 2,4-Dimethylphenol, Carbazole, Dibenzofuran are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to Blank Spike.

Matrix Spike Duplicate Recovery(s) for Carbazole, Dibenzofuran are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to Blank Spike.
RPD(s) for MSD for Dibenzofuran are outside control limits for sample OP39620-MSD. Probable cause due to sample non-homogeneity.

Sample(s) OP39620-MS, OP39620-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

OP39620-MS/ MSD for Phenol-d5: Outside control limits.

OP39620-MS for Phenol: Outside control limits.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39618

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88167-4MS, F88167-4MSD were used as the QC samples indicated.

OP39618-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39618-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39618-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39618-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88167-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88167-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88167-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88167-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39618

F88167-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88167-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88167-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88167-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88167-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88167-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88167-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88167-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21808

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88201-14FDUP, F88201-14FMS, F88201-14FMSD, F88201-14FPS, F88201-14FSDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21808-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Client: CSX Transportation **Job** F88169

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 12/12/2011 1:21:12 PM

2 Sample(s) and 1 Trip Blank were collected on 11/29/2011 and were received at Accutest on 11/30/2011 properly preserved, at 2.6 Deg. C and intact. These Samples received an Accutest job number of F88169. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VB3275

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88248-4MS, F88248-4MSD were used as the QC samples indicated.

F88169-2: Dilution required due to matrix interference (non-target compounds above calibration range).

F88169-3: Dilution required due to matrix interference (non-target compounds above calibration range).

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39620

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

Sample(s) F88169-2MS, F88169-2MSD were used as the QC samples indicated.

All method blanks for this batch meet method specific criteria.

Matrix Spike Recovery(s) for Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Matrix Spike Duplicate Recovery(s) for 2,4-Dichlorophenol, 2-Methylphenol, 3&4-Methylphenol, Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Matrix Spike Recovery(s) for 2,4-Dimethylphenol, Carbazole, Dibenzofuran are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to Blank Spike.

Matrix Spike Duplicate Recovery(s) for Carbazole, Dibenzofuran are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to Blank Spike.

RPD(s) for MSD for Dibenzofuran are outside control limits for sample OP39620-MSD. Probable cause due to sample non-homogeneity.

Sample(s) OP39620-MS, OP39620-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

F88169-2: Dilution required due to matrix interference.

OP39620- MS/MSD for Phenol-d5: Outside control limits.

OP39620-MS for Phenol: Outside control limits.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39618

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88167-4MS, F88167-4MSD were used as the QC samples indicated.

Sample(s) F88169-2, F88169-3 have surrogates outside control limits. Probable cause is due to matrix interference.

OP39618-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39618-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39618-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39618-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39618

F88169-2: Dilution required due to matrix interference.

F88169-2 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88169-2 for Nitrobenzene-d5: Outside control limits due to dilution.

F88169-2 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88169-2 for Terphenyl-d14: Outside control limits due to dilution.

F88169-3 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88169-3 for Nitrobenzene-d5: Outside control limits due to dilution.

F88169-3 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88169-3 for Terphenyl-d14: Outside control limits due to dilution.

F88169-3: Dilution required due to matrix interference.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21808

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88201-14FDUP, F88201-14FMS, F88201-14FMSD, F88201-14FPS, F88201-14FSDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21808-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88629

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 12/28/2011 9:46:50 AM

2 Sample(s) and 1 Trip Blank were collected on 12/12/2011 and were received at Accutest on 12/13/2011 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of F88629. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VP178

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88629-2MS, F88629-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Ethylbenzene, Toluene, Xylene (total), are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.

Matrix Spike Duplicate Recovery(s) for Benzene, Ethylbenzene, Toluene, Xylene (total) are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39838

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88629-2MS, F88629-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 2,4-Dimethylphenol, Carbazole, Dibenzofuran are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.

Matrix Spike Duplicate Recovery(s) for 2,4-Dimethylphenol, Carbazole, Dibenzofuran are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.

Matrix Spike Recovery(s)/Matrix Spike Duplicate Recovery for Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.

Sample(s) OP39838-MS1, OP39838-MSD1 have surrogates outside control limits. Probable cause is due to matrix interference.

F88629-2: Dilution required due to high PAH levels.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39839

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88629-2MS, F88629-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Acenaphthylene, 2-Methylnaphthalene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.

Matrix Spike Duplicate Recovery(s) for 2-Methylnaphthalene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.

Matrix Spike Recovery(s) for Anthracene, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.

Matrix Spike Duplicate Recovery(s) for Anthracene, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.

Sample(s) F88629-2, F88629-3, OP39839-MS1, OP39839-MSD1 have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39839

OP39839-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
OP39839-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
OP39839-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
OP39839-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
OP39839-MS1 for 2,4,6-Tribromophenol: Outside control limits due to dilution.
OP39839-MS1 for Nitrobenzene-d5: Outside control limits due to dilution.
OP39839-MS1 for 2-Fluorobiphenyl: Outside control limits due to dilution.
OP39839-MS1 for Terphenyl-d14: Outside control limits due to dilution.
OP39839-MSD1 for 2,4,6-Tribromophenol: Outside control limits due to dilution.
OP39839-MSD1 for Nitrobenzene-d5: Outside control limits due to dilution.
OP39839-MSD1 for 2-Fluorobiphenyl: Outside control limits due to dilution.
OP39839-MSD1 for Terphenyl-d14: Outside control limits due to dilution.
F88629-2 for 2,4,6-Tribromophenol: Outside control limits due to dilution.
F88629-2 for Nitrobenzene-d5: Outside control limits due to dilution.
F88629-2 for 2-Fluorobiphenyl: Outside control limits due to dilution.
F88629-2 for Terphenyl-d14: Outside control limits due to dilution.
F88629-3 for 2,4,6-Tribromophenol: Outside control limits due to dilution.
F88629-3 for Nitrobenzene-d5: Outside control limits due to dilution.
F88629-3 for 2-Fluorobiphenyl: Outside control limits due to dilution.
F88629-3 for Terphenyl-d14: Outside control limits due to dilution.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21936

All samples were digested within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) F88629-2DUP, F88629-2MS, F88629-2MSD, F88629-2PS, F88629-2SDL were used as the QC samples for metals.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

ACCUTEST LABORATORIES SAMPLE RECEIPT CONFIRMATION

ACCUTEST'S JOB NUMBER: F88629 CLIENT: ARCADIS PROJECT: IN CREOSOTE

DATE/TIME RECEIVED: 12/13/11 9:30 {MM/DD/YY 24:00} NUMBER OF COOLERS RECEIVED: 1

METHOD OF DELIVERY: (FEDEX) UPS ACCUTEST COURIER GREYHOUND DELIVERY OTHER

AIRBILL NUMBERS: 8768 6975 2144

COOLER INFORMATION

- [ ] CUSTODY SEAL NOT PRESENT OR NOT INTACT
- [ ] CHAIN OF CUSTODY NOT RECEIVED (COC)
- [ ] ANALYSIS REQUESTED IS UNCLEAR OR MISSING
- [ ] SAMPLE DATES OR TIMES UNCLEAR OR MISSING
- [ ] TEMPERATURE CRITERIA NOT MET
- [ ] WET ICE PRESENT

TRIP BLANK INFORMATION

- [X] TRIP BLANK PROVIDED
- [ ] TRIP BLANK NOT PROVIDED
- [ ] TRIP BLANK NOT ON COC
- [X] TRIP BLANK INTACT
- [ ] TRIP BLANK NOT INTACT
- [X] RECEIVED WATER TRIP BLANK
- [ ] RECEIVED SOIL TRIP BLANK

MISC. INFORMATION

NUMBER OF ENCORES ? 25-GRAM _____ 5-GRAM _____

NUMBER OF 5035 FIELD KITS ? _____

NUMBER OF LAB FILTERED METALS ? _____

TEMPERATURE INFORMATION

- [ ] IR THERM ID #1 CORR. FACTOR +0.2
- [ ] OBSERVED TEMPS: 2.6
- [ ] CORRECTED TEMPS: 2.8

SAMPLE INFORMATION

- [ ] SAMPLE LABELS PRESENT ON ALL BOTTLES
- [X] INCORRECT NUMBER OF CONTAINERS ~~USED~~ LISTED ON COC
- [ ] SAMPLE RECEIVED IMPROPERLY PRESERVED
- [ ] INSUFFICIENT VOLUME FOR ANALYSIS
- [ ] DATES/TIMES ON COC DO NOT MATCH SAMPLE LABEL
- [X] ID'S ON COC DO NOT MATCH LABEL
- [ ] VOC VIALS HAVE HEADSPACE (MACRO BUBBLES)
- [ ] BOTTLES RECEIVED BUT ANALYSIS NOT REQUESTED
- [ ] NO BOTTLES RECEIVED FOR ANALYSIS REQUESTED
- [ ] UNCLEAR FILTERING OR COMPOSITING INSTRUCTIONS
- [ ] SAMPLE CONTAINER(S) RECEIVED BROKEN
- [ ] % SOLIDS JAR NOT RECEIVED
- [ ] 5035 FIELD KIT FROZEN WITHIN 48 HOUR'S
- [ ] RESIDUAL CHLORINE PRESENT

{APPICABLE TO EPA 600 SERIES OR NORTH CAROLINA ORGANICS}

SUMMARY OF COMMENTS: SAMPLE #3 COC ID: DUP-1 LABEL ID: DUP-2 (1 1000mL AMBER).
RECEIVED 6 CONTAINERS FOR SAMPLE #3 COC READS 7 CONTAINERS.
RECEIVED 18 CONTAINERS FOR SAMPLE #2 COC READS 21 CONTAINERS

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job No:** F88668

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, Bloomington, IN **Report Date** 12/28/2011 7:37:35 PM

3 Sample(s), 1 Trip Blank were collected on 12/13/2011 and were received at Accutest on 12/14/2011 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of F88668. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VN2301

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88668-3MS, F88668-3MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Toluene are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.

Matrix: AQ **Batch ID:** VZ117

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88779-1MS, F88779-1MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39838

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88668-3MS, F88668-3MSD were used as the QC samples indicated.

Matrix Spike Duplicate Recovery(s) for Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.

Sample(s) OP39838-MS2, OP39838-MSD2 have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39839

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88668-3MS, F88668-3MSD were used as the QC samples indicated.

OP39839-MB for 2-Fluorobiphenyl, Nitrobenzene-d5, 2,4,6-Tribromophenol, Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88668-2 for 2-Fluorobiphenyl, Nitrobenzene-d5, 2,4,6-Tribromophenol, Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88668-3 for 2-Fluorobiphenyl, Nitrobenzene-d5, 2,4,6-Tribromophenol, Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88668-4 for 2-Fluorobiphenyl, Nitrobenzene-d5, 2,4,6-Tribromophenol, Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21940

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88668-3DUP, F88668-3MS, F88668-3MSD, F88668-3PS, F88668-3SDL, F88668-3DUP were used as the QC samples for metals.

RPD(s) for Duplicate for Arsenic are outside control limits for sample MP21940-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21940-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88674

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 12/28/2011 9:48:31 AM

5 Sample(s) and 1 Trip Blank were collected on 12/13/2011 and were received at Accutest on 12/14/2011 properly preserved, at 2.6 Deg. C and intact. These Samples received an Accutest job number of F88674. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VZ112

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Sample F88674-2 has surrogates outside control limits. Probable cause is due to matrix interference.

Matrix: AQ **Batch ID:** VZ114

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88796-8MS, F88796-8MSD were used as the QC samples indicated.

Sample F88674-2 has surrogates outside control limits. Probable cause is due to matrix interference.

F88674-2 for 4-Bromofluorobenzene: Outside control limits due to matrix interference.

Matrix: AQ **Batch ID:** VZ115

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88472-1MS, F88472-1MSD were used as the QC samples indicated.

Sample F88674-2 has surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39838

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88629-2MS, F88629-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for 2,4-Dimethylphenol, Carbazole, Dibenzofuran are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.

Matrix Spike Duplicate Recovery(s) for 2,4-Dimethylphenol, Carbazole, Dibenzofuran are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.

Matrix Spike Recovery(s)/Matrix Spike Duplicate Recovery for Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.

Sample(s) OP39838-MS1, OP39838-MSD1 have surrogates outside control limits. Probable cause is due to matrix interference.

F88674-2: Dilution required due to high PAH levels.

F88674-3: Dilution required due to high PAH levels.

F88674-2 for 2-Fluorophenol: Outside control limits due to dilution.

F88674-2 for Phenol-d5: Outside control limits due to dilution.

F88674-2 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88674-2 for Nitrobenzene-d5: Outside control limits due to dilution.

F88674-2 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88674-2 for Terphenyl-d14: Outside control limits due to dilution.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39838

F88674-3 for 2-Fluorophenol: Outside control limits due to dilution.

F88674-3 for Phenol-d5: Outside control limits due to dilution.

F88674-3 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88674-3 for Nitrobenzene-d5: Outside control limits due to dilution.

F88674-3 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88674-3 for Terphenyl-d14: Outside control limits due to dilution.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39839

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88629-2MS, F88629-2MSD were used as the QC samples indicated.
Matrix Spike Recovery(s) for Acenaphthylene, 2-Methylnaphthalene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.
Matrix Spike Duplicate Recovery(s) for 2-Methylnaphthalene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to BSP.
Matrix Spike Recovery(s) for Anthracene, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.
Matrix Spike Duplicate Recovery(s) for Anthracene, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.
Sample(s) F88629-2, F88629-3, OP39839-MS1, OP39839-MSD1 have surrogates outside control limits. Probable cause is due to matrix interference.

OP39839-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39839-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39839-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39839-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP39839-MS1 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

OP39839-MS1 for Nitrobenzene-d5: Outside control limits due to dilution.

OP39839-MS1 for 2-Fluorobiphenyl: Outside control limits due to dilution.

OP39839-MS1 for Terphenyl-d14: Outside control limits due to dilution.

OP39839-MSD1 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

OP39839-MSD1 for Nitrobenzene-d5: Outside control limits due to dilution.

OP39839-MSD1 for 2-Fluorobiphenyl: Outside control limits due to dilution.

OP39839-MSD1 for Terphenyl-d14: Outside control limits due to dilution.

F88674-2 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88674-2 for Nitrobenzene-d5: Outside control limits due to dilution.

F88674-2 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88674-2 for Terphenyl-d14: Outside control limits due to dilution.

F88674-3 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88674-3 for Nitrobenzene-d5: Outside control limits due to dilution.

F88674-3 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88674-3 for Terphenyl-d14: Outside control limits due to dilution.

F88674-4 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88674-4 for Nitrobenzene-d5: Outside control limits due to dilution.

F88674-4 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88674-4 for Terphenyl-d14: Outside control limits due to dilution.

F88674-5 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88674-5 for Nitrobenzene-d5: Outside control limits due to dilution.

F88674-5 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88674-5 for Terphenyl-d14: Outside control limits due to dilution.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39839

F88674-6 for 2,4,6-Tribromophenol: Outside control limits due to dilution.

F88674-6 for Nitrobenzene-d5: Outside control limits due to dilution.

F88674-6 for 2-Fluorobiphenyl: Outside control limits due to dilution.

F88674-6 for Terphenyl-d14: Outside control limits due to dilution.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21938

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88706-1DUP, F88706-1MS, F88706-1MSD, F88706-1PS, F88706-1SDL, F88706-1DUP were used as the QC samples for metals.

RPD(s) for Duplicate for Arsenic are outside control limits for sample MP21938-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21938-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88706

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 12/23/2011 3:00:16 PM

2 Sample(s) were collected on 12/12/2011 and were received at Accutest on 12/15/2011 properly preserved, at 3.2 Deg. C and intact. These Samples received an Accutest job number of F88706. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21938

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88706-1DUP, F88706-1MS, F88706-1MSD, F88706-1PS, F88706-1SDL were used as the QC samples for metals.

RPD(s) for Duplicate for Arsenic are outside control limits for sample MP21938-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21938-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88707

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/3/2012 1:32:29 PM

5 Sample(s), 1 Trip Blank were collected on 12/14/2011 and were received at Accutest on 12/15/2011 properly preserved, at 3.2 Deg. C and intact. These Samples received an Accutest job number of F88707. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VN2303

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88707-2MS, F88707-2MSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** VN2310

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88864-21MS, F88864-21MSD were used as the QC samples indicated.

Matrix Spike Recovery(s)/ Matrix Spike Duplicate Recovery(s) for Toluene are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39860

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Sample(s) OP39860-MS have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Sample(s) F88707-5 have surrogates outside control limits. Probable cause is due to matrix interference.

OP39861-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88707-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88707-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88707-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88707-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88707-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88707-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88707-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88707-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

F88707-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F88707-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F88707-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F88707-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F88707-5 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F88707-5 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F88707-5 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F88707-5 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F88707-6 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F88707-6 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F88707-6 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F88707-6 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21953

All samples were digested within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) F88708-1DUP, F88708-1MS, F88708-1MSD, F88708-1PS, F88708-1SDL were used as the QC samples for metals.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88709

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/3/2012 11:51:24 AM

4 Sample(s), 1 Trip Blank were collected on 12/14/2011 and were received at Accutest on 12/15/2011 properly preserved, at 3.8 Deg. C and intact. These Samples received an Accutest job number of F88709. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VN2303

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88707-2MS, F88707-2MSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** VN2304

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88551-2MS, F88551-2MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39860

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Sample(s) OP39860-MS have surrogates outside control limits. Probable cause is due to matrix interference.

F88709-5: Dilution required due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

OP39861-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Sample(s) F88709-5 have surrogates outside control limits. Probable cause is due to matrix interference.

F88709-1 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88709-1 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88709-1 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88709-1 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88709-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88709-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88709-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88709-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88709-5 for Terphenyl-d14: Outside control limits due to dilution.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

F88709-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88709-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88709-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88709-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88709-5 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88709-5 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88709-5 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88709-5 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21953

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88708-1DUP, F88708-1MS, F88708-1MSD, F88708-1PS, F88708-1SDL were used as the QC samples for metals.

Matrix: AQ **Batch ID:** MP21965

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2DUP, F88710-2MS, F88710-2MSD, F88710-2PS, F88710-2SDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21965-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88710

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/3/2012 1:52:05 PM

2 Sample(s), 1 Trip Blank were collected on 12/13/2011 and were received at Accutest on 12/15/2011 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of F88710. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VZ112

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39860

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Sample(s) OP39860-MS have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

OP39861-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88710-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88710-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88710-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88710-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88710-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88710-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88710-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88710-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21965

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2DUP, F88710-2MS, F88710-2MSD, F88710-2PS, F88710-2SDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21965-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88719

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/3/2012 2:27:09 PM

5 Sample(s), 1 Trip Blank were collected on 12/14/2011 and were received at Accutest on 12/15/2011 properly preserved, at 3.8 Deg. C and intact. These Samples received an Accutest job number of F88719. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VZ117

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88779-1MS, F88779-1MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39860

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Sample(s) OP39860-MS, OP39884-MS, OP39884-MSD have surrogates outside control limits. Probable cause due to matrix interference.

Matrix: AQ **Batch ID:** OP39884

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Phenol are outside control limits. Probable cause is due to matrix interference.

Sample(s) OP39860-MS, OP39884-MS, OP39884-MSD have surrogates outside control limits. Probable cause due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

OP39861-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88719-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88719-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88719-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88719-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

F88719-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88719-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88719-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88719-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Matrix: AQ **Batch ID:** OP39885

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

OP39885-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88719-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88719-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88719-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88719-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88719-5 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88719-5 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88719-5 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88719-5 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88719-6 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88719-6 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88719-6 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88719-6 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21965

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2DUP, F88710-2MS, F88710-2MSD, F88710-2PS, F88710-2SDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21965-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Matrix: AQ **Batch ID:** MP21975

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88719-3FDUP, F88719-3FMS, F88719-3FMSD, F88719-3FPS, F88719-3FSDL were used as the QC samples for metals.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88724

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/3/2012 12:13:19 PM

4 Sample(s) were collected on 12/13/2011 and were received at Accutest on 12/14/2011 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of F88724. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VJ3803

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88571-12MS, F88571-12MSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** VN2304

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88551-2MS, F88551-2MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39860

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Sample(s) OP39860-MS have surrogates outside control limits. Probable cause is due to matrix interference.

F88724-2: Dilution required due to high PAH levels.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88710-2MS, F88710-2MSD were used as the QC samples indicated.

Sample(s) F88724-2 have surrogates outside control limits. Probable cause is due to matrix interference.

OP39861-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39861-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88724-1 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88724-1 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88724-1 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88724-1 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88724-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88724-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88724-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88724-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39861

F88724-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88724-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88724-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88724-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88724-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88724-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88724-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88724-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21972

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88713-3FDUP, F88713-3FMS, F88713-3FMSD, F88713-3FPS, F88713-3FSDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP21972-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88754

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/4/2012 11:04:37 AM

5 Sample(s), 1 Trip Blank were collected on 12/15/2011 and were received at Accutest on 12/16/2011 properly preserved, at 3.8 Deg. C and intact. These Samples received an Accutest job number of F88754. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VC3324

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

F88754-4: Dilution required due to matrix interference (non-target compounds above calibration range).

F88754-6: Dilution required due to matrix interference (non-target compounds above calibration range).

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39884

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP.

Sample(s) OP39884-MS, OP39884-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

F88754-6: Dilution required due to high PAH levels.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39885

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

Sample(s) F88754-4, F88754-5, F88754-6 have surrogates outside control limits. Probable cause is due to matrix interference.

OP39885-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88754-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88754-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39885

F88754-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88754-5 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-5 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-5 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-5 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88754-6 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-6 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-6 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-6 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21980

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88741-1FDUP, F88741-1FMS, F88741-1FMSD, F88741-1FPS, F88741-1FSDL were used as the QC samples for metals.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88760

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/4/2012 11:06:04 AM

5 Sample(s), 1 Trip Blank were collected on 12/15/2011 and were received at Accutest on 12/16/2011 properly preserved, at 3.6 Deg. C and intact. These Samples received an Accutest job number of F88760. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VC3324

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

F88760-6: Dilution required due to matrix interference (non-target compounds above calibration range).

Matrix: AQ **Batch ID:** VC3325

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88713-10MS, F88713-10MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39884

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

All method blanks for this batch meet method specific criteria.

Matrix Spike Recovery(s) for Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to BSP

Sample(s) OP39884-MS, OP39884-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

F88760-6: Dilution required due to high PAH levels.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39885

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

Sample(s) F88760-6 have surrogates outside control limits. Probable cause is due to matrix interference.

OP39885-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88754-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39885

F88754-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88754-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88754-5 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-5 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-5 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-5 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88754-6 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88754-6 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88754-6 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88754-6 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21984

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2DUP, F88763-2MS, F88763-2MSD, F88763-2PS, F88763-2SDL were used as the QC samples for metals.

RPD(s) for Duplicate for Lead are outside control limits for sample MP21984-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Arsenic, Lead are outside control limits for sample MP21984-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88763

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/5/2012 9:25:47 AM

3 Sample(s), 1 Trip Blank were collected on 12/15/2011 and were received at Accutest on 12/16/2011 properly preserved, at 3.8 Deg. C and intact. These Samples received an Accutest job number of F88763. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VC3324

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** VP189

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88788-22MS, F88788-22MSD were used as the QC samples indicated.

F88763-3: Sample was not preserved to a pH < 2; reported results are considered minimum values.

F88763-4: Sample was not preserved to a pH < 2; reported results are considered minimum values.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39884

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Phenol are outside control limits. Probable cause is due to matrix interference.

Sample(s) F88763-4, OP39884-MS, OP39884-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39885

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2MS, F88763-2MSD were used as the QC samples indicated.

OP39885-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39885-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88763-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88763-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88763-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88763-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39885

F88763-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88763-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88763-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88763-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88763-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88763-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88763-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88763-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21984

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88763-2DUP, F88763-2MS, F88763-2MSD, F88763-2PS, F88763-2SDL were used as the QC samples for metals.

RPD(s) for Duplicate for Lead are outside control limits for sample MP21984-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Arsenic, Lead are outside control limits for sample MP21984-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

F88763-3 for Lead: Elevated reporting limit(s) due to matrix interference.

F88763-4 for Lead: Elevated reporting limit(s) due to matrix interference.

Matrix: AQ **Batch ID:** MP21992

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88860-2MS, F88860-2MSD, F88860-2PS, F88860-2SDL, F88860-2DUP were used as the QC samples for metals.

RPD(s) for Duplicate for Arsenic, Lead are outside control limits for sample MP21992-D1. RPD acceptable due to low duplicate and sample concentrations.

RPD(s) for Serial Dilution for Arsenic, Lead are outside control limits for sample MP21992-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F88788

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 1/9/2012 12:51:36 PM

18 Sample(s) and 5 Trip Blank(s) were collected on 12/16/2011 and were received at Accutest on 12/17/2011 properly preserved, at 2.4 Deg. C and intact. These Samples received an Accutest job number of F88788. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VP188

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88788-14MS, F88788-14MSD were used as the QC samples indicated.

Matrix Spike/ Matrix Spike Duplicate Recovery(s) for Ethylbenzene, Xylene (total) are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.
F88788-3: Sample was not preserved to a pH < 2; reported results are considered minimum values.

Matrix: AQ **Batch ID:** VP189

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88788-22MS, F88788-22MSD were used as the QC samples indicated.

F88788-18: Sample was treated with an anti-foaming agent.

F88788-20: Sample was treated with an anti-foaming agent.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP39921

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88788-22MS, F88788-22MSD were used as the QC samples indicated.

Matrix Spike Duplicate Recovery(s) for Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Sample(s) OP39921-MS, OP39921-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

F88788-4: Dilution required due to high PAH levels.

F88788-6: Dilution required due to high PAH levels.

F88788-14: Dilution required due to high PAH levels.

F88788-18: Elevated reporting limit due to matrix interference, dilution required during sample prep.

F88788-20: Elevated reporting limit due to matrix interference, dilution required during sample prep.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39920

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F88788-22MS, F88788-22MSD were used as the QC samples indicated.

RPD(s) for MSD for Fluoranthene are outside control limits for sample OP39920-MSD. Probable cause due to sample non-homogeneity.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP39920

Sample(s) OP39920-MSD, F88788-14, F88788-4, F88788-5, F88788-6, F88788-20 have surrogates outside control limits. Surrogate recoveries corrected for actual spike amount.

OP39920-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP39920-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP39920-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP39920-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-5 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-5 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-5 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-5 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-6 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-6 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-6 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-6 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-8 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-8 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-8 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-8 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-9 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-9 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-9 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-9 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-10 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-10 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-10 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-10 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-11 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-11 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-11 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-11 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-13 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-13 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-13 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-13 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-14 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F88788-14 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F88788-14 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F88788-14 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F88788-19 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F88788-19 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F88788-19 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F88788-19 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F88788-20 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F88788-20 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F88788-20 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F88788-20 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F88788-22 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F88788-22 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F88788-22 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F88788-22 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F88788-23 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F88788-23 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F88788-23 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F88788-23 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP21999

All samples were digested within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) F88788-22DUP, F88788-22MS, F88788-22MSD, F88788-22PS, F88788-22SDL were used as the QC samples for metals.

Matrix: AQ **Batch ID:** MP22000

All samples were digested within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) F88788-22FDUP, F88788-22FMS, F88788-22FMSD, F88788-22FPS, F88788-22FSDL were used as the QC samples for metals.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F91753

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 4/17/2012 11:13:57 AM

3 Sample(s), 1 Trip Blank were collected on 04/02/2012 and were received at Accutest SE on 04/03/2012 properly preserved, at 2.8 Deg. C and intact. These Samples received an Accutest job number of F91753. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VZ253

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91753-4MS, F91753-4MSD were used as the QC samples indicated.

F91753-2: Sample was not preserved to a pH < 2; reported results are considered minimum values.

F91753-3: Sample was not preserved to a pH < 2; reported results are considered minimum values.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP41238

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91753-4MS, F91753-4MSD were used as the QC samples indicated.

Sample(s) OP41238-MS, OP41238-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41239

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91753-4MS, F91753-4MSD were used as the QC samples indicated.

OP41239-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP41239-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP41239-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP41239-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F91753-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F91753-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F91753-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F91753-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F91753-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F91753-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F91753-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F91753-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F91753-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F91753-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F91753-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F91753-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP22558

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91753-4DUP, F91753-4MS, F91753-4MSD, F91753-4PS, F91753-4SDL were used as the QC samples for metals.

Matrix: AQ **Batch ID:** MP22564

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91753-4FDUP, F91753-4FMS, F91753-4FMSD, F91753-4FPS, F91753-4FSDL were used as the QC samples for metals.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

Client: CSX Transportation **Job** F91754

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 4/18/2012 10:05:47 AM

2 Samples, 1 Trip Blank were collected on 04/02/2012 and were received at Accutest SE on 04/03/2012 properly preserved, at 2.6 Deg. C and intact. These Samples received an Accutest job number of F91754. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VN2430

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91815-17MS, F91815-17MSD were used as the QC samples indicated.

Matrix: AQ **Batch ID:** VO346

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91754-2MS, F91754-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s)/Matrix Spike Duplicate Recovery(s) for Toluene are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

F91754-2: Confirmation run.

Matrix: AQ **Batch ID:** VO348

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91845-2MS, F91845-2MSD were used as the QC samples indicated.

Matrix Spike Duplicate Recovery(s) for Benzene, Ethylbenzene, Xylene (total) are outside control limits. Probable cause due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP41254

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91754-2MS, F91754-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Carbazole, Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Sample(s) OP41254-MS, OP41254-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41255

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91754-2MS, F91754-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Acenaphthylene, Anthracene, Benzo(b)fluoranthene, Fluoranthene, Pyrene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Acenaphthylene, Anthracene, Fluoranthene, Fluorene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41255

Matrix Spike Recovery(s)/Matrix Spike Duplicate Recovery(s) for 2-Methylnaphthalene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to Blank Spike.

RPD(s) for MSD for Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Indeno(1,2,3-cd)pyrene are outside control limits for sample OP41255-MSD. Probable cause is due to sample non-homogeneity.

Sample(s) F91754-2, F91754-3, OP41255-MS, OP41255-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

OP41255-MB for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Pentachlorophenol: Spike recoveries corrected for actual spike amount.

OP41255-BS for Acenaphthene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Acenaphthylene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Anthracene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Benzo(a)anthracene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Benzo(a)pyrene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Benzo(b)fluoranthene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Benzo(g,h,i)perylene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Benzo(k)fluoranthene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Chrysene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Dibenzo(a,h)anthracene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Fluoranthene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Fluorene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Indeno(1,2,3-cd)pyrene: Spike recoveries corrected for actual spike amount.

OP41255-BS for 2-Methylnaphthalene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Naphthalene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Phenanthrene: Spike recoveries corrected for actual spike amount.

OP41255-BS for Pyrene: Spike recoveries corrected for actual spike amount.

OP41255-MS for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Outside control limits due to dilution.

OP41255-MSD for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Outside control limits due to dilution.

F91754-2 for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Outside control limits due to dilution.

F91754-3 for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Outside control limits due to dilution.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP22566

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91754-2DUP, F91754-2FDUP, F91754-2FMS, F91754-2FMSD, F91754-2FPS, F91754-2FSDL, F91754-2MS, F91754-2MSD, F91754-2PS, F91754-2SDL were used as the QC samples for metals.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F91789

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 4/18/2012 9:00:58 AM

3 Samples and 1 Trip Blank were collected on 04/03/2012 and were received at Accutest SE on 04/04/2012 properly preserved, at 3.4 Deg. C and intact. These Samples received an Accutest job number of F91789. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VN2430

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91815-17MS, F91815-17MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP41254

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91754-2MS, F91754-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Carbazole, Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Sample(s) OP41254-MS, OP41254-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41255

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91754-2MS, F91754-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Acenaphthylene, Anthracene, Benzo(b)fluoranthene, Fluoranthene, Pyrene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Acenaphthylene, Anthracene, Fluoranthene, Fluorene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Recovery(s)/Matrix Spike Duplicate Recovery(s) for 2-Methylnaphthalene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to Blank Spike.

RPD(s) for MSD for Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Indeno(1,2,3-cd)pyrene are outside control limits for sample OP41255-MSD. Probable cause is due to sample non-homogeneity.

Sample(s) OP41255-MS, OP41255-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

OP41255-MB for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Pentachlorophenol: Spike recoveries corrected for actual spike amount.

OP41255-BS for Acenaphthene: Spike recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41255

OP41255-BS for Acenaphthylene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Anthracene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(a)anthracene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(a)pyrene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(b)fluoranthene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(g,h,i)perylene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(k)fluoranthene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Chrysene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Dibenzo(a,h)anthracene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Fluoranthene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Fluorene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Indeno(1,2,3-cd)pyrene: Spike recoveries corrected for actual spike amount.
OP41255-BS for 2-Methylnaphthalene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Naphthalene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Phenanthrene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Pyrene: Spike recoveries corrected for actual spike amount.
OP41255-MS for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Outside control limits due to dilution.
OP41255-MSD for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Outside control limits due to dilution.
F91789-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F91789-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F91789-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F91789-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F91789-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F91789-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F91789-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F91789-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F91789-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F91789-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F91789-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F91789-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP22556

All samples were digested within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) F91882-1DUP, F91882-1MS, F91882-1MSD, F91882-1PS, F91882-1SDL were used as the QC samples for metals.
Matrix Spike Recovery(s)/ Matrix Spike Duplicate Recovery(s) for Arsenic are outside control limits. Spike recovery indicates possible matrix interference.
MP22556-PS1 for Arsenic: Spike recovery indicates matrix interference and/or outside control limits due to high level in sample relative to spike amount.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job** F91800

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, **Report Date** 4/18/2012 9:07:09 AM

3 Samples were collected on 04/03/2012 and were received at Accutest SE on 04/04/2012 properly preserved, at 3.2 Deg. C and intact. These Samples received an Accutest job number of F91800. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VN2430

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91815-17MS, F91815-17MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP41254

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Matrix Spike Recovery(s) for Carbazole, Phenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Sample(s) OP41254-MS, OP41254-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41255

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91754-2MS, F91754-2MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Acenaphthylene, Anthracene, Benzo(b)fluoranthene, Fluoranthene, Pyrene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Acenaphthylene, Anthracene, Fluoranthene, Fluorene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Recovery(s)/Matrix Spike Duplicate Recovery(s) for 2-Methylnaphthalene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to Blank Spike.

RPD(s) for MSD for Benzo(a)anthracene, Benzo(a)pyrene, Benzo(b)fluoranthene, Benzo(g,h,i)perylene, Benzo(k)fluoranthene, Chrysene, Dibenzo(a,h)anthracene, Indeno(1,2,3-cd)pyrene are outside control limits for sample OP41255-MSD. Probable cause is due to sample non-homogeneity.

Sample(s) OP41255-MS, OP41255-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

OP41255-MB for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP41255-BS for Pentachlorophenol: Spike recoveries corrected for actual spike amount.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41255

OP41255-BS for Acenaphthene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Acenaphthylene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Anthracene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(a)anthracene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(a)pyrene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(b)fluoranthene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(g,h,i)perylene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Benzo(k)fluoranthene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Chrysene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Dibenzo(a,h)anthracene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Fluoranthene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Fluorene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Indeno(1,2,3-cd)pyrene: Spike recoveries corrected for actual spike amount.
OP41255-BS for 2-Methylnaphthalene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Naphthalene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Phenanthrene: Spike recoveries corrected for actual spike amount.
OP41255-BS for Pyrene: Spike recoveries corrected for actual spike amount.
OP41255-MS for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Outside control limits due to dilution.
OP41255-MSD for 2,4,6-Tribromophenol, Nitrobenzene-d5, 2-Fluorobiphenyl, Terphenyl-d14: Outside control limits due to dilution.
F91800-1 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F91800-1 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F91800-1 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F91800-1 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F91800-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F91800-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F91800-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F91800-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.
F91800-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.
F91800-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.
F91800-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.
F91800-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP22558

All samples were digested within the recommended method holding time.
All samples were analyzed within the recommended method holding time.
All method blanks for this batch meet method specific criteria.
Sample(s) F91753-4DUP, F91753-4MS, F91753-4MSD, F91753-4PS, F91753-4SDL were used as the QC samples for metals.

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: CSX Transportation **Job No:** F91840

Site: AGMININD: 9415829/ENV53216, Former Indiana Creosote Co, Bloomington, IN **Report Date** 4/19/2012 4:19:24 PM

4 Samples and 1 Trip Blank were collected on 04/04/2012 and were received at Accutest SE on 04/05/2012 properly preserved, at 3.4 Deg. C and intact. These Samples received an Accutest job number of F91840. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260B

Matrix: AQ **Batch ID:** VM2369

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91840-3MS, F91840-3MSD were used as the QC samples indicated.

Extractables by GCMS By Method SW846 8270D

Matrix: AQ **Batch ID:** OP41319

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91846-7MS, F91846-7MSD were used as the QC samples indicated.

Matrix Spike Recovery(s)/ Matrix Spike Duplicate Recovery(s) for 2,4-Dimethylphenol are outside control limits. Probable cause is due to matrix interference. For method performance in a clean matrix, refer to Blank Spike.

Sample(s) F91840-2, F91840-3, OP41319-MS, OP41319-MSD have surrogates outside control limits. Probable cause is due to matrix interference.

F91840-2: Confirmed ND by re-extraction and reanalysis beyond hold-time.

F91840-3: Confirmed ND by re-extraction and reanalysis beyond hold-time.

OP41319-MSD for 2-Fluorophenol: Outside control limits due to dilution.

OP41319-MS/MSD for Phenol-d5: Outside control limits due to dilution.

Matrix: AQ **Batch ID:** OP41419

F91840-2: Confirmation run.

F91840-3: Confirmation run.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41320

All samples were extracted within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91846-7MS, F91846-7MSD were used as the QC samples indicated.

Matrix Spike Recovery(s) for Pentachlorophenol, Acenaphthylene, Anthracene, Benzo(g,h,i)perylene, Dibenzo(a,h)anthracene, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference.

Matrix Spike Duplicate Recovery(s) for Acenaphthylene, Anthracene, Benzo(g,h,i)perylene, Dibenzo(a,h)anthracene, Fluoranthene, Fluorene, Indeno(1,2,3-cd)pyrene, Phenanthrene, Pyrene are outside control limits. Probable cause is due to matrix interference.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41320

Matrix Spike Recovery(s)/Matrix Spike Duplicate Recovery(s) for Acenaphthene, 2-Methylnaphthalene, Naphthalene are outside control limits. Outside control limits due to high level in sample relative to spike amount. For method performance in a clean matrix, refer to Blank Spike.

RPD(s) for MSD for Pentachlorophenol are outside control limits for sample OP41320-MSD. Probable cause is due to sample non-homogeneity.

Sample(s) OP41320-MS, OP41320-MSD, F91840-2, F91840-3 have surrogates outside control limits. Surrogate recoveries corrected for actual spike amount. Outside control limits.

OP41320-MB for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP41320-MB for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP41320-MB for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP41320-MB for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP41320-BS for Pentachlorophenol: Spike recoveries corrected for actual spike amount.

OP41320-BS for Acenaphthene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Acenaphthylene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Anthracene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Benzo(a)anthracene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Benzo(a)pyrene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Benzo(b)fluoranthene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Benzo(g,h,i)perylene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Benzo(k)fluoranthene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Chrysene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Dibenzo(a,h)anthracene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Fluoranthene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Fluorene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Indeno(1,2,3-cd)pyrene: Spike recoveries corrected for actual spike amount.

OP41320-BS for 2-Methylnaphthalene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Naphthalene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Phenanthrene: Spike recoveries corrected for actual spike amount.

OP41320-BS for Pyrene: Spike recoveries corrected for actual spike amount.

OP41320-BS for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

OP41320-BS for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

OP41320-BS for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

OP41320-BS for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

OP41320-MS for 2,4,6-Tribromophenol: Outside control limits due to dilution.

OP41320-MS for Nitrobenzene-d5: Outside control limits due to dilution.

OP41320-MS for 2-Fluorobiphenyl: Outside control limits due to dilution.

OP41320-MS for Terphenyl-d14: Outside control limits due to dilution.

OP41320-MSD for 2,4,6-Tribromophenol: Outside control limits due to dilution.

OP41320-MSD for Nitrobenzene-d5: Outside control limits due to dilution.

OP41320-MSD for 2-Fluorobiphenyl: Outside control limits due to dilution.

OP41320-MSD for Terphenyl-d14: Outside control limits due to dilution.

F91840-2: Confirmed ND by re-extraction and reanalysis beyond hold-time.

F91840-2 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F91840-2 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F91840-2 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F91840-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F91840-2 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount. Outside control limits.

F91840-3: Confirmed ND by re-extraction and reanalysis beyond hold-time.

F91840-3 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F91840-3 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F91840-3 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F91840-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

F91840-3 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount. Outside control limits.

Extractables by GCMS By Method SW846 8270D BY SIM

Matrix: AQ **Batch ID:** OP41320

F91840-4 for 2,4,6-Tribromophenol: Surrogate recoveries corrected for actual spike amount.

F91840-4 for Nitrobenzene-d5: Surrogate recoveries corrected for actual spike amount.

F91840-4 for 2-Fluorobiphenyl: Surrogate recoveries corrected for actual spike amount.

F91840-4 for Terphenyl-d14: Surrogate recoveries corrected for actual spike amount.

Matrix: AQ **Batch ID:** OP41420

F91840-2: Confirmation run for surrogate recoveries.

F91840-3: Confirmation run for surrogate recoveries.

Metals By Method SW846 6010C

Matrix: AQ **Batch ID:** MP22564

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91753-4FDUP, F91753-4FMS, F91753-4FMSD, F91753-4FPS, F91753-4FSDL were used as the QC samples for metals.

Matrix: AQ **Batch ID:** MP22567

All samples were digested within the recommended method holding time.

All samples were analyzed within the recommended method holding time.

All method blanks for this batch meet method specific criteria.

Sample(s) F91840-5DUP, F91840-5MS, F91840-5MSD, F91840-5PS, F91840-5SDL were used as the QC samples for metals.

RPD(s) for Serial Dilution for Arsenic are outside control limits for sample MP22567-SD1. Percent difference acceptable due to low initial sample concentration (< 50 times IDL).

Accutest Laboratories Southeast (ALSE) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALSE and as stated on the COC. ALSE certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALSE Quality Manual except as noted above. This report is to be used in its entirety. ALSE is not responsible for any assumptions of data quality if partial data packages are used.
